### IMPERIAL GAZETTEER OF INDIA

#### PROVINCIAL SERIES

# UNITED PROVINCES OF AGRA AND OUDH

#### VOL. I

THE PROVINCES; RIVERS, MOUNTAINS, LAKES, CANALS,
AND HISTORIC AREAS; THE MEERUT. AGRA,
AND BARELLLY DIVISIONS

## SUPERINTENDENT OF GOVERNMENT PRINTING CALCUTTA

1928

Price Rs. 6, or 9s.]

THE TO THE USE HART

#### PREFACE

THE articles contained in these volumes were compiled, for the most part, by Mr. R. Burn, I.C.S., from materials that had been prepared for the revision of District Gazetteers. The whole is therefore largely based on the labours of the District and Settlement officers, who collected the information required, and also rendered valuable assistance by examining the articles on Districts, talistis, and towns. Special thanks are due to the late Mr. J. Hooper, C.S.I., and to Messrs. W. H. Moreland, C.I.E., S. H. Butler, C.I.E., and H. R. Nevill, I.C.S., who contributed portions of the Provincial article, or made useful criticisms. Other acknowledgements will be found attached to various articles.

## PROVINCIAL GAZETFEERS OF INDIA

### UNITED PROVINCES

### VOLUME I

United Provinces of Agra and Oudh .- The area ad- Physical ministered by the Lieutenant-Governor of Agra and Oudh lies aspects between 23" 52' and 31° 18' N. and 77° 3' and 84" 39' E. The 250 born-Provinces are bounded on the north by Tillet, and on the daries. north-cast by Nepal; on the east and south-east by the Champaran, Saran, Shahabad, and Palaman Districts of Bengal; on the south by two of the Chour Nagpur States in the Central Provinces, Rewah and some small States in the Central India Agency, and Sangor District in the Central Provinces; on the west by the States of Gwalior, Dholpur, and Bharatpur, the Districts of Gurgaon, Delhi, Kornal, and Ambala in the Punjah, and the Punjab States of Sirange and Jubbal. The Jumna river forms part of the western boundary, the Ganges part of the southern, and the Gandak part of the castein; other boundaries are artificial.

According to the District surveys the areas of the two Dimen-Provinces are, in square miles: Agra, 83, 198; Outh, 23.955; moss. total, 107,164. Including some river-beds which form District boundaries and are excluded from the District details, the total area amounts to 107,494 square miles. The area of the two Native States in the Provinces (Rampur and Tehrl) is 5,079 tounce miles more.

A Presidency of Agm was first formed in 1834, up to which Origin of date the area then separated had been included in the Presi-name. dency of Bengal, being sometimes called the Western Provinces. In 1846 its name was changed to the Lieutenant-Governorship of the North-Western Provinces. The Province Oral. of Oudh! was annexed in 1856, and became a Chief Com-

T.F. 1.

Awadh is a conception of Ajadhah and was the name of a Province Letor- British rele. п

missionership with a separate administration. In 1877 the two Provinces were brought together under the Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh, and in 1902 the name of the Provinces was changed and the title of Chief Commissioner dropped.

Natural divisions. The United Provinces include four distinct tracts of country's namely, portions of the Himalayas, the sub-Himalayan tracts, the great Gangetic plain, and portions of the hill systems of Central India.

Himālayat

The Himalayan tract, which lies on the extreme north, comprises the Districts of Garhwal, Almora, Dehra Dan, and Naini Tal (in part), with the Native State of Tehrs, its area being nearly 19,000 square miles. The outer ranges of hills rive quickly from the submontane tracts to a height of 7,000 or 8,000 feet, and on these are situated the hill stations of Natural Tal and Mussoorie, and several small cantonments. A little farther in the interior is a second range, after passing which the elevation increases till heights of 10,000 and 11,000 feet are attained. Beyond, but still south of the great central arisof the Himalayas, tower the huge peaks of Trival or the 'trident' mountain (23,382 feet): Nanda Devi (25,664 feet), the highest mountain in British dominions; and Nanda Kot (22,538 feet). On the west Dehm Dan District lies partly between the Himalayas and the Swaliks for 45 miles, extending up the slopes of both ranges. These mountainous regions, which nowhere assume the comparative level of a plateau, include some of the wildest and most imagnificent country in the whole range of the Himālayas, and among their snowclad peaks the sacred streams of the Ganges and Jumna take their rise. Many famous temples and places of pilgrimages line the upper course of the Gauges, and thousandsof pious Hindus from all parts of India annually visit the holy source.

Sub-Himālayas.

The submontane tract between the Ganges and the Sordariver has three distinct portions. Immediately below the hills lies a strip of land, so miles wide in the west and gradually becoming narrower in the east, called the Bhābar, into which the torrents rushing down from the steep slopes sink and are lost, except during the rainy season, beneath a mass of boulders and gravel. Wells are almost unknown, and cultivation is carried on by means of small canals. A large portion of the Bhābar is covered with forests, the home of tigers and wild

The word means ' potons."

Clephants, while other game abounds. Below the Rhibbar is a witter strip of land talled the Tarsi, a damp and marshy tract, covered for the most part with thick lungle and rall graza. In both the Tami and the Rhahar the population is largely migratury, cultivators coming in from the adjacent Districts in the plains to the Torai, and from the hills to the Bhahar, and departing after cutting their crops. Only the Tharus and allied tribes, who seem fever-proof, can stand the postilential climate of the Tarai throughout the year.

Other Districts in the plains partake of the nature of the Turni, especially in their northern portions. The rainfall is heavy and streams are numerous, while the water-level is high. Sahāmapur lies bolow the Siwālika; while Bijpor, the Rampur State, Barcilly, and Pilibhit border on the Tarri, and Khert, Bahmich, Gonda, Bastl, and Gonskhpur run up to the Nepal frontier. The whole of this tract is a sloping plain. lying practically free from the Himbligan system, though low hills are found to the north of Bahtaich and Gonda The area of these submontane Districts is about 24,000 square miles.

Rather more than bull the total area of the Provinces Cangelie (53,776 square miles) is included in the great Indo-Gangetic Plata. plain. The western protion comprises thirteen Districts: Muraffarnagar, Meerut, Bulandshahr, Aligarh, Muttra, Agra, Farrakhabad, Mainpuri, Kizwah, Etah, Budaon, Moradalaid. and Shahinhanpur. Most of these are situated entirely in the Doub, or space between the two rivers Ganges and Jumna; but Mutura, Agra, and Ethwah also extend to the south and west of the Jumna, and the last three lie north and east of the Ganges. With the exception of Muttra and Agra, these Districts form a gently sloping plain of alluvial soil, in which neither rock nor stone approaches the surface, though beds of kankar (nodula: limestone) are found. In the west of Mortra and Agra low stone ridges and hillocks form a feature of the landscape. This portion of the Provinces is by far the most prosperous. Ten of the thirteen Districts are protected by canals, and the standard of comfort is distinctly higher than elsewhere. In the centre of the great plain lie the Districts of Camproce, Fatchput, and Allahabad, with nine of the Oudh Districts: namely, Lucknow, Unao, Rhe Harcli, Stripur, Hardot, Fyrabad, Sultanpur, Partabgath, and Bara Banki. The Oodh Districts all lie between the Ganges and the Gogra, while Campure, Fatchpur, and part of Allahabad are in the Doals.

Allahabad also extends north of the Games and south of the Jumns. There are no canals in Outh, but parts of the other three Districts are urigated by these works. The tract is generally fertile, and closely cultivated. The eastern portion of the great plain includes Ballia, Jampur, Aramgarh, Henares, and Ghazipur, all lying between the Gogra and the Ganges, the last two Districts extending also south of the Ganges. The rainfall is heavier than in the central and western portions, and the population deuter.

Central India plateau.

On the south-west and south lie two small tracts holonging to natural divisions of India which differ considerably from the main portions of the Provinces. The four Districts of Juliun, Banda, Hamirput, and Ihansi, with a total area of 10,400 square miles, form part of the Central Indian plateau, and are generally known as British Bundelkhand. They are situated on and below the eastern slopes of the preat plateau, with a gradual fall from south-west to north-east. The tract is broken up, especially in the south, by low rocky bills, spure of the Vindhya mountains, covered with stunted trees and jungle. The soil is largely rocky and infertile, with considerable patches of the richer type known as "black soil," which differs entirely from the alluvium of the great plain. The spring level is low, and there is little canal irrigation. peculually liable to suffer from either an excess or a deficiency of rainfall, and as a whole ranks as the project and most backward portion of the Provinces.

fast Sáts Incás. Mirzīpur, the largest District in the plains, extends from north of the Ganges to the East Shtpurks. Of a total area of 5,200 square miles, 600 belong to the great plain; 1,700 to 1,800 form the central table-land which stretches from the summit of the Vindhyan scarp 30 miles or more to the Kaimur range and the valley of the Son; and the tempinder includes the wilderness of hill and valley, jungle and forest, ravine and crag, with here and there hill encircled alluvial basins, which makes up South Mirzāpur.

Elili System, The most important mountains situated in the Provinces are the Himālayas, which have been already referred to. Running parallel to the outer ranges, at an avorage distance of 15 miles, is the chain of hills known as the Siwālika, which forms the south-western boundary of Dehra Dün District, and has a total length in these Provinces from the Ganges to the Jumma of about 40 miles. East of the Ganges a similar elevation can be traced in part of the Provinces, but its height is insignificant. The northern slope, which reaches 3,500 feet at the highest,

leads gently down into the valley of the Dan which reparates these hills from the Humblayas, but on the south a recep and bold escarpment falls abruptly towards Saharanpur. The principal pass is that called Mohan, over which the main read runs from Sebāranpur to Dehra Dun; but its importance has been much diminished since the opening of the Hardwar-Dehra Railway in 1920. The outlying spurs of the Aravallis in Agra and Muttra are mere billocks, though in the latter District great religious sanctity attaches to them. The three ranges of the Vindhyan system in Bundelkhand are known as the Bindhächal, the Panna, and the Bandair hills; but the highest point is only 1,300 feet, in Banda District. The East Satpurds in Mirzopur are geologically distinct from the Vindhyas, and form a more rugged mass, with less frequent intervals of level ground.

The drainage of the whole area ultimately falls into the River GANGES, which divides the Provinces into two parts, that on spream the east and north being roughly double the portion lying on the west and south. The western side consists of two tracts. the Doan, between the Ganges and the Jumna, and the tract south-west of the lumns. In the northern Deah much of the drainage of the Siwaliks and the plain below passes through the Hippan into the Junua. Lower down the more con siderable streams join the Ganges. The Jumna, however, receives on its right bank the large river Chambal, draining part of Central India and Rajputana, and the dramage from the northern slope of the Vindhyas through Bundelkbaud. East of the Ganges there are three main systems, the Kanganga. Guard, and Goona, the first and last of which rise in the Himflayas, while the Gumti starts in the Tami between them. The characteristic feature of each of these three river is that the greater part of the water tarried off by them is received on the left of northern banks. The Great Gaspan just touches the eastern boundary of the Provinces, but is not an important part of the river system.

The Ganges rises in the Tehrt State, under the name of Genges-Bhaghathi, and its junction with the Gogra is the most easterly point in the Provinces. It is a considerable river even at Hardwar, where the Urver Ganges Canal starts, and it is tapped again at Nataura for the Lowen Ganges Canal. It is the source of the water-supply of the Loge vities of Meerut (by a canal), Campore, and Beoares. Its chief tributaries are the Ramganga (Farrukhabad), Jumna and Tons (Allahabad), Gungti (Ghaspur), Chhoti Sarja or Tons, and Gegra (Balill),

besides many smaller affluents. The principal towns on and near its banks are Srinagar (on the Alaknanda affluent). Hardwai, Garhanektesar, Anapshahr, Soron, Farrel habad, Fanang, Bithur, Cawnpore, Dalman, Manikpur, Kara, Aliahabad, Sirea, Muzapur, Chunar, Benares, Ghazipur, and Rallia. Before the construction of roads the Gangas was the chief route for goods and passengers between Bengal and Upper India, and for more than thirty years after the completion of the grand tronk road it continued to be the principal through trade route. The opening of railways has altered this; but timber and bamboos are still floated down the upper part of the course, and stone, grain, and sugar are exported to Bengal. Rice is largely imported from Rengal by river, and other grain, manufactured goods, and metals are brought in the same way.

Johnna.

The JUMNA likewise rises in Tehn, west of the lotty mountain Bandarpunch, in 30° 1' N. and 78' 27 E. At its junction with the large river Tons it emerges from the Hinddayas into the Dün, and piercing the Siwaliks enters the western plain at Fairabad, tien which place it is tapped by the Fasti un and Western Junea Canals. It forms the western boundary between these Provinces and the Punjah as far as Muttra District, giving off a third canal to mile below 1), the at Oklida. After traversing Muttra, Agra, and Exawah Districts, it forms the boundary between the three northern Districts of the Allahābād Division (Cawnpore, Fatchpur, and Allahābād) and the Jalaun, Hamirpur, and Banda Instricts of Bundelkhand It then flows across Allahābād District to its junction with the Ganges, 860 noles from its source. The principal tributaries are the Tons (Debra Dun), Hindan (Bulandshahr), Chambal (Etāwah), Betwa (Hamirpur), and Kon (Banda). On or near its banks are the towns of Haghpat, Brandallan, Muttra, Mahāban, Agra, Pirozābād, Batesar, Etāwah, Kalpi, Hamirpur, and Allahabad. The Jumna carries a smaller volume of water than the Ganges, though its course to the point of junction is longer, and differs from it in character, being usually confined within high, well-defined banks, while the Ganges rolls from side to side of a wide bed often five or six miles in breadth during flonds. Its water is the source of supply for the towns of Agra and Allahabad, and has been found to possess, when fresh, special virtue in destroying the enteric microbe.

Gogra.

The Gogra, or Ghagra, the great river of Oudh, view with the Ganges in volume, while it surpasses it in velocity. Its main constituent is the Kauriala, which rises in the upper mages

of the Himilayas, and their passing through Nephl ascendown up the plains in a series of rapids over immense boulders. Almost immediately after it deleanthes on the Tana the stream splits in two, the western branch retaining the name of Kauriala. though the eastern, known as the Girwa, has a langer volume of water, 'The two branches rounite shortly after entering British territory in Bahraich District, and form the boundary between Bahmich and Kherl. At Bihramghat the stream. which has been joined by other tributaries, assumes the name of Gogm (though this is cometimes applied at Mallampur higher up); and from here it divides Gonda, Basil, and Gorathian from Büra Bankt, Fytabad, Aramgarb, and Rallia, and then forms the boundary between these Provinces and Bengal as far as its junction with the Ganges. Its principal tributary is the large river, also coming from the higher Himalayas, which is known in its earlier course as the Kall and Sanda, and amerges from the hills at Barmdro in Almora. The point of junction has varied considerably within the last hundred years; but the channel which now brings down the main stream is the Dahawar, which joins the Kauridia at Mallanpur. The main stream of the Sarja joins the Gegra in Bahmich District, and the Muchauta and Rapit in Gordhpur. Fyrabad and Ajodhya are the two largest towns on its banks; Tanda and Barhai are also situated on or near it.

The Gunti rises in Pilibhit, and its valley is scooped out Gamilialmost in the middle of the plain between the Ganger and the Gogra. After flowing south-east through Shāhjahāopur and Kheri Pistriets, where it becomes navigable, it forms the boundary between Shāpur and Hardot. Entering Lucknow District, it passes the city. Its winding course flows through the Districts of Bara Banki, Sultanpur, and Jaunpur, and then it joins the Ganges on the borders of Benares and Ghāripur. The Sai, its largest tributary, joins it in Jaunpur District. The Kulyāni, Kathuā, and Sarāyān are smaller affluents. The traffic on the Gumt has been reduced since the opening of the Oudh and Rohilkhand Roilway; but grain, fuel, and thatching grass are still carried. From time to time disastrous floods are caused by heavy rain when the river is full.

The Ramganga rises in the Outer Himalayas and enters the kimplains in Bijnor District, whence it crosses Moradabad, the kimplains in Bijnor District, whence it crosses Moradabad, the kimple Rampur State, Barcilly, Shahjahanpur, Farrukbabad, and Hardof, reaching the Ganges, nearly opposite Kannui, after a total course of about 370 miles. Moradabad is the principal town on its banks; but its bed changes frequently throughout

its whole course in the plains, and for some years, up to 1877, it flowed close to Bareilly.

Acenery.

The greater part of the Provinces consists of a level plain, the monotony of which is broken only by the numerous village sites and groves of dark-olive mangritrees which meet the eye in every direction. The great plain is, however, highly cultivated, and the fields are never bare except during the hot months, after the spring harvest has been gathered, and before the ramy season has sufficiently advanced for the autumn crops to have appeared above the ground, The country-side then puts on its most desolate appearance; even the grass withers, and hardly a green thing is visible except a few patches of garden crops near village sites, and the carefully watered fields of sugar-cane. At this time the dhak truck (Butes frondess) burst forth with brilliant scarlet flowers -a striking contrast to their dusty surroundings. With the Ineating of the monsoon in the middle or end of func the segme - hanges as if by magic; the turf is renewed, and tall grasses begin to shoot in the small patches of jungle. Even the salt distributions put on a green mantle, which lasts for a very short time after the close of the mins. A month later the autumn crops-ries, the millets, and maize-have begun to clothe the naked fields. These continue in the ground till late in the year, and are succeeded by the spring crops-wheat, barley, and gram. March they ripen and the great plain is then a rolling sea of golden carn, in which appear islands of trees and villages, butno hedges. North of the Provinces the Himalayas rise with their outer face and flanks clothed in dense forest. The inner ranges form a tangled mass of ridges towering higher and higher till the lofty snowy peaks are seen. In the south and southwest the level of the plain is broken by the low but precipitous scarp of the Vindhyas, and the isolated hills which stand out beyond.

Lakes.

In the Outer Himālayas are found several mountain laket, known as Nainī, Bhīm, Naukachhiyā, Molwā, and Sāt, with the aftix tāl or 'lake.' They are more remarkable for their beautiful scenery than for their size. The first four vary from 170 to 120 acres in area, while the last is a series of seven basins (sāl = 'seven'), two of which are now dry. In September, 1893, a landslip took place at Gounā in the interior of Garliwāl District, when the side of a mountain 9,000 feet above the sea fell into the Birahī Gangā, the bed of which is 4,000 feet below the summit of the mountain. A dam was formed 1900 feet high, 2,000 feet across the top, and 11,000 feet long. 'The

dam burst in August, 1894, and the level fell by about 190 feet, leaving a permanent lake 3,900 yards long with an aretage breadth of 100 yards and a depth new the dam of 300 feet.

In the Dolb, in Outh, and still more in the Comkhpur and Benares Divisions, July or marshy lakes abound, most of which shrink to small dimensions in the hot season. Thus the Suraba Tal in Ballia covers an area of 8,500 acres when full, but dwindles to 2, Sooneres in the hot season. The Bakhira Tal in Bastl, 5 miles long and 2 broad, is seldom more than a or 5 feet deep. Another large swamp is at \$10dl in Hardot. while the Behtt lake in Partabgath has been drained and itsite is now cultivated land. In Hundelkhand and Miczanur there are artificial reservoirs of water, formed by embanking the months of valleys, most of them monuments of a former time. The principal lakes in Bundelkhand are in charge of the Irrigation Department.

The Provinces may be divided geologically into a succession Godery. North east of the Taketin of cones lying north-west to south-east. central axis of snowy peaks, and stretching up to and into Tibet. is a vast sequence of sedimentary strata lying in a great elevated basin. The series begins with unfossiliferous states, quartzites. and preasional conglomerates of very ancient aspect, called Haimantas, which are at the base of everything, and are probably identical with the slate series found south of the These was up into, and are overlaid by, thinhedded dark-grey coral limestones, followed by fleeb-coloured quartitie, and more coral limestone, shales, grey and crinoid limestones, which are probably of Silurian age, and capped by a massive white quartrite. The total thickness is about 2,300 feet. Above this Pre-Permian group is a layer of black crumbling shales of Upper Permian age, and there is thus a physical and palacontological break here between the Upper Siluman and Upper Permiss. After about 130 feet, these black shales pass into the Trias, which is the most characteristic series of this part of the world. It averages 2,000 feet in thickness. consisting of dark states and limestone beds, with a quartate stage next the top. The peries is prolific in characteristic festil About 2,000 feet of mussive well-bedded limestone. mostly unfossiliferous, follow above the Trias, the so-called Dichsteinkalk in part, which represents the Loner and Middle Jurassic. Above that, again, come the characteristic flark Spite sludes, over 1,000 feet thick, with concretionary lunds, contain-

I Combined from stoles by C. S. Middlemin and E. Viedenburg. Geological Surrey of Irais.

ing a fine Upper Jurassic fauna, not yet described in detail. These pass in this part into great thicknesses of dark Giannal sandstone of presumably neocomian age (Lower Cretaceous). The regular sequence is now broken, along the watershed, by a great horizontal thrust plane, bringing in exotic masses of older limestones and shales set in basic volcanic reeds. They chiefly build up the lofty jagged summits from Balchadhura (18,110 feet) and Ghatamenin (18,700) to Kunguhingri (19,170), and he upon Guinal sandstone or Spiti shales. Although they show magnificent suites of macine focals, ranging from Permian or Permo Carboniferous to Upper Jurassic, the form of the rock, and the fossils it containts, differ from the same section lower down, and these masses have probably come from the north.

Central

The snowy range containing all the loftier peaks is built up of immense sills of massive gneissic rock, much of which is probably very ancient. With the gneissore grante is associated a large quantity of thin bedded micaceous, garnetiferous, and other crystalline schusts.

Lower Himālayen zonc

The large area from the snowy range to the outer edge of the Himalayas has not been fully exampled. The most general feature is the gradual passage from the fintly dopping foliated schists with sills of gnessose grapite to steeply dipping slates, slaty shales, and quartrite, with or usional thin bands of dark limestone and here and there volcanic breecia. All are unfo-siliferous, and must be presumed to be at least as old as Pre-Cambrian. Here and there faccolites and sills of gneissose granite reappear, with much the same composition as, but isolated from, the central chain. Mussive lunestone and dolomite formations are found at many places, especially along the southern edge. They are of varying but considerable thickness, always unfossiliferous, always in narrow bands among the slates. The Lower Himülayas are remarkable for their steep-sided ravines and frequent convex slopes, due to constant undermining by swollen rivers. Landships are, as a consequence, not uncommon. In some cases, these caleareous formations are overlaid by an imperfectly fossiliferous series of dark sandy hmestone, probably of mesozoic age. turn frequently underlie thin dark shales and calcareous shales. It is generally in rocks of these younger sub-zones that the ores of copper, lead, and non in Kumaun are worked, but with only a small measure of success.

Sub-Hima- The sub-Himalayan zone of younger Tertiary strata is well layan zone defined and sharply separated from the Outer Himalayas by

a continuous reversed foult, and is 6 to 14 miles in width. except near the Dohn Don, where it is wider. The whole of these Tertiary strate are fresh-water deposits, and one of immense thickness, comprising three stages; the Upper Shealth conglomerates, sands, and clays: the Middle Singlik sand rock; and Lower Siwalik Mahan sandstones. The system is celebrated for having yielded the magnificent (chiefly maumulian) Siwilik fauna. Most of these fossil remains have been gathered from the middle and unper tock stages. They comprise thirty-nine genera and seventy-one succies of manimalia which exist at the present day, and twenty-five genera and thirty-seven species now extinct. Cypsum is found in the Nihal Nadt, below Naint Tal; gold is washed in very small quantities in the Sona Nadi; and from was formerly worked from clays in the Nahan sandstones, near Dechaurt and Kaladhungi in Noint Tal District.

The Gangetic alluvium is still being carried down from the Gazzette Himālayas and deposited by the Ganges and its affluoris. It alianup is no to 300 miles in width and extends to unknown denths near the foot of the hills, where its floor is probably still sinking. On the south it overlaps the ancient rocks of peninsular India, and is much thinner. A well-boring was made at Lucknow from a surface 370 feet above seadered to a depth of 1,336 feet without reaching the bottom of the Ganges basin. At Agm solid rock was met at 481 feet from a surface-level of 553 feet above the sea. The Bhabar gravel or torrent-boulder zone reaches a height of about 1,000 feet. Below the libiliar comes the great alluvial plain of clays and sands, broken only by the wide river valleys, which are from 50 to 200 feet lower in level, and have the distinctive names of bhidar, Latri. hacklide or dearn, as opposed to langue. In the drive parts of the great plain the fertility of the soil is impaired by a surface efflorescence called rely. This consists of curbonate and sulphate of soda, often mixed with common rait. Land covered with these salts, or burnen from any other cause, is called viar, and includes about 2,000,000 acres.

In the south-west of the Provinces the Vindhyan rocks Vindhyan emerge from the alluvium in Mirzhur, Allahābād, Bindā, 1725—11amirpur, and Jhānsi Districts. The system is primarily distinguished by its series of three massive scarps of sandstone, each representing a different subdivision; but only two of these are found in the United Provinces. The northernwost or Kaimur sandstone, which forms the Bindhāchai range, is deeply socred by river valleys. The celebrated forts of Chunăr

and Kälinjar stand on detached masses of this range. Further south the lower and upper Rewoh sandstones or our in the Panna range. Both of these formations are found throughout the southern portion of the Instricts named above. In Miraipur the jungle series of red shale, Bijawar slates, quartities and haematitic jaspers and Archaean gueiss he below them, and the Gondwana shales, sandstones, and bould-r-beds above them. Coal is found in the latter, and was formerly worked. In Thansi and Hamirpur the imeass is more prominent; but the Bijawar series occupies a strip of land about 17 miles westward from the Dhasan river, containing rich linemature ore in tilaces. with a cupriferous vein in one locality. The outer fringe of the great spread of basalt constituting the Milwi trap just reaches the south of the Laburut takail in Thansi. In Agra District the Vindhyan sandstones again appear, and farther north in Muttra are a few ridges of ancient quartrites.

Botany<sup>1</sup>.

The flora of British India has been divided into five distinct elements. The oldest, called the Indo-African, extends from the Decean to the Gangetic plant and to the drier parts of the " Himālayas. Thus the flora of North Africa and Arabin is represented by Pogomum, Fagomu, Balandes, Acuma aratim, Alliagi, Grangea, Salvadora, &c. ; and that of tropical Africa. by species of Gravia, Sido, Corchorus, Transfetta, Indigafora, Glorina, and many others. The Eastern element, belonging to the Penmsula from Singapore to Assam, is represented along the base of the Himalayas from Gorakhpur to the lumpa, The genera Astragalus, Artemisia, Pedicularis, and Corydalis, with many Roragireae and Umbelhiferae, are characteristic of the Central Asian element, found chiefly at high elevations, but sometimes extending to lower levels on the western drier The European element appears to have entered at the western end of the Himālayas, not long after the southward extension of the Central Asian element, and to have spread eastward in both hills and plans. The Quaternary element occupies the cultivated tracts and accompanies man-

Gangetie

Throughout the great plain vegetation is on the whole uniform, differences being chiefly due to variation in rainfall and temperature. In the west, where the minfall is under 30 inches, vegetation becomes scarny, the trees and shrifts are mostly thorny, and plants characteristic of desert regions are found, such as Alhagi, Capparis, Prasopis spicigera, Fagonia,

<sup>4</sup> C. B. Clarke in Journ. Linu. Sec., vol. xxxv (1898).

Condensed from an account by J. F. Duthie, lately Superintendent, Botonical Survey of Northern India.

Teroma undulata, Salvadora persita, Saluda, and species of Gravia, Sida, and Acada. Some of these extend eastwards in sandy waste ground. Two well-marked features are observed in the annual herboceous species. Those imperime in the cold reason on waste ground, or as weeds in cultivation, are mostly of European origin and are more abundant in the wheatgrowing liktrices of the north-west; while the annual herbree which springs up in the rains is composed mainly of species which have come from the east or from Central or Southern India. The sandy riversin tracts produce coarse grasses and deep rooted perennials, with prickly shrubs and other desert plants. In the ravines the scanty vegetation consists mainly of stunted trees and shrubs and perennial plants, many of which belong to the African and Arabian type. In over the Lind produces no vegetation where rely is very abundant, but elsewhere Sperobolus arabicus or pullidus and Chloris virgata are found, which will not thrive except on raline soil. The actural orders most represented in the Upper Gangetic plain are: Leguminesac, Gramineae, Compositac, and Cyferacene. Only two palms are found wild, namely, Placents sylvestric and P. acaulis.

The tropical zone extends up to about 5,000 feet above the Himirea, and is eminently a forest tract forming part of the great layer, belt which includes the Bhābar. In the west, the vegetation of the Dan valley between the Siwaliks and Himalayas is particularly luxuriant. Orchids are plentiful along the base of the Himulayas, and about sixty-two species representing twentyfive genera have been identified. The aspect of the vegetation changes as the slopes rise; and at 4,000 feet Engelhardtia, Rhus, Pistacia, Cornus, Rosa, Clematis, Bankinia retuta, and Albinia mollis (pink siris) are met with, followed by the fanj ouk tree, thododendron, and Pieris malifolia. The forests are more scattered on the southern slopes, while the northern declivities are covered with dense growths. The temperate tone teaches to about 12,000 feet, which is the average limit of forests; and here European genera increase, such as Clerratic, Berlevis, Hex. Rhamnus, Vitis, Acer., Rubus, Rosa, Colonzaster, Piburnura, Longera, Rhededendron (arboreum and campanielatum). Ouerrus (incana, dilatata, lanuzinosa, aunulata, und semerarpifulia), Pinus (longifelia and excelea), and Arondinaria The epiphytic ferns (Davallia, Pelifulium, &c.) drape the trees during the rains, turning brown and shin elling when the monsoon ceases. At about 12,000 feet the high-level forests begin to thin off into thickets of hirch and willow, mixed

1 For details see section to Forent.

with dwarf rhododendron and other shrubby plants, until the open pasture land is reached, which is richly bedizened in the summer months with brilliantly coloured alpine species. Ramunculaeae, Cruciferae, Leguminosae, Rosaceae, Saxifraguesee, Crassulaeae, Umbelliferae, Coprifeliaeae, Compositae, Campanulaeae, Primulaeeae, Gentianaeae, Secophularineue, Lubistue, Polygonaeae, Salicineae, and Gramineae are the natural inderamost largely represented. Saxifraga, Sedum, and Saussurta have been found up to 17,000 feet.

East Sätpuräs and Central India plateau. In the hilly portions of Mirapur many Central and Southern Indian species reach their northern limits, such as Maramickia binata and Soymida febrifuga. The flora of Bundelkhand is similar in many respects to that of South Mirapur, but the drier climate encourages the growth of desert plants. Allantar excelsa, Anogeissus fendula, and the tean-tree do not grow wild north of Bundelkhand.

Wild animals.

Elephants are still found in the Siwaliks and in the Bhabar. and every few years they are nonsed by men riding thine elephants. Tigers are fairly common in the forests of the Siwāliks, the sub-Himālayan tracts, and Mirzāpur District, and are also found in the south of Allahabad, Banda, and Ihansi. Leopards are still more widely distributed, and the snow leopard is found in the Himalayas. Within the last few years . a rhinoceros has been shot in Gorakhpur District, and wild buffaloes are sometimes met with there. Wolves, jackals, and hyenas are found nearly everywhere, and the first-named are not infrequently the cause of death to human beings. In the Siwāliks, Almorā District, parts of Northern Gudh, Mirzāpur, Banda, and the Lahtpur subdivision of Jhansi wild dogs (Cyon dukhunensis) are occasionally met with. Antelope, raligui (Boselaphus tragocamelus), and wild hog abound in many parts of the open plains. Simbar (Cercus unscalor), Likar or bartingdeer (Cervulus muntjac), the four-horned antchope (Tetracerus quadricarnis), and chital or spotted door (Cervus axis), are to be found in the forests; while the swamp deer, or gond (Cervus duvanceli), and parha, or hog deer (Cerrus farcinus), live near swamps, and the chinkara (Gazella bennetti) haunts the jungly ravines on the banks of the larger rivers. Musk deer (Muschus ' moschiferus), thar (Hemstragus jemlaicus), gural (Cemus garal), and other species of wild goats, sheep, and goat-like antolopes are found in the Himālayas. In the hills of Kumaun and in Mirzāpur and Bundelkhand black beurs (Ursus torquatus in , the Himalayas and Melursus ursinus elsewhere) are fiurly common, while the Isabelline bear has been observed near the

snows. Many varieties of duck and greek risk the Proxinces in the cold season and a few based here. Same, quail black and grey partridge. Earlyrouse, burtard, plants, florican, and jungle-low) are the commencer game hirds, while wondrock, chikar, and phenomia are found in the hills, and the sacred peacock in most parts of the plaine. Snakes are common greeywhere, and immense pythons are met with at the foot of the outer ranges of the Himhlards and in Bundelkhand. Colmas and karaits (Bungarus taerukus) cause considerable loss of human life, and also kill cattle.

The year may be divided into three distinct searons. The Citoste cold season, commencing shortly after the withdrawal of the and south-west monsoon, begins at the end of October and extends to the middle or end of March. It is characterized by bright clear weather, generally cloudiess except for a few flecks of cirrus which accompany disturbances from Persia. At night first on the ground is not infrequent during December. January, and February, but the days are pleasantly warm, Rain may fall at any time, owing to storms from Porsia; but the total amount does not usually exceed two inches in the plains, and it usually falls about Christmus or early in the New Year. At the end of March the increasing heat causes a hot land-wind throughout the day, usually coming from the west with considerable force, and accommunied by violent dust-In June this wind ceases, as the south-west monsoon approaches, and the mins commence in the south of the Provinces between the middle and end of lune. After the first burst the weather is broken, but minless intervals are not uncommon. In September these dry periods become more frequent and last longer, and in October the monsoon currents cease. The climate in the hills resembles closely that of the low-lying parts of Switzerland. The winter is frosty, and snow generally falls as low as 5,000 feet, while it has been recorded at 2,500 feet. The summer is warm and relaving, except at , high altitudes. In the rains there is much cloud and for.

The mean shade temperature in the plains varies slightly Temperaaccording to the position of stations: thus Agm, which is near three the Rainutana desert, is very hot in the dry season, and is also warmer than more easterly stations during the monsoon, owing to its smaller rainfall. The difference is, however, only a few degrees. In the different seasons the temperature ranges from 62° or 61° in January to 93° or 94° in May. The average maximum and minimum temperatures of the representative

1 From a note by E. G. Hill, D.Sa., Melecuclogical Reporter.

places shown in the table on page 142 may be ascertained by adding or subtracting half the daily range; thus the average temperature varies from a minimum of 47° or 48° in January to a maximum of 107° in May. The highest maximum recorded was 120° at Agra on June 18, 1878; but temperatures of 115° to 116° are reached at one place or another nearly every year.

Roinfall

The monsoon min may come from either the Bengal or the Bombay current, and the heaviest rain is frequently caused by the meeting of the currents from both directions. The fall in the plants is beaviest in the east, where it annumbs to over 50 inches, and least in the north-west, where it is only 274 inches, the humid winds discharging their moisture as they pass across the country. As they reach the submantance Districts and outer hills, cooling causes a precipitation greater than in the plains. Thus the minfull is, in the plains, at Benares, 40 inches; at Cawmore, 31 unches; and at Agra- $27\frac{1}{2}$  inches; in the submomane District, at Gorakhpur, 50 inches; at Bahraich, 41 inches; at Roorkee, 42 inches; and in the Outer Himalayas, at Naim Tal, 102 inches; at Mussoorie, 97 inches; and at Rankhet beyond the outer range, only 54 inches. There is a similar decrease in the Bombay current, which gives 60 inches at Jubbulpore; 49 inches at Saugor, and only 37 mehes at Jharai. Variations in the minfall are common. In 1883 Illand reserved only 15 inches or 40 per cent, of the normal, and in 1896 Allahabad received 183 inches (46 per cent.), Agra n-4 inches (34 per cent.), and Campure 16.6 in hes (52 per cent.). On the other hand, in 1894 there was a large excess all over the Provinces. Allahabad received 76-3 inches (nearly double the normal), Dehra Dün 123.8 inches, and Mussooric 157.3 inches, The heaviest fall recorded for twenty-four hours in the plains is 32-4 inches at Nagina in Bijnor District on September 15, 1880. For agricultural purposes the distribution of the fall is most important, and a premature cessation before the end of August will cause more damage than a postponement of the first fall to the middle, or even the end, of July.

Storms, floods, and cyclones.

Destructive storms and cyclones are rare in these Provinces, and none of importance has been recorded. In March and April much damage to crops is often done in limited areas by hail. The worst floods occur in the valley of the Gumtl, which rose 37 feet at Jaunpur in 1871 and 27 feet in 1894, destroying 4,000 houses in the earlier year and over 1,000 in the later, but not causing much loss of life.

Earthquake altocks are occasionally felt, but are not serious. Earth-Some damage is recorded to have been caused in 1506 and in Garket. 1764, and the earthquake of 1955 destroyed a number of houses in Mussoprie and Dehra.

Stone implements have been found in large numbers in Higgs. Mirzapur, Banda, and Hamirpur. A few have been dug up at Preliamurient sites in Benares, Ghazipur, Bulandshahr, and Bastl remains. Those from Banda are chiefly hammer-stones of quartzite. basalt, sandstone or diorite, celts of basalt and diorite, and smaller implements made of their. In Miratpur the principal classes are thert flake knives and arrows. Cup-markings on boulders have been observed in Kumaun, and children still cut them in Bundelkhand. On the walls of cares in the southern team of the Knimur Hills, and on rock faces in Randa, Allahabad, and Mirzapur, rude drawings in red oxide of iron have been found, which depict hunting scenes and other subjects, the most interesting being a rhinoceros hunt. a few places inscriptions of the same kind have been noticed. which apparently belong to a period early in the Christian era. At a few localities in the Western Districts-Mutten, Bijnor, Campore, and Unan-copper arrow-heads and spears are occasionally turned up.

Histories in the European sense were rarely compiled in Historical

India before the Muhammadan conquest, and little has been recorde done to extract satisfactory historical material from Sanskrit literature. The Vedic hymns, which were probably composed at least as early as 2000 n.c., show the Array still settled west of the Jumna. It has recently been suggested that the move forward commenced about 1000 p.c. The two great chies, the Mahabhwata and Ramayana, are of very doubtful historical value; but in these we find Aryan kingdoms established-in the former near Meeral, and in the latter at Aiodhya. Mahabharata describes a contest between two related families. the Pandavas and the Knurayas, who lived at Hastinipur, now popularly believed to have been in Mecrut District. The Pandava brothers were driven into exile for a time, and wandered in places which cannot be satisfactorily identified, but they married a daughter of the king of PANCHALA. Afterwards they ruled near Delhi, which they are said to have founded. Orthodox Hindus place the final struggle between these families a little before the year groz v.c., when the present epoch (Kali Yuga) began. European students have

suggested the thirteenth or fourteenth centuries u.c., while an

on astronomical data. The Ramayana tells the story of the exile of Rama Chandra, son of the king of Ajodhya, who was compelled to wander away into Central India with his wife Sita and a brother. While they dwelt in the wilds, SItā was abducted by Ravann, the demon-king of Ceylon, but was recovered with the help of Hanuman, lord of the monkeys. The nath of the exiles is still traced by pilgrims, and the story is acted and recited every year, while Rama and Sita are to Hindus the perfect models of every virtue. These events are placed in an earlier epoch (Treta Yuga) than the present; and native opinion therefore holds that the Ramlyana was composed before the Mahabharata, though European scholars would place it later on the evidence of style and subject. Linguistic researches have lately given rise to the opinion that the so-called Arvas came into these Provinces by different routes and at different times. Thus it seems probable that one wave passed along the foot of the Himālayas and spread southward only when it reached the east of the Provinces and Bihar, the ancient MAGADHA. Another wave passed across the Jumpa and down the Doab, the ancient Manuara Dusa or middle country.

Buddhism.

The earliest events which can safely be called historical are connected with the life of Gautama Ruddha. The Singhalese traditions place Gautama's death in 543 n.c., while European scholors have suggested various dates between 377 and aro a.c. It is certain that he spent much of his life in the eastern Districts, and the remains of stupes, monasteries, and other relics testify to the extent to which his doctrines were held in all parts of the Provinces as well as beyond their limits. A suggestion has recently been made that Buddhism was a regular development of religious thought among the people of Magadha, and not merely a revolt against the growth of Brahmanism in Madhya Desa, as is commonly supposed. As a religious system it appears to have maintained its position till the fourth century a.p., when a revival of Hinduism took place under the Guptas. The accounts of the Chinese pilgrims in the fifth and seventh centuries s.n. show that Buddhism was then fast waning, and the latest memorial of it as a living faith is an inscription of the twelfth or thirteenth century found in Gonda District.

The Greeks.

The Mauryan dynasty. The first point of contact with Western history comes in the fourth century n.c., with Alexander's invasion and the subsequent relations of Sciences Nicator with Sandrocottus, who is identified with Chandra Gupta Maurya of the Puranic annals. Chandra Gupta's kingdom, the first organized empire in India

ť t

of which we have historic record, extended, after the withdrawn! of Seleveus, from the Hindu Kush to the Hay of Bengal, with is fix capital at Patria. The grandson of Chandra Gupta was Asoka, the first great Buddhist kine, whose pious edicts have been found on pillars and tooks in many parts of India. Three of his inscriptions are known in these Provinces, on pillars at ALLAHARAD and BENARTS, and on a rock at Kalsi in Dehra Dan. The last mentions by name the contemporary kings of Syria, Egypt, Macedonia, Cyrene, and Epirus, and thus fixes the date of Asaka's coronation at 270 or 260 u.c. These inscriptions, and the fragments which have survived from the writings of Megasthenes, the ambassador of Seleucus at the court of Patna, show a highly developed system of government. Outlying provinces were under viceroys, and there were regular grades of officials subordinate to these. The army was carefully organized. Agricultural land yielded one-fourth of its produce, besides rent, to the crown. There were roads with pillers marking the distances, and the capital city was administered by a board of thirty members.

If the chronology of the Puranas is to be accepted, the Later Mauryan dynasty came to an end about 188 or 178 n.c., and dynastics. was succeeded by the Sunga, but there is no independent confirmation of this. Numismatic evidence points to the conclusion that about this time parts of at least four kingdoms were included in the Provinces, corresponding to the ancient SURASENA (round Muttra), North PASCHALA (Robilkhand), KOSALA (round Ajodhya), and a tract south of Allahabad which may have been the kingdom of Koslimbhi. From their coins the kings of Panchala and Muttra appear to have been Hindus, while the symbols on the coins of Ajodhya and Kosimbhi are often Buddhist.

The Chinese chronicles describe the gradual rise in power bakes and of the Sakas or Scythians, who spread southward into India Realizate. about the middle of the second century p. c.; and the evins of Muttra show that they penetrated as far as that place, for the native title of Raja is replaced by Kshatrapa (Sarrap), and names of clearly foreign origin are found. The onward movement of the Sakas had been to some extent involuntary, as they were retreating before the Yuch-chi, a harde divided into several tribes the most important of which was called Kushan. Controversies still continue about the chronology of the period. Many dated inscriptions of the great Kushan kings Kanishka, Hurishka, and Bas Deo have been found at · Muttra and elsewhere, but the era is in dispute. The latest

theory places the reigns of these kings between 125 and 225 A.D. Little is known of the Kushans. Kanishka is famous in Pali literature as a liberal patron of Buddhism. The gold coinage of the period is clearly imitated from the Roman aureus first introduced by Augustus; and it bears the images of many deities, such as the Sun, Moon, Buddha (rarely), and others whose identity is not clearly established. It seems probable that the Kushans were soon Hinduized. The Greek inscriptions on the coins gradually become unrecognizable, and are replaced by Indian letters.

The Gaptas.

Early in the fourth century a great Hindu kingdom arose in Maganna or Bihār, which, like its Mauryan predecessor, spread far and wide. The third king, Chandra Gupta (I), founded a new ent commencing in A.D. 320; and his son, Samudra Gupta, carved out an empire from the Sutlej on the west to Central Rengal on the east, and from Oudh on the north to Central India on the south. Nine kings of Northern India, the rulers of Eastern Bengal, twelve kings of the Decean, and the forest tribes of Central India and Raiputana owed him allegiance. For 150 years the kingdom held together, and the period is remarkable for a revival in Hinduism. The language of the Gupta inscriptions is Sauskrit. instead of Prakrit, which was used previously, and the subjectmatter, where religious topics are concerned, deals almost exclusively with Hindu ideas. It has been suggested that the revival of Sanskrit literature dates from this period. A description of Northern India between A.D. 400 and 413 is given by the Chinese pilgrim Fa Hian. In these Provinces ' the people were well off, without poll tax or much official, restriction, though land tax was collected. Part of Southern-Oudh was forest, and the country north of the Gogra largely deserted.

While Huos and the Rājputs. The Gupta empire appears to have been gradually falling to pieces by the end of the fifth century, decay being hastened by incursions of the Ephthalites or White Huns, another tribe of Central Asian invaders, who penetrated as far an Gwallor and Eran. Petty chiefs rose into power, and among these was a line of rulers calling themselves Maukharis, who reigned throughout the latter part of the sixth century. The period was one of constant warfare between the Maukharis, the Huns, the Guptas of the shrunken kingdom of Magadha, and the

<sup>1</sup> V. A. Smith in J.R.A.S., 1903, pp. 1 et req. An older theory, that the era began in 57 D.C., is maintained by Dr. Fleet (J.R.A.S., 1905, p. 979).

rulers of Millwi. The Mankharls were finally crushed by Silliditya of Malwa, but in 606 lie in turn fell before the armies of Thancear, in the Punjab, whose ruler was connected by marriage with both Maukharia and Guntas. Harshavardhana of Thanctar became king of Kanaui, and founded an era which was used in Northern India for some time. The splendout of his reign and extent of his power are described by Hipen Tolong, who visited India between 620 and 625. Huddhism was fast declining, but still lingered, and was in fact regarded by the king too favourably to suit the Brahmans. who tried to murder him. Harshavardhana intaded Western India between 633 and 640 and also conquered Nepšl, but was repulsed in an expedition to the Decean. His appears to have been the first great kingdom of the modern Kliputs. who probably represent the Hinduized descendants of the invaders from Central Asia. Harshavardhana's empire did not last, and historical sources fail almost entirely till the latter half of the ninth century, when Raghavousi kings were ruling at Kanani. One of these was conquered in 917 by Indra (III) of Gujarat, but was restored by Harsha the Chandel, whose clan was rising into importance in Bunder-KILAND. North-west of the Provinces the Tomars were gathering strength in the Punjaly though they were defeated in 1988 by Sabuktagin of Gharni. M Kanaul Tomars succeeded Raghuvansis, and gave place to Gaharwan.

The Provinces had been free from fateign invaders for The early about four hundred years, when in 1018 Mahundd of Ghazui Mahamcrossed the Junna, and took Bulandshahr; the rich city of Mutten, with its temples full of jewels and gold; and Kanasij. This expedition and two more in 1011 and 1013, directed ogainst Kanaul, Gaulior, and Kaliniar, were mere raids, in which plunder rather than conquest was the aim. Throughout Outh imditions are numerous about the exploits of Mahmad's general, Sälär Masad Ghlish who is said to have fallen at Bahraich in 1033, fighting against Subil Dec, Rafa of Gonda: and although the Muhammadans had got no permanent held on the country, they left converts behind them. Charnivid rulers gave place to the Charids, who gradually overran the Punjah. Muhammad Ghort failed in 1191 to crush the great Prithwl Raj of Delbi, who had extended the power of the Chaubias as far as Southern Bundelkhand; but in the next year he was successful, and Prithni Rai lost his life with his kingdom. Kuth-ud-din, a Turki shive, was appointed general in Hindustan, and in regresquired Meenut,

31, 1

the first town to fall east of the Junina. Delhi, Kalinjar, Mahobā, and Koll were then taken; and in 1194 Muhammad and his general defeated Jai Chand of Kanauj, and thus broke the last Hindu power of importance. Budaun and Ajodhya were made the seats of local governors, who had plunty of fighting with their turbulent subjects during the next few years. Bundelkhand had not been subdued, and the first half of the twelfth century was a time of war in most parts of the Provinces. In Southern Oudh the Bhars had risen on the fall of Kanaui; but their chiefs, Dalki and Malki or Dal and Bal, were crushed in 1247. Things were quicter under Chiyas-ud-din Balban (1265-87), who was a strict but just ruler, and kept the Provinces at peace, partly no doubt to be free in case the dreaded Mongols should appear on the north-west. The blave dynasty of Delhi was followed by the Khiljis; and under the second of this line, Ala-ud-dia Muhammad, who gained the throne by murdering his uncle on the sands of the Ganges between Kara and Manikpur in 1295, government was a stern reality. Spies were everywhere; all pensions, grants, and endownients were resumed; Hindus were heavily taxed; the land revenue amounted to half the produce; and an attempt was made to fix prices. Alfi-ud din conquered the Deccan and repelled the Mongols; but the harshness which kept internal peace in his lifetime was it-elf the cause of disruption when his strong personality was removed in 1316. Five years later his debauched son trusmurdered, and a pretender was beheaded after a reign of a few months. Ghiyas-ud-din Tughlak, first of the Turki line, had been Alfa-ud-din's general in the Punjab, and order was soon restored. Under his son, Muhammad bin Tughlak, a reign of terror was revived. Ghiyas-ud-din had reduced the land revenue to one-tenth of the gross produce; but it was now increased by new cesses to such an extent that when drought came in 1344 a famine began, which lasted for years, and depopulated the Doub. In 1351 Firoz Shah (111) began a wise and beneficent rule. Taxation was reduced and yet money was available for public works. The town of Jaunpur was founded in this reign, and a large fort was built near Budaun. After the death of Firot in 1388 the Delhi kingdom fell to pieces. In 1394 Khwāja Jahān was made governor of Kanauj, Oudh, Karā, and Jaunpur, and assumed independence. For more than eighty years this Sharki ('castern') dynasty ruled from JAUNPUR over the greater part of the Provinces, and has left splendid memorials in the mosques erected at

the capital city. Timur, the Moncol, took Delhi in 1409, and next year barried the present Meerut Thirleion. The first half of the filteenth century wire a succession of pupply rulers or usurpers at Delhi or Konsul, while the Death, Rohilkhand, and Bundelklund were the scenet of rising, by the Hindus, and conflicts between the kings of Jaunpur, Delhi, and even Main's and Gujarit. At the end of the period there were independent rulers at Sambhal, Koll or Jalezar, Right, and Kumpil or Patials. In 1430 or 1451 the Afghan line of Local was founded by Bablel, who started vigorously on the task of crushing the petty local rulers, and breaking the more important power of Jounnar-a task which rook twenty-five years to accomplish.

Early in the sixteenth contury the capital was moved from The Helhi to Agra, which was to become a great city under the Merials Mongols or Mughuls, who now appeared again. In 1526 and Suris Babar defeated the Afghan king, Ibrahim, at Panipat, but found himself in difficulties at Agra. On the west the Raimus were united under the Ring of Udaipur, while on the east the Afghans were threatening an attack from Kanauj. The crown prince, Humdyun, made a successful raid as far is launpur and Gharpur, and Babar gained a great victory over the Rajputs near Fatchpur Sikri. He was thus able to send troops cast to check the Alghans, who had taken Koil and held the central Dodh. The Maghal forces were, however, unsuccessful, and Babar had to stop his invasion of Central India and return to their aid. He pressed on to Kangui, and after defeating his opponents north of the Ganges marched through Gudh and returned to Agra, where he died. When Hum2yan succeeded to his father's kingdom in 1530, he found it imperfectly subjugated and difficult to rule. His first efforts were in Central India; but though he was successful there, a rival was consolidating his resources in Bihar and the east of the Provinces. This was Shor Khan Suri, who had accepted a commend from Hibar, but now sinced at independence, and refused the offer of Jaunpur. After three years' fighting he goined a complete victory over Humigan at Kanzuf in 1540 and won the throne of Northern India, with the title of Sher Shih. He was a great administrator, who made roads, reformed the currency, and laid the foundations of a sound revenue system. In 1345 lie was fatally wounded while besieging Killnjan, and during the next ten years the Sari power fell to pieces. Humayan returned in 1535 and recovered Agra and Delhi, but died in 1556.

Akbar was a boy of thirteen at his tather's death, and had to Akber.

conquer his kingdom before he could rule it. For two years the Punjab kept him busy, but in 1558 he came to Agra and reduced Gwalior. The next year saw the Afghans defeated in Jaunpur and Benares, but they rebelled again in 1561, and Chunar was not taken till later. In 1565 the lords of Ajodhya and Jaunpur revolted and took Lucknow, and in 1567 another governor of Jaunpur headed a rising. Apart from these events the Provinces had entered on a period of comparative peace and good government, which was to last for a century and a half. Akbar abolished the pilgrim and poll taxes on Hindus and many vexatious cosses. The land revenue system was still further improved, and assignments of land were examined. the record of his great survey is found the most complete. account of the country at any period before British rule, and the liberal monarch gathered round him poorts, musician's theologians, and great writers. The earliest Christian mission in Northern India was established at his invitation. Maginficent forts were built at Agra and Allahabad; and on a torky ridge west of Agra, where the saint lived who forctold the long-desired birth of a son to the monarch, a splendid mesque and palace buildings were raised, surrounded by the new town of Fatehpur Sikri.

Jahängir.

In 1605 Akbar died at Agra, and his son succeeded as Jahängir. Jahängir's son, Khusra, attempted to scize the throne; but apart from this the reign at first passed peacefully in Upper India, though there was fighting elsewhere. In 1623 Khurram, another son of the emperor, rebelled and advanced towards Muttra, but was driven back to Central India. The next year he advanced through Orissa, while Abdullah Khūn, a noble who favoured him, besieged Allahābād. The royal troops forced Abdullah to fall back on Jaunpur and Benares, where he met Khurram, who again retreated to the Decean. Jahāngīr, like his father, was a great builder, and he raised a noble tomb over Akbar's remains near Agra, and added palaces in the royal forts at Agra and Allahābād. He received with distinction English travellers at Agra and elsewhere.

Shāh lahān. On Jähängir's death at Lahore in 1627, Khurram hastened to Agra and obtained the throne under the name of Shāh Jahān. Early in his reign the Bundelās, who had been turbulent throughout Akbar's life, but had been friendly to Jahāngir, broke out and several expeditions were sent against them. In 1639 a raid was made on the Hindu temples which had been built at Benares in the previous reign, and many were destroyed; but the Provinces were generally at peace.

The eartful system of government marted by Sher Shill, and improved by Akbar, still continued, though deterioration had commenced. The most splendid relic of the reign is the tomb of white marble, built at Agra on the leask of the Jumna by Shah Jahan in memory of his wife, where the temains of the emperor and his beloved Munite Mahal lie side by side under the most beautiful memorial of a life's devotion that the world has seen. In 1657 Shah lahan's health failed, and he was now to be treated by his own sons as he had dealt with his father. The favourity, Plara Shikoh, was with him and regarded bimself as beir; Shula was in Hengal, Murad Rakhsh at Abmadahad, and Aurangzeh, the most careble of all, in the Deccan. Dark seized the treature at Agm, and sent one army which surprised Shuiz mear Benares, and another to watch Auranguels and Murad Bakhsh, who combined forces and defeated it. The allies then murched on Apm, and were successful in a battle at Simogarh.

Aurangzeb entered Agra in 1658 and followed Dira, who Accardhad fled to the Punjab. He formally assumed the throne at rela Lahore, while Shah Jahan remained a prisoner in the fort at Agra till his death there in 1666. Shull's forces took Benares. Chupfer, Allahaliad, and Jaunpur; and Aumagreb abandoned the pursuit of Dark, who had escaped to Sind, and returned to meet them. At a battle between Kura and Khaluha in Fatchpur District, Aurangreb won a decisive victory, which practically closed this war of succession. As in the previous reigns, these Provinces enjoyed comparative freedom from war: but the administration was harsh, and the way was being prepared for coming marrhy. At Benures and Muttra musques were built upon the holiest temples. The poll tax on Hindus was revived: and although, as usual at the beginning of a reign, cesses were formally abolished, the religious zeal of the emperor and his continued absence and absorption in the affairs of the Decean had bad effects on the administration.

When Aurangeeh died in 1707 he left a will advising his fiedling three cons to divide the empire. The second con, Azam, of Maghan refused to accept the division and fell in battle at Jujan in 1707-61. Agra District, fighting the eldest brother, Muncram, who became emperor under the title of Shih Alam Dahidur. Kim Bakhsh, the youngest, died of wounds received near Hyder-Altid in the following year. The collapse of the Mughal power was at hand. Shah Alam Bahadur died in 1712, and the approaching disasters became clearer. In less than fifty years wight rulers sat on the throne of Delbi. One of these, Muham-

mad Shāh, reigned for thirty years, and died a natural death; three were puppets, each reigning for only a few months; three more were murdered while reigning, and one was deposed and blinded. The dissolution of the empire was primarily due to the incompetence of these degenerate rulers; but it was hastened by the repeated attacks of the growing Hindu powers on the west, the north, and the south (the Jāts, Sikh, and Marāthās), and the paralyzing shocks dealt by Perslan and Afghān in vaders from beyond the north-west frontier.

1.

Jäts and Sikhs. Before the death of Aurangzeb the Jats had begun to give trouble west of Agra, and gradually extended their influence within the Provinces. The first incursions of the Sikhs, who had changed from a religious sect to a warrior nation, took place in 1709, when they invaded Saluranpur and poured into Muzaffarnagar, but were checked there and driven back for a time into the hills.

Marathus.

The most considerable factor was, however, the growth of Maratha power north of the Vindhyas. The first appearance of Maratha armies so far from the Deccan, where their influence was already paramount, took place in 1718, when they were invited to Delhi by one of the factions at the court of Farrukh Siyar. They withdraw for a time, but some years later (1729) they appeared again in what is now BRITISH BUNDELKHAND, where the Bundelüs had been trying with variable success to throw off the Muhampundan yoke, and this area became subject to Maratha rule and remained so for more than seventy years. A raid in which Agra and Ethwah were plundered (1737) was repulsed by Sakdat Ali, the capable Wazir of the empire and governor of Oudh, and for a time the Marathas were held in check. They were, however, invited to return (1751) by Safdar Jang, nephew and successor to Saadat Ali, who required help against the Pathans of Furnishabad. The alliance was not lasting, and soon afterwards Safdar Jang found his former friends arrayed against him (1754).

Foreign invasions. In 1738 Nadir Shah swept down on Delhi, slaughtering and plundering; and although his stay was short, the blow to the empire was serious. An attempt by his successor, Ahmad Shah Durrani (1748), was repelled by Safdar Jang, but the shock caused the death of the emperor, Muhammad Shah. A second invasion (1752) was more successful, and the Afghans penetrated, five years later, as far as Agra, though they were unable to take that city.

Internal dissensions.

During the first ten years after the death of Shah Alam Bahadur the predominant feature of internal politics at Delhi was the struggle at court between the Irani or Perslan party and the Turants or people from Central Asia. Two Saivid brothers, who belonged to the former party, were of great assistance to Farrakh Siyar in his struggle for the throne. The weak-minded emperor was then, however, won over la the Turing and lost his life at the hands of the Spirids (17 m). In 1720 one of the brothers was murdered, and the other was defeated soon after.

From this time commences the history of the new states New which began to be formed within the Provinces, and became dates practically independent, though acknowledging the couperor as their nominal lord.

Chief among these was Ovon, which had hitherto been a Onella. mere province of the empire. Sandat Alt, a leading member of the Turant party (though a Persian), was appointed governor of Oudh in 1721, and of Allahabad later; and though his abilities led to his being frequently employed elsewhere, he ruled efficiently through deputies. Saldar Jang, Saldat Ali's nephew and son-in-law, succeeded him, and maintained his position in Oudh, though he had constant fighting with the two Pathan powers of Robilkhand and Farrukhabad which had grown up on his western borders. Both Saadat Alt and Safdar Jang, in addition to holding the province of Oudh, were Waztes of the empire; but in 1754 the emperor Ahmad Shah deprived Saldar Jang of the latter office, in favour of a new Wasir, named Ghazi-ud-din.

The Aighans or Pathans had first become important in these Fanala-Provinces under Sher Shah Sari, himself a Pathan. The abad and Mughal emperors who succeeded him discouraged them, till that I Aurangreh made use of l'athan soldiers in the Decean. Rangash Pathan, named Muhammad Khan, who had served as governor of Malan and Allahabad, where he had failed to repel the Marathus (1729), founded the city of Fareumanan near his birthplace, and established a practically independent nower in the central Dodb. In 1740 a man of uncertain origin, ranged Ali Muhammad, who had been consolidating the Robillas, was formally appointed governor of Robinshamb. He quartelled with Safdar Jang and was bunished for a time (1745), but was allowed to return (1748), and increased bic influence considerably. When All Muhammad died (1749). Safdar Jang laid plots to annex both Rehilkhand and Farrukhstad. His first scheme was to promise Kaim Khan, Nawah of Farrakhābād, a grant of Robilkhand, if he could conquer it. The bair was taken, and the Nawab marched to Budaun and lost

his life in battle. Safdar Jang at once annexed Farrukhabad,; but Kaim Khān's brother, Ahmad Khān, drove out the governor who had been sent there, and then defeated Safdar Jang, thus acquiring a state which stretched from Aligarh to Campute. Having failed alone Safdar Jang called in the Marathas, and Ahmad Khān fled to Kumaun.

Battle of Pānīpat.

When the third Durani invasion took place (1757) the situation was as follows. The infamous Wazir, Ghazi-ud-din, had blinded and deposed the emperor, Ahmad Shah, and had set up a new ruler, named Alamgir (II), who e authority was limited to a small area round Dellu. Najib Khān, a Pathān. was in possession of the north of the present Meerut and Bareilly Divisions independently of the Rohillas, who held the rest of The central Doab was subject to the Navab of Farrukhābād, and all the rest of the Provinces outside the hills was held by the Nawab of Oudh, except Bundelkhand, which was in the power of the Marathas. Najib Khan had favoured the Durrānis, and when they withdrew to Kābul, the Wazīt, Ghāzi-ud-din, sought the aid of the Murathus to crush him. Two years later (1759) Ghāzi-ud-din murdered the Emperor, Alamgir (II), and set a pretender on the throng, though All Gauhar, afterwards known as Shah Alam (II), who had fled to Bengal, was generally recognized. The Robillas and Shuja-uddaula. Nawab of Oudh, were seriously alarmed at the growth of Hindu influence, for Jats and Rajputs had now united with the Marathas for a final struggle against the Muhammadan In 1760 Ahmad Shah Durrāni returned to India, and was joined by the Robillas and the Nawab of Oudle For two months the great armies representing the rival religious lay opposite each other near the historic site of Panapat, engaging in skirmishes, till early in 1761 a pitched battle took place, and the fortunes of Northern India were decided for a time by the crushing defeat of the Hindus,

Commencement of Hritish power. Shāh Alam had come into conflict with the English in Bihār, and in 1761 retired to Allahābād with the promise of an annual payment of 24 lakhs in lieu of the revenue of Bengal. Two years later the governor of Bengal, Mir Kāsim, caused a massacre of the British at Patna and fled to Oudh, where Shujā-ud-daula took up his cause. The allies invaded Bihār, but failed to take Patna, and were defeated at Buxar (1764). The British advanced to Allahābād, and then met Shujā-ud-daula, who had again called in the Marathās from Bundel-khand, near Jājmau in Cawmpore District. The Nawāh and his allies were defeated: and it was finally decided that Shāh Alam

phould receive Allahabad and Kora (corresponding to the present Districts of Allahabad, Campone, and Fatelipur) w. well as 16 lables a year from the regenues of Bengal, while Shuid-ud-daula undertook to pay the Reitish a contribution of 30 lakho.

Although the battle of Paniput had broken up the coalition Histor among the Hindus, it had not operated as a check on the investres incursions of the three principal members in the west of the Provinces. In the northern Doab the Sikha were continually raiding the territory held by Nahh Khan. The late seized Agra, and attempted to take Delhi (1763); the gradual increase in their power was, however, elecked by the progress of the Marathas, who occupied Delhi, where Shah Alam joined them against the advice of the Utilish. When these successes were followed up by Markthic raids in Robilkhand the situation became serious. In 1772 Sir Robert Barker met Shull-infdaula, who attempted to gain the alliance of the Rohillss: but these distrusted him, and only agreed to join when their forega were broken up by the Marathus.

The Marsthas then extorted from the wretched emperor Collapse a grant of the Allahabad territories, and in 1773 marched of the to Ramghat on the Ganges and demanded the amount due on bonds given to them twenty years before. British troops were now sent up to guard the Oudh frontier, and the Marathas were forced to leave Robilkhand, and later in the year were driven out of the Doah. The Allahabad territory was then assigned to Shuja-ud-daula, on the ground that the conperor had forfeited it be his grant to the Marathis. The Robillas had been in tripping to the end with the Marathas, and had refused to keep their engagements with Shujk-ud-dauls, by which the linglish were also to benefit, so in 1774 British troops marched through Ough, and Rahmat Khan, the Robilla leader, was defeated and killed near Mininpur Katra in Shahlahanpur, and Rohilkhand was made over to the Nawab of Oudh.

When Shuja-ud-daula was succeeded in 1775 by Anafied-Course ticula, a new treaty was made with the British, by which they obtained the sovereignty of most of the Benares Division. Meanwhile the emperor's affairs had been well managed by Micra Naial, who drove the Jais out of Aligarh, Mutur, and Agra, but had difficulty in repelling the Siths, whose yearly raids grew more and more serious. The Renates territory had remained under the rule of Rijl Chet Singh, who refused in 1785 to supply troops and pay an increased subside. Warren Hastings came to Bengres, and an attempt to arrest the Raff

led to an insurrection, which was soon quelled. Chet Singh fied and was replaced by Mahip Narayan Singh, and British administration commenced soon after.

Progress of Maratha power.

Except in the tracts liable to Sikh raids the Provinces were now fairly quiet for a few years; but the Marathan appeared again with the Savoyard soldier, De Boigne. They seized Agra, Muttra, and the northern Dosb, and foiled the last attempt made to revive Muhammadan power in 1787. The infamous Ghulam Kādir, grandson of Najib Khān, was forced back to Delhi, where he blinded the helpless old emperor, and Mughal rule was now at an end. North of Delhi a considerable area came into the power of George Thomas about 1705. The central Dolb was held by the Marithas under He Boignet, who was succeeded by Perron in 1700; and Faxrukhābād was still governed by a Nawab, who recognized the authority of the Outh government. The decline of the latter power led to the still further growth of British influence. Acal-ud-daula died in 1707, and was succeeded (after a short interval, during which his reputed son, Wazir Alt, reigned) by his brother Sazidat All, who ceded to the British the fort of Allahabad, and promised an annual subsidy of 76 laklis in return for a guarantee against invasion.

Formation of the Provinces.

At the commencement of the nincteenth century the British thus held only the present Benares Division (except South Mirzāput) and the fort of Allabābād. In 1801, when Reshilkhand and other parts of the Oudh territory were in a state of anarchy, and a grandson of Ahmad Shih Durtani was threaten ing to invade India, Saadat Ali, Nawah of Oudh, in return for a guarantee of protection, made over to the British the sn called 'Ceded Provinces,' which included the present Gorakhpur and Rohilkhand Divisions, with the Districts of Allahabad, Fatchpur, Cawnpore, Etawah, Mainpuri, Etah, the south of Mirzapur, and the Tarai parganas of the Kumaun Division. A year later the Nawab of Farrukhābād ceded his shumken dominions. Oudh was thus surrounded on all sides but the north by British territory. In 1803 war broke out with the Marāthās over events in Western India. Lord Lake, marting from Campore, conducted a brilliant campaign, in the course of which he took Aligarh by storm and occupied Delhi and Agra. The result was the acquisition from the Marathus of (1) the 'Conquered Provinces,' which included the Meerut Division, the rest of the Agra Division, and the Districts round Delhi now in the Punjab; and (2) most of the present Districts of Banda and Hamirpur, and small tracts in Jalaun, Golard, and Gwallor. The two last were restored to Sindhia in 1825. In 1816 a war with Nopal, which had been caused by the repeated attacks of the Gurkhas on Gorakhpur, ended with the ression of the Kumaun Division and Debta Dan District.

All of these tracks were at first included in the Bengal Presidency, and brought under the immediate control of the Covernor-Constatio-Council. In 1833 on Act of Parliament was passed to divide the Bengal Presidency into two parts. that lying to the north-west being called the Presidency of Agra. A Governor was appointed; but the scheme was never fully carried out, and two years later another Act authorized the appointment of a Lieutenant-Governor. The North-Western Provinces as then constituted commised the present Province of Agra, except Jhansi and most of Jalaun, and also included the Delhi territories and Almer, which had been brought under the regular administration in 1842. Mergara was added fourteen years later. In 1822 the Sauger and Nerbudda territories, which had been acquired in 1818, were formally incorporated in the Provinces. The Peshal had ceded the sovereignty over the whole of British Bundelkhand in 1812, and between 1840 and 1853 Juliusi and the rest of Itilann and a part of Hamirpur were acquired from petty rulers by lance. Outh was annexed in 1856. Immediately after the Mutiny the Delhi territories were transferred to the Punjoh, while small additions were made to Bundelkhand, part of the tard north of Oudh was given to the Nephlese, and a few villages in Bareilly and Moradabad were granted to the Nawah of Rampur. The most considerable changes since the Mutiny have been the transfer of the Sauzor and Nerbudda territorics to the Central Provinces in 1861, and of Aimer-Meratra to the Government of India in 1871; but there have also been minor changes in Ihansi and Bahraich.

The old lawlessness did not pass away at once. In 1816 National, the levy of a house tax caused a serious outbreak in Robil-tentry, khand, while in 1824 deceity increased in Sahhanpur almost to the stage of insurrection. They was rife throughout the Provinces, and for years the great rivers, which formed the principal trade routes, were infested by pirates. Two events of importance stand out beyond these matters—the annexation of Outh and the great Mutiny. In Oudly the government had steadily deteriorated, and the kingdom was only kept together by British support. The king was called on to abdicate in 1856, and on his refusal was deposed.

The Mutiny broke out at Metrut in May, 1857. It was Mutiny.

essentially a mutiny of the sepoys; but where representatives of former rulers were found, as at Bareilly, Farrukhābād, Banda, Cawnpore, Jhansi, and elsewhere, these assumed the leadership. In other places the disorder took the form of anarchy rather than the revival of native rule; Etawah District was actually administered by native officials and landowners for some time after the Collector had taken refuge at Agra-By the end of June the forts of Agra and Allahabad, and the Residency at Lucknow, were the only places still held by the British; but Campore was retaken within a month, and the recovery began. After the fall of Delhi on September 16. Greathed's column marched down through the Doals. At the same time the Lucknow garrison was reinforced, and it was relieved in November, though the city was not rataken until March, 1858. Robilkhand was then reduced, while Sir Hugh Rose advanced from Central India and took Jhansi in Auril. 1858. Rewards and punishments followed. The garrison in 1856 had consisted of about 53,000 native and only 5,200 British troops, and the latter number was raised considerably. The police force was reorganized and the population was disarmed, while forts were demolished. Subsequent disturbances have been chiefly descritics and religious riots.

Archaeology. Buddhist. The earliest archaeological remains which can be dated with certainty are the inscriptions of the great Mauryan king, Asoka, on pillars at Benares and Allabābād, and on a rock at Kālsi in Debra Dān District, which belong to the third century i.c. It is probable that the fine stūpas at Sārnāth near Henares and at Kasiā in Gorakhpur are even older, and the excavation of a stūpa at Piprahwa in Basti District has yielded a casket bearing an inscription in characters of the third, fourth, or fifth century n.c. Fragments of stone railings and buildings, coins, clay seals, and other relies of Buddhism have been found in every part of the Provinces except the Himālayas. The principal sites that have been regularly excavated are Set Mahet (Gondā), Ahichhattra (Bareilly), Sankīsā (Farrukhūbād), Muttra, and Bhuilā Dih (Basti); but many others await exploration.

Jain.

Excavations at MUTTRA have yielded Jain sculptures and fragments of Jain temples, some of which bear inscriptions dated in the time of the great Kushan kings (first or second century A.D.). In the Lalitpur taksil of Jhansi District many fine Jain temples and sculptures of the mediaeval period (900 to 1100) are still in a fair state of preservation.

Hindu.

While there are many sites in the Provinces which popular tradition identifies with places mentioned in the great epics.

the carliest nursely Hindin remains are those of the Gupta kingdom of the fourth and lifth centuries s.b. Inscriptions and a single copperplate of the early Gupta kings have been found in various places, from Gorakhpur and Glazipur on the east to East and Hulandshahr on the west. A beautiful small temple near Decears in Jhansi District is assigned to this period. The disorder which followed the break-up of the Gupta power was not favourable to the architect and builder, while the temples mised between the eighth and twelfth centuries, when Kanauj was the seat of a great Hindu dynasty. were mostly demolished or converted into masques by the Muhammalans. The remains of Hindu temples used in this way are especially noticeable at Kanauj, Jauneur, Ajodava, MUTTRA, and BENARIS. In Kumaun and Bundelkhaud, however, mediaeval temples have survived. The chief centres of Hindu religious life, at the present time, thus contain hardly any ancient Hindu buildings, and at Hardwar, Ajodhya. Henares, and Muttra most of the temples have been built recently. During the tolerant reign of Akbar some fine temples were built at Burndanan, one of which (erected about 1590) is especially magnificent. The history of the mediaeval Hindu period has been largely recovered from inscriptions and from the study of coins.

The early Muhammadans have left many memorials in the Early shape of mosques, IdgMs, and tombs. The oldest among these Mahamare some buildings constructed at Budann by the emperor Alamsh in the beginning of the thirteenth century. The finest specimens are, however, the great mosques at Jauxeus, built two hundred years later by the Shark! kings, which are particularly striking for their huge façades, recalling the propylons of Egypt.

During the sixteenth and seventeenth centuries the emperors Mughal. Akhar, Jahangir, and Shah Jahan spent large sums on the adominent of the royal residences at FATLUPUR SIKRI and Agna, where stately palaces, magnificent tombs and mosques still recall the memories of the great Mughais. Much has been done within the last few years to repair and preserve these valuable treasures. In the eighteenth century the type of archibecause deteriorated, though buildings of some beauty were built by the Robillas and the Nanabs of Oudh.

The total population of the Provinces (1901) is 47-7 Perulation. millions, and with dependent Native States 48.5 millions. The Density of pressure on the soil is greater than in any other Province uen. in India, for the number of persons per square mile in British

Districts is 445, or, excluding the nineteen largest towns in the Provinces, 427. But there are considerable radiations, The Himalayan tract, with its forest land and steep mountain sides. supports only 95 persons to the square mile, and at the opposite end of the Provinces the infertile Central Inilia plateau and hilly Mirzāpur District have an almost equal density of 197 and 192. In the submontant Districts and the great plain there is a gradual increase from west to east. western sub-Himalayan Districts have 400 persons per square mile and the eastern 561. In the Gangetic plain the density rises from 512 in the west to 549 in the centre and 718 in the east. Twelve Districts have a density of less than 400, fourteen vary between 400 and 500, and twenty-two have a higher density. In Garhwal only 70 persons are found to each square mile, while in Bullia there are 79r, though the largest form in that District contains less than 16,000 inhabitants.

Towns and villages.

There are seven cities with a population exceeding 100,000 ' namely, Lucknow (264,040), Benures (209,331), Champore (197,170), Agra (188,022), Allahabad (172,032), Barcilly (131,208), and Meerut (118,120); thirty-one towns of between 20,000 and 100,000; and seventy of between 10,000 and 20,000. The total urban population, including that of 187 places possessing urban characteristics though the population is below 5,000, is 5,273,573, or about 11 per cent of the total, which is larger than in most parts of India. The proportion of the urban population varies from 37 and 26 per cent, in Lucknew and Benares, where large cities are situated in small Districts, to less than r per cent. in SultInpur, being lowest in the eastern parts of the Provinces and in the hills. Of the cural population 37 per cent, live in villages with a population under 500, and 52 per cent, in villages of 500 to 2,000, while inhabitants of villages of 2,000 to 5,000 form to per cent. and of larger villages 1 per cent, of the total. The term 'villages' here means the revenue man a or parish. In the western just of the Provinces the village sites are usually compact groups of houses, a relic of the precautions taken against Sikh invasions during the eighteenth century. In the centre and east scattered hamlets are more common, and in Ghazipur District there are 'villages' of 10,000 to 12,000 inhabitants without any single site containing as many as 5,000.

Grawth of papulation. General estimates of the population of the Province of Agra were made in 1826 and 1848, and a Census was carried out in 1853, 1865, and 1872. In Oudh the first Census was taken in 1869. In 1881, 1891, and 1901 enumerations in both

Provinces were simultaneous with those throughout India. The variations are of devoluted value before 1869 and 1872, but it is certain that between 1853 and 1866 the population of the larger Province decreased considerably point to the Muting and to famine and disease. In 1872 there was an increase, in spite of the famine of 1868, and this Census probably understated the figures for the Benares Unvision, while on the other hand the Oudh Century of 1869 overstated the truth. According to the returns, the population of the United Provinces mee from 42,002,897 in 1872 (1869 in Oudh) to 44,707,869 in 1881; but the greater portion of this increase has been assigned to inprovenuous in enumeration, and the scarcity of 1877-8 and the fever epidemic of 1870 probably kept the population statismery. In the next ten years (1881-00) the total tose to stillogicals, an increase of 6-3 per cent. These were years of good minfall, and the distribution of variations is clearly connected with the character and position of different tracts. The period raqu-1900 was marked by two serious calamities: it began with sec years, culminating in the abnormal season of 1544, when the rainfull was 37 inches as computed with a mean of 37 inches. The following year min was bully distributed, and in 1894 the mondon ceased prematurely, causing widespread distress. The pressure of high prices was again felt in 1899 and 1900. when other turns of India were visited by severe famine. The Census of 1901 showed a population of 47,591,782, an increase of 1-7 per cent, which is little more than half the normal rate calculated in 1891. In the western plain the increase was to per cent, but the Himilayan tract was the only other portion which increased at a greater rate (2-6 per cent.) than the Profinces as a whole; the submontane tracts and the central plain increased by smaller amounts. On the other hand, the Central India plateau lost 8-4 per cent. of its population the eastern plain 7-1, and Mirapur District 6.8 per cent.

In the Central India plateau, Allahabid south of the Juma, Mizzipur, parts of Agra and Extrah and Hardot the failure of the crops, owing to throught in 1895 and 1896, was the main cause of the decrease, and would have been sufficient to affect the population reviously if the preceding scasons had been favourable; but its effects were intensified by the fact that untimaly rainfall had caused serious damage to successive harvests and thus impoined the resonness of the people. In the eastern plain and subminiance tracts, however, the predominant factor was morally due to distance caused by

excessive rain, and a corresponding decline in the birth-rate, while the damage to crops from the same cause was probably greater than the losses due to drought. The western plain and the Himalayan tracts, with small exceptions, suffered appreciably from neither fluod nor famine, and a large part of the former benefited materially from the adversity of

other regions.

There is no considerable influx of rural population into towns, and labour is often a difficult question in the few large manufacturing towns such as Camppore. Bufore British rule the growth of large towns and cities depended chiefly on religious sanctity and the site chosen as the seat of provincial governments. Renarcs, Allahabad, Bindbachal, Ajodhya, and Muttra are examples of the former. Because being one of the principal seats of the Suva cult in India, while Ajodhya and Muttra are centres of the worship of Vishnu in his incarnations as Rama and Krishna. Agra, Lucknow, Fyzabad, and Imanjur are towns which grew up round the courts of native rulers. The cities which have thriven by trade may be divided into those in which the trade is chiefly converned with the collection and distribution of produce, or of articles manufactured elsewhere, such as Barcilly, Morgat, Shihiahangur, Morādābād, Aligath (Koil), Sabiranpur, Goraklinur, and Jhānsi; and those in which manufactures have become important, such as Cawnpore, Agra, Mirzapur, and Hathras. The growth of towns is at present in a transitional state. Railways have in many cases ruined the trade of former centres of distribution, while others have prospered and new ones have been formed.

Migra-

The people are not generally disposed to move from their In 1891, 89 per cent. of the total population had been born in the Districts where they were enumerated, and in 1901 the proportion rose to nearly 91 per cent. Internal migration is chiefly due to the marriage customs of the Hindus, who contract alliances with persons living some distance away. Thus in 1891 nearly 80 per cent, of the persons who had been born omside the Districts where they were enumerated were females, while in 1901, after a succession of bad years which had caused men to wander in search of a living and had checked murriages, the proportion fell to 60 per cent. It is calculated that about 700,000 persons left for other parts of India between 1891 and 1901, while more than 100,000 were registered as emigrants to the West Indies, Fiji, and Natal, and there was a considerable exodus from the

castern submontane Districts into Neptl. The embracts are of two classes: those who so k work, or in the case of females are married, in Ubscicks adjoining the Provinces; and these who go to diesest parts of India. The latter class of emigration has beaut to be appreciable, and large numbers of persons from these Provinces are found in Assam, Bengal, Bombay, Burnet, the Central Provinces, and Hyderabad. The Districts from which they chiefly go lie cast of a line drawn through Allahabad and Frailid.

The age returns of the Ceasus are of little absolute value Age without adjustment, but are of some use for comparative pur-restition poses. Thus the proportion of Musalmans per rospos of normation is higher than that of Hindoo, in each animquennial period up to the age of fifteen, and again over the age of fifty. pointing to their greater fecundity and vitality. The distribution is appreciably affected by natural calamities, and the figures for tool show clearly the results of reduced birth-rates in 1805. following a year of feven, and in 1897 when there was famine. These results are most marked in the Districts worst affected. Thus in Ihinsi out of every to,000 of papulation only 1,010 were under the age of five, as compared with a proportion for the whole Provinces of 1,268. The age neturns also indicate the effect on population of calamities in earlier years, and show a difference between the distribution in urban and roral areas. there being a deficiency in age periods up to twenty in the latmer.

In rural areas only the few persons who are subject to the Viral law for the prevention of infanticide (Act VIII of 1870) are elements. bound to register littles and deaths. Registration is carried out by means of the village policeman or chardidar. charkidars are usually illiterate, but are sumplied with a notebook in which they get entries made, and which they take to the police station once or twice a week. The completeness of the record is checked by higher officials in the Police and Revenue departments, and also by members of the local boards, precinators, and Deputy Sanitate Commissioners. urban areas, where the Municipal or the Cantonment Act is in force, it is usually provided by rules having the force of law that the head of the family in which a birth or death occurs, and also the succept employed in the house, shall report it within a week. Registers are also kept at cemeteries and huming chile in a few towns. Failure to report is panishable with a small time. In cantonments the medical officers also are bound to report. Other urban were are under the same rules

as rural areas, but supervision is better. As a rule each-police circle is a unit of area, but places under the Municipal, Town Chaukidari, or Cantonment Acts, juils, reformatories, and lunatic asylums form separate units. Statistics are compiled in the office of the Civil Surgeon, and are forwarded through the District Magistrate to the Sanitary Commissioner. Testing by higher officials usually points to omissions varying from 2 to 3 per cent, of the number of entities tested, the rate of omission being slightly higher for births than for deaths. In periods of famine and epidemics deaths are not fully recorded. the population according to the Centus was less by 344 per cent, than the population deduced from vital statistics; but allowing for emigration the discrepancy was less than I per cent., and the number of infants under one year agreed classity with the number deduced from the vital statistics of the previous year. Over small areas migration is so considerable and so irregular, that the population at inter-equal periods cannot be calculated. The proportion of femalia born to each 1,000 of males has increased regularly from 877 in 1881 to 905 in 1891 and 931 in 1901, which indicates improvement in registration, as omusions are probably more common in the case of females.

The following table shows the ratio per 1,000 of registered births and deaths, and the mortality from characteristic discussion the three decennial years 1881, 1891, and 1901, and also in 1904:—

	Į.	Ē : [ ]		Death per tour term			
	Fapulatinn und teginktutsak	Katin of trejectory Little per Lose	Ratio of registers deaths per savas	Chulves	3 m - II - 7408.	Tria	Dyrenberg and
1904	44,107,869 46,905,085 47,692,782 47,691,782	40.34 33.26 41.36 46.67	31-79 31-14 30-30 34 70	0 11 112 240 CHSH	0 39 2-50 0 01	34:95 23:46 23:46	0.57 1.69 1.69

In 1904 the registered birth-rate per 1,000 varied from 61 in Hamfrour to 28 in Dehra Dün, and the registered death-rate from 47 in Farrakhabad to 24 in Banda.

The record of cause of death is, however, very incorrect. The chankidar classifies most diseases as fever, cholera, small pox, or bowel complaints. Returns are obtained from medical

Disease

officers, their subordinates, and from private practitioners; but the number of deaths reported in this way is too small (11,228 in 1903) to give extisfactory results. Fever, as appears from the statement given above, is usually reported to be re-parable for about 75 per cent, of the total mortality. Presequence which is common in the cold season, and many other diseases accompanied by a high temperature are included under fevel. In years of excessive rainfall the death-rate from fever incremen langely. Thus in 1894, 1,495,372 deaths were reported from this cause, and in 1897 the number was 1,463,716, as the proper classes had been enfectied by the searchy of the previous year. In the twenty-one years 1881-1901, the deaths reported from cholera have varied from 2,508 in 1898 to 200,628 in 1887. From 1881 to 1800 the average was bolods. and in the next ten years \$1,415. Deaths from small-pox averaged 54.717 in 1881-00 and 18.220 in 1801-1000, the largest number in any year being 202,341 in 1884 and the smaller of in 1901. A few cases of plague first took place in 1807, and in the following years there were small outbreaks. Early in 1901 the discuse broke out more violently in the eastern Districts, and there were 0.778 deaths, chiefly in Begares (2.061), Ballia (5.278), Allahabad (661), and Jaugur (712). The nest year there was a more serious epidemic in Compare District, where 0.753 deaths occurred, of which 6,3,16 were in the city. It has now been proved that mahimirt, which has long been known in Kumaun, where it sometimes becomes epidemic, is identical with plague. the early singles inspection on rollways and the exacuation and disinfection of houses were found useful; but as the disease stread little enally be done. Inspection on milways was abolished early in 1903, when the disease had become established in more than twenty Districts. The number of deaths from plague in 1904 was 170,082, the largest numbers occurring in Ballia (17,417) and Azamgath (16,994). In 1905 the number rose to 305,737; the worst-infected District was Muttre, where 45,644 elective from plague were recorded, and it is estimated that one-eleventh of the population were sampt away by the coldemic.

The death-rate of infants under one year of age fealculated lefter on the mean number of births during the year under report mentality. and that preceding it) was 238-4 per mills in 1881-90, 236-1 in 1891-1900, and 2327 in 1901. The lowest rate was 190-7 in 1891, and the highest 272.5 in the famine year, 1897. In 1901 the rate rose to 274, oning to the prevalence of measless.

Among Hindus some easter are divided into proups of infanticule different social standing, and a woman must marry into a group at least equal to, and if possible higher than, her own. - The females of the highest groups thus find a difficulty in obtaining suitable husbands, and among Rajouts, Tagas, Juts, Alurs, and Kons this has led to female infanticide. The crime was fistmally declared murder by Bengal Regulation XXI of 1795, and attempts were first made to stop it by reforming public opinion and taking engagements from leading Rajputs to give up the practice. These attempts failed, and after much discussion a system of registration of births and deaths, which had been tried with more success, was legalized by rules made under Act VIII of 1870. The rules, which are enforced only where the practice is found to exist, provide that the head of a proclaimed household shall report every birth and death in los family, and every illness of a female child, to the chankself, who reports such events, and also the departure of pregnant women, at the police station. Registers are kept by the pullical and checked on the spot by higher officials. In 1870, 590,560 persons were on the registers; but the number fell to 285,689 in 1881, 60,992 in 1891, and 44,173 in 1901, the decrease indicating the success obtained in checking the practice against which the rules were directed.

Informities.

The proportion of insune persons to the total population in 1901 was 1:44 per 10,000, the rate for males being double that for females. In some of the Districts watered by the large rivers flowing from the hills cretinism affects the proportion, as idiocy is not distinguished from other forms of mental discusse. This is more distinctly marked in the case of deaf mutel, whose proportion is 3.73 per 10,000 over the whole l'owinces, whereas the figure rises to 11 in Tehri, 15 in Garhnal, and 20 in Almora. Nearly 17 males and nearly 18 females out of every 10,000 nre blind, the highest proportion (about 30) being found in the central Districts. The proportion of lepers is 2-37 per 10,000, but the disease is more prevalent in hill Districts, the proportion rising to 20 in Almora. Both blindness and leprosy appear to be decreasing.

Sex Ltatistics.

The proportion of females to 1,000 males in the Provinces as a whole has risen from 925 in 1881 to 930 in 1891, and 937 In the western plan it falls to 868, while in the eastern plain it rises to 1,039. There are two well-definedareas in which the number of females is equal to, or greater than, the number of males, namely Garhwal and Tehri in the hills and a continuous group of nine eastern Districts: in Ballia

the proportion is as high as 1,084. The area where homeles are proportionately fewest is a compact group of Districts in the western plain, namely Mainpurl. Etawah, Farrukhisted, Etah, and Budaun, in which the proportion suries from \$37 to \$54. Allowing for the concealment of females at enumeration and for the effects of infanticide, both of which are probably of little effect now, and also for emigration, it appears that the proportion of females has come connexion with race, being highest where Aryan blood is diluted to a considerable extent with also riginal.

The marriage ceremony among Hindus does not usually Clot mark the commencement of conjugal life. In the highest condition castes the perturnement of marriage till the age of puberty entails social discredit, but cohabitation is deferred till the loide has attained maturity. In the lower castes the age of marriage is later, and in some of the lowest consummation is a part of the extensions. Some castes which have become Hinduized in recent times have not yet adopted the strict rule of child-marriage. The results of each Census during the period 18\$1-1901 point, however, to the conclusion that childmarriage is increasing. Taking both sexes together, only to per cent, of the population aged 13 and over are unmarried; but in the case of males 18 per cent, of Hindur and 17 per cent, of Musalmans are unmarried, while the proportion for females sinks to a and a per cent, respectively. Marriage is usually earlier in the east of the Provinces than in the west. There are also fewer unmarried persons in the east, and easter in which nurriage is latest have the largest proportion of unds. Direct prohibition against the remarriage of widows is in force only among about one quarter of the Hindu population; but where remarriage is allowed, the second merriage, though leval, is celebrated without the usual tites, and bears a different name from ordinary marriage. Widowers also marry again less frequently than in European countries. Directe is uncommon among Hindus, and if wives are just away for unclustity, they cannot remain except in the case of the lowest castes. Among Mucalmans divorce is permitted, but is strongly reprobated, and a practical check is put on it by fixing the nominal dower (which is repryable on divorce) at an amount the husband would never pay. Polygamy is allowed by many Hindu castes, and is permitted in all cases where a first wife is barren. There were 1,107 married females to 1,000 matried males among Hindus in 1901, and 1,011 autona Musalmans. The marriage of two sisters either at the same

time or one after another is not forbidden. Polyandry is prevalent in the Jamsar-Bawar pargana of Dehra Dün; but the husbands must be brothers, i.e. sons of the same set of fathers, and succession is traced through males, not through females.

Statistics of civil condition in 1891 and 1901 are given below:

	ıFğı.			hust.			
	Persons	Males.	Females.	l'arrens.	Make.	المرابط ا	
Married .	23,694,288	1,538,415	11,573,875	18,169,477 23,948,963 5,373,342	11/20/321 11/013/24/3 11/013/24/2	12.03.641 171.42,0,51 18 <sup>2</sup> 44,516.

Language.

Three distinct languages are spoken by the bulk of the people in the plains. The central portion, roughly bounded by a line drawn north and south through Banda town on the west and a parallel line through Mirzápur on the cast, is the Eastern Hinds tract, with a population of nearly 13 millions. Western Hindl is spoken by over 22 millions west of this area, and Bihari by 10 millions east of it. The official language is Urdu or Hindustāni, a dialect of Western Hindl. An educated native usually speaks Urdii to everyloody but the members and private servants of his own family, with whom he uses the language of his birthplace. Prose is written in Urdu, or in what is called High Hinds, which is identical with Urdu in grammar, but replaces all words of Arabic or Persian origin by Sanskrit. Written verse is usually in Urdii, or in the Brai dialect of Western Hindi, but Eastern Hindi is also used. The majority of the natives in all parts can understand Unia and -High Hindt, if pedantic Persian or Arabic words on the one hand, and Sanskrit words on the other, are avoided. In the hills Central Pahāti is spoken by 12 million people, and appears to be connected with the languages of Rajputana. Of languages foreign to the Provinces, English, Bengali, and Nepall, or Parbattia, are most spoken, but the proportion of speakers of each of these to the total population is small.

Language statistics for 1891 and 1901 are given in the statement on following page.

Caste, tribe, and race. (a) Hindus.

The most prominent characteristic of the Hindu caste system is that it divides the people into a large number of groups primarily distinguished by the fact that they are undo-

gamons. Within the caste or tribe (which are distinguished by liutopean students, as being based respectively on community of orcupation, and on descent from a common agressor or on common occupation of turniory) are found other distributs, usually endogeneous, which are sometimes further distributed into exagamous groups. Where exagamous groups are found,

]	Choci normaculatu ni the Procincia								
	Nim in	l'idria L'idria	Deat	Krist, Palonia, Corkish	Pertial Intak	Gifter offer	Ill-sig of Helpf I'm einter	Le, af	Estina fro-
ty.£g	w.171,581	\$4,574,765 \$1,634,765	1-y-34-4d	क्ष्यान्त्रद वक्रस्टव	१५५/व। १५५/व।			aliterte anskapn	\$2.745.2 \$4.744.7

a further distinction lies in the fact that these are often classifield by social status, and a numen must, as observed above, matery into a group equal, and, if provible, superior, to her can. The Rajput, Thakur, or Chhattri custe contains only excessmous groups, and the rule of hypergamy is here strictly observed, though the position of individual groups varies in different Internariage between members of the same endocumous division is prohibited, even where there are no excummous groups, within five degrees on the mother's side and seven on the father's. The caste system is constantly undergoing a variety of minor modifications. Thus the Mould who works only in limiter has split off from the Chamle who works raw hides. Groups from different easter have united to form the Mullith or fishing and booting casted but each group tentains endogamous. The Sadhs are an example of a more complete union, where different groups have intermarried and formed a new caste through the common tie of a new religious movement. Where browngamy is in force, neglect of the principle lowers the division or family concerned, while, on the other hand, easter ambitious to rise adopt child-marriage and probability the remarrisme of widows. A caste, the members of which are prespering, often claims to be considered as Bribman or Rilput, much as a rich Englishman discovers that his precisions came over with the Conqueror. Theoretically, the Hindus are divided into four main traster; the Brahmana or pricess, the Kshattriyas or marriers, the Valsyus or traders, all of which are called twice-born; and the Sudnes. Investiture with the second thread at the so-called second birth may be

compared with the Christian rite of confirmation. According to native thems the first three of the main castes mentioned above are Aryan, and the last of aboriginal or mixed origin. In practice, however, several castes claim rank alongside of those admitted to represent the first three main classes, and their claims are partially admitted, while many distinctions exist among the Sudras. Thus twelve classification groups can be formed, of which three represent the twice born and three more the castes allied to these, with a total of 101 millions. The seventh group, with over 750,000, includes easter definitely held not to be twice-born though higher than Sudras. Theeighth, pinth, and tenth groups, with nearly 19 pullners, includepersons from whom the twice-born (or some of them) can rake ... certain kinds of food, or can or cannot take water; while the other two groups, with to millions, include castes whose touch defiles a member of the twice-born castes, distinguished from each other by the fact that they do not or do eat beef. The largest single castes arranged in order of social precedence are Brahman (4,706,332), Rajput (3,403,576), Baniff (1,332,432), Alir (3,823,668), Lodha (1,063,741), Kahar (1,217,881), Pasi (1,239,282), and Chamar (5,800,639). No other custe numbers a million. Variations in the distribution of different castes are noted in articles on Districts.

(b) Musal-10āns.

Contact with Hindus has produced some imitation of their customs among Muhammadans. Thus there is a tendency to form endogamous groups, chiefly marked in the case of converts who still preserve a tradition of their Hindu origin; While, however, converts often retain Hindu prohibitions based on affinity, which are stricter than the rules of Islam, families of pure foreign origin intermetry within very narrow circles. Among Hindus members of different custes will ordenarily not cat articles of certain kinds of food together; but the followers of Islam observe no such restrictions, save that food or water would not be taken from a sweeper, and very strict Muhammadans refuse to eat with Christians. Musalmans may be divided into three classes: (1) the foreign tribes, Saiyid (257,241), Shaikh (1,340,057), Pathan (766,502), and Mughal (82,334). Many of these, especially the so-called Shaikhs, are remainly descended from converted Hindus. (2) Converts retaining Hindu caste munes (2,233,486), the largest castes being Rajput (402,922), Behna (356,577), Nai (219,898), Tell (207,863), and Dard (161,298), (3) Occupational groups, also chiefly of Hindu origin (1,895,176), including Julaha (898,032) and Fakir (334,762).

"The three main physical types are Drasidian, Mongaloid, Physical and Aryan. The first is found pure in South Mirsapur and character-Bundelkhand; but many cartes in the eartern and rentral Districts show the broad nose and dark colour which characterize the type. In the Arran type, which is common among the higher castes, especially in the nestern Districts, the features are more finely out, and in particular the nose is thin and the complexion fair. The majority of people show a mixture of these two types, the proportion of Dravidian blood increasing in the east. In the sub-Himilayan and Himilayan Districts the Mongoloid type is found. This is marked by n short head (the other two types being dollchoexpliate), a broad nose, prominent check-hones, and a yellow colour.

In 1901, out of a total population of 47,691,782, Hindus latigues numbered 40,691,818, or more than 85 per cent, and Musalmans 6,731,034, or 14 per cent. The total of all other religious is less than 0-6 per cent., and this includes Christians 102,460. of whom 68,641 are natives; Jains, 84,401; Aryns, 65,282; Sikha, 15.319. The Musalmans dwelling in the Provinces are more prolific than the Hindus, and longer lived, partly no doubt because they are, on the whole, better off, enjoy a more liberal diet, form a large proportion of the total in the more prosperous western Districts, do not practise child-marriage largely, and allow remarriage of widows. They are, therefore, increasing faster than the Hindus; but there is no reason to suppose that any considerable number of persons are being converted to Islam at the present time. On the other hand, the Hindus lose by conversion to Christianity and the Arya Samil.

The term Hinduism includes in these Provinces an immense Hadelen variety of ideas and beliefs, which vary in character from systems founded on the deepest philosophical speculations to Animistic tenets little advanced beyond those of the wild jungle tribes in Central India, though the nersons who profess the latter stoutly advance a claim to be considered Hindux. The absence of degree readers it impossible to embody the tenuts of Hinduism in a definite exceds and the sanctity attached to Brithmans and coass, which is perhaps the most prevalent distinguishing feature of the system, is not recognized by some classes universally regarded as within the pale. For convenience the Vedantists may be considered as the orthodox rehool, and their creed may be summed up as a belief in the uniformity of the nature of God, soul, and matter, the present world being an illusion caused by will. The encalled erctarian divisions of Hindnism have usually been formed by a

tendency to recognize a personal God, and they may be grouped into those who especially regard Siva as supreme and those who render similar allegiance to Vishnu. among these there is a constant tendency to relapse into No estimate can be given of the number of orthodox Hindus; but it is certainly not large, as the fundamental ideas are too difficult to be comprehended by the masses. In 1901 only 1,190,001 persons declared themselves as Saiva sectarians, and 2,571,232 as Vanshravas, majority of Hindus incline to a behef in a personal God; but this belief is very vaguely defined, and for the circumstances of everyday life much more importance is attached to imploring the aid of benevolent minor detties, or aversing the influence of demons, than to devotion to a supreme being. The doctrine of transmigration is firmly held by all clustes of Hindus from the highest to the lowest, and the build that a man shall reap as he has sown is an appreciable factor in ... the moral sanction; it is especially powerful in the interbackward tracts of Kumaun and Bundelkhand.

Arya Samāj.

The Arya Samar, which was founded about 1875 in Hombay. has prospered in these Provinces, and its adherents in 1901 had almost trebled their number some 1301. They are found chiefly in the three western Divisions of Meerut, Agra, and Robikhand, and commonly belong to the higher caster. The distinguishing features of this reforming movement are monotheism, the rejection of the divine inspiration of all Hindu sacred books except the hymns of the Vedas, the probabilition of idol worship, and the discouragement of most of the ritual observed by Hindus. The Samai also aims at social improvements, especially the spread of education, the raising of the age at which marriage takes place, the nematriage of widows, and the simplification of restrictions based on caste custom. Hindu sect of recent origin called Rollal Swami was recorded in the Census of 1901 as having more than 15,000 milhurents, 3 and its tenets are remarkable as showing some resemblance to the Christian doctrine of the Trinity, though it is evidently a development of the Kabirpanthi sect of Vaishnavism. these reforming movements have been strenuously opposed by the orthodox Hindus, and in particular by the Bridmans, whose authority they threaten.

Islam.

The two principal sects of Muhammadans in these Provinces are the Sunnis (6,430,766) and Shiahs (183,208), while Musalman sweepers, who have a special cult, numbered 64,2927. The most marked distinctions between Sunnis and Shiahs are

in ritual, and in the related of the latter to recognize Alm Rake. Once, and Otherin as thecesons to the Prophet. Waltship one very lest, and the sect founded recently by Chulim Ahmad of Kadian in the Panish has made little progress.

A Roman Catholic priest from Beneal first visited Agra in Chawara 1478, and other missions followed, but were not very successful, markets Protestant influence commenced with the solutory conversion made by Henry Martyn at Camprone in 1810. The Baptist Micsion Society entered the field in 1811, followed by the Church Missionary Society at Agra (1813), at Meenn (1815), and of Bengrey (1818). Native Christians have increased from 23,406 in 1391 to 68,841 in 1901, the increase occurring almost entirely in the American Methodist Enisconal Church. which commenced operations in 1820, and labours chiefly in the western Districts, its converts being mostly from low custes.

The whole of the Provinces is included in the Anclican see of the Bishon of Lucknow, who resides at Allahabad. Roman Catholic Archbishop has his head quarters at Agra and a Histor at Allahabad.

The statistics of the population belonging to the chief religions in that and toot are given below:-

Facts,	Hiedes	Bouleire	Chibduses Tesul Hutiers		Oiler
rfyr	40,379,907	6,346,620	68.437	42,434	160'212
1901	40,691,518	6,731,034	107.474	74,847	

In the Census of 1952, 16,212,668 males and 7,005,539 Occupafemales were recorded as actual workers, and 24,383,575 then. persons of both series us dependants. Of the former 10,643,272 mules and 1.203.314 females were supporting themselves. and also 16,247,720 dependents, by agriculture and pasture, so that these two eroups of occupations are the principal means of salwistence of two-thirds of the population. Propnetary interests in land support 3.441.879 persons, while 22.907.660 are tenunts and 4.363.772 are field labourers, about one-sixth being regular farm servants. About a million reprons were shown as non-agricultural labouters and their dependents; 2.678.314 were supported by personal, household, or sanitary service; and 2,650,282 were engaged in the provision of food. drink, and stimulants, more than three-quarters of these being recupied with the provision of vegetable food. Of 1.800.129 nersons dependent on occurations connected with textile

fabrics and dress, 947,873 were supported by hand-weaving of cotton goods, and 318,984 more by tailoring and darning, The number of persons occupied with the preparation and supply of material substances of all kinds was 7,134,280. Of these, 76,015 were dependent on occupations carried on in factories, the principal classes being sugar refineries (31,973). cotton-ginning, cleaning, and pressing mills (13,806), spinning and weaving mills (1,480), printing presses (6,696), lac factories (4,942), distilleries (4,058), and indigo factories (3,997). The commercial population numbered only 366.545, while the professional classes numbered 622,184, of whom 228,986 tree recorded as priests, ministers, &c., 40,016 as lawyers, 23,070 as medical practitioners without diplomat, and 17,05: as midwises; as many as 606,870 persons are supported by ordinary begging. while \$5,454 are religious mendicants. The number of females returned as actual workers is greater than the number of malesin the case of field labourers, and is considerable in the case of grain-parching, oil-pressing, weaving and spinning of cotton (hand industries), basket-making, and general manual labour. In cities the number of female workers in only 30 per cent, of the number of males, as compared with 44 per cent. for urban and rural areas together.

Food.

The two principal meals are taken in the morning and evening, and consist of unleavened cakes called chaptitis, made of the flour of wheat, barley, or millet (Migra, foreign, or mandua), according to the means of the consumer. With these are eaten vegetables and pulse mosked with clarified butter (ght). Rice is often substituted in the central and eastern Districts, but is less used in the west, except by the well-to-do. Sweet cakes are eaten in the middle of the day or early afternoon, and often at the evening meal. Mutton and beef are universally used by the Musalmans, and mutton by high-caste Hindus of the Saiva sects, and by lower caste Hindus when they can afford it. The poorest classes make their principal meal in the evening, and in the morning cat some parched grain or gram in the western Districts, barley or rice in the central and eastern, and maize everywhere. Mungoes and, where found, the mahua flower (Bassia latifolia), form an important addition in the hot season. Potatoes are commonly eaten in the hills, and their use is spreading in the plains.

Dress.

The characteristic article of dress for a male Hindu is the ahort, consisting of a piece of cotton about 5 yards by 12, woven in one piece, which is wound round the waist, the width hanging below the knees and the ends being tucked in; above

this is from a rost of coal or a shirt. The upper classes wear both shirt and coat, and the use of trousers is increasing among religated men, though the dhost is still worn at home. hills rough woollen cloth is much used. The usual head-dress is a turban, often of large size in the west; caps are largely warn by the younger generation. Musclimans wear trousers or drawers, right below the knee and fuller at the waist. They button their coats to the left instead of to the right like Hindus and Europeans. Females not observing Aurda wear a dhott in the east and south-west. It is wide enough to reach from the waist to the ankles, and is so long that one end can be brought over the upper part of the body and head, while a loose hodice is also worn, though not universally. In the east it is generally undied; but in Bundelkhand red is a favourite colour. In the west a coloured perticoat is worn, with a very short tight bodice, and a sheet covering the head and upper part of the body.

In the hills, in Bundelkhand, and in parts of Muttra and Dwell-Agm Districts stone is the ordinary building material. where bricks, burnt or sun-dried, mud, and wattles are used. Burnt bricks are, however, a luxury. The ordinary type of house contains a small courtyard with a sitting-room opening from it, which is also the bedroom for the males, besides an inner room for females, and a few small store-rooms. the Meerut and Rohilkhand Divisions the apartments of from ten to twenty families are often built round a large central court. In the submontane Districts, where minfall is heavy the walls of buts are of brushwood plastered with mud. In the wast flat roofs are used; but elsewhere houses are thatched or tiled.

Hindus cremate their dead as a rule. Ascetics are buried, Disposal and also children who die unmarried and persons dving of of dead. small-nox, while some of the lower castes always bury their dead. The ashes are thrown after cremation into some sacred river, if possible the Ganges, but the poor hum comses very imperfectly and throw them half-consumed into a river or even a canal. Musulmans always practise inhumation, and look on cremation as disgraceful. They also mise memorial stones or buildings, while Hindus do not, save in exceptional cases.

. Children's games are usually marbles or forms of tip-cat; Amusebut tricket and football, especially the former, are becoming ments very popular in towns and villages where schools exist. flying is practiced by both children and adults. Chress is played, with some variations from European rules; but a c.r. z.

commones game is fachist, a kind of for and guest. Cond games are not much played, but are said to be becoming more popular. Gambling with dire and more mimitive applicaces is chiefly confined to the lower classes. Pigeon-flying and fightbetween partifiges or qualls are popular. Shooting, as a sport. is practically confined to Gurkhas, Rajjanta, and the better class Muhammadans; but there are professional bunths castes and gipsy tribes who trop vernun and small game Theatrical performances have been retired within the last fifts years; but the performers are usually Benealts or Parsis, and females rarely appear on the stage. Conjuters. buffoons, acrobats, and the like are common. The Hindust are very fond of recitations from their sacred books, imperially the Ramayana, and of ballads about herees of bygone thirs, while Musulmans collect for readings on religious autificities Private reading for amusement or instruction is exceptional.

Festivals.

Among Hindus festivals largely take the plane of other amusements. They celclimate the commencement of uning early in February, and six weeks later the Hoti begins, the generating among the lower classes into a securnalia. 'It August the twice-horn castes put on a new sacred thread, and all castes the coloured threads round their wrists. The presidest festival of the year is the Dasahra or Kam Lula in September or October, when the story of the Ramayana is recited and acted during a week, the final triumph of Rama being celebrated with many freworks and much noise. In November the full moon of the month of Kartik marks the harvest-hour and commencement of winter. Many other festivals take place in different localities; and at the sacred places there are special days for bathing in river or tank, when the lower and middle classes combine pleasure with devotion. Cally-dressed erowis visit the booths in the fair to make purchases and see peopshows and other small entertainments. The Muhammadana commemorate the death of Hasan and Husain by carrying latin and paper models of tombs to a place known as Karbala near each town, where they are buried or thrown into rivers. Though the anniversary is one for Shiahs, the Sunnis join, and it is considered a holiday. The Idul-fite marks the end of Ramzan, the month of fasting, and the Id-uz-Zulin commemorates the sacrifice of Ishmael by Abraham. The death of the Prophet (Bara Walat), and the day on which the destinies of mankind for the succeeding year are believed to be fixed (Shab-i-barāt) and prayers are offered for the doad, are also observed. The lower classes flock to the shrines

one time is small when judged by European mandards; hat there is reason to believe (though the matter has not yet been fully worked out) that the process of murification is much monrapid than in colder climates, so that the small supply is more often renewed. The classification of soils recognized by the agricultural community is rand (thur or talea), learn (damet, doras or raush), and clay (matior). A light loam which prevails over large areas is known as pilla or fileta; while the stiffest cultivable clays, smable only for inferior rice, have various local names. The heariest clays constitute the roil known as usar, which is impervious to water and improve he tilled by the simple methods at the ordinary cultivator's disposal: some usar tracts have the further disadventage of containing such quantities of sulplate and carbonate of seeks as to render cultivation and of the question without messure of reclamation which are beyond the means of the people and the permanent efficuely of which is still uncertain. A cro-siclassification of soils, depending on the distance from the village site, is recognized over the greater part of the Province-y the thoroughly manured home lands (rain) or sauthant being . distinguished from the outlying fields (barka or fale), while in some localities a middle some (manifular or exterior) in alsodistinguished. This classification disappears towards the north iand west of the plain, where current agricultural practices requires that the manuse should be distributed over the whole village area and not concentrated on the fields mearest the site.

The soils of the Central Indian alluvium, found principally in the BUNDLEHAND Districts and derived mainly from the denudation of the Central India plateau, differ more widely in composition. The most characteristic is the 'black soil' (mir) with its lighter variant (kābar): it contains exceptional quantities of lime and sulphure acid. The other soils in this region are a light loam (purva) resembling in general character the soils of the main alluvium, and a pravelly soil 'polar' which is ordinarily very inferior.

Conformation of surface.

The conformation of the surface in the hill Districts varies from place to place, the minute fields being terrared whenever the slopes are sufficiently gentle to allow of it. The main alluvium slopes generally from the north and west: its flatness is broken by occasional sand hills, by depressions which form more or less adequate drainage lines, and by the broad calleys of the larger rivers, often several miles in width, with the shifting river-bed occupying a comparatively small portion of the valley. The Central Indian alluvium is broken, especially

feature of the system of cropping is the extent to when plants of the order Legaminosae enter into the rotations adopted; the system has so developed as to secure a frequent renewal of the supply of nitrogen assimilated from the air by certain micro-organisms which dwell on the roots of plants of this order.

In the Himālayan tract there are usually two harvests in the year. Ordinarily rice and manduā (Eleusine caracana) are soon in April or May and reaped in September; while wheat, butley, mustard, and pulses are sown in November and reaped in April. But the periods vary with the altitude. In very high altitudes the spring crop does not ripen till August. On the low, warm, and irrigated lands rice and wheat are grown in rotation during the year. On the higher, unirrigated lands there is usually a two years' rotation of rice, wheat, and manduā.

In Bundelkhand the system of cultivation is less varied than in the great plane; there is very little irrigation, and it is not usual to take two crops in the year. The autumn crops are mainly the great millet, cotton, and some of the smaller millets; in the winter the small pulse known as grain or chappe (Civer arietinum) is almost universally grown. Formerly large meas were under wheat; but the growth of this crop has fallen off to a great extent since the losses by rost in 1893 and 1894. Another serious loss has been the abandonment of the cultivation of Aleriada Another, which was widely grown for the strailet dye (11) which it yields, and which involved such thorough cultivation as to benefit the land materially. The competition of artificial dyes has now rendered the production of Alumprofitable.

Priple that threatent on the color

Nearly 32 million persons were returned in 1901 as dependent on justime and agriculture, or more than 66 per cent of the total population. The actual workers included in thra: groups number 44 per cent, of the male population of the Provinces and 20 per cent, of the female. In addition to then, out of 7-9 million workers who declared their principal correspond to be unconnected with the land, nearly 700,000 recorded agriculture as a subsidiary occupation. 23 millions, or about 49 per cent, of the total, were dependent on cultivation as destinet from proprietary rights, and more then 4 millions or 9 per cent, on agricultural labour, one-siMit of these being regularly employed farm servants and their detendants Women and children take a great part in agricultural labour. In the totals for the Provinces the number in langle nothers is 44 per cent, of the males, while in the ters of agricultural labour it is 60 per cent. Non-workers of dependency who declare enterly remen and children, form in per cent, of the tetal population, but only as per come of the population supported by approximal labour,

The tuple lind-grains are then object, grain (Char arieties et, mariluthey, finds (Andrichym Sorghum of Sorghum enlight), butkifes (Penitstan Officideum), and maire tiles Mig it

Rice is grown during the rains, mostly in low-lying heavy tice. claye. The cost is provin your after year on the same lend. but a minute pulse is frequently taken in the interval between two rice trops. There are nearly varieties; but the principal distinction is between these some broadens and those transplanual, the latter being the finer kinds. King is seen broadcast when the fields have been thoroughly waked with rain; but in parts of Outh it is soon as room as the land can he ploughed and the seed left to germinate when sufficient min falls. The first varieties are soon in purposies, and the wedlings are transplanted into fields on a high water is retained by low embankments. Manuring of the fields is not usual. but the accel-beds are as a rule bravily manuscal. The early whiches are irrigated only in years of drought; the later vadeties are usually infigated after the raine have raced. capacibily where there is a water supply from canala. Ricoccupies about its per cent, of the compand was of the Provinces (6 million acres in 1927-4), and fields from 7 in to cut per sere. It is soun in June and July, and harvested from August to December.

Wheat is grown in the winter, usually after a rains crop in When the preceding year, so that the land lies follow for about elevan months, or for six months if the previous crop incloded arises. It is frequently, but not always, manufed with conduct and house refuse, and is irrigated two or three times in the greater part of the Provinces. It occupies about 18 per cent, of the property area of the Provinces is million acres in 1903-4), and yields from 7 to 11 ext. per acre. It is soon at the end of October or the beginning of November, and harvested in March and April

Geam is grown in the winter, either alone or nated with Genbarley; it frequently follows rice or an early natural erop in the come year. It is sown as a rule without manure or dright than, but canal water is conscious applied once or even twice in the nestern Dichriets. Altogether grain covers wheat 14 per vent of the cropped area of the Provinces (5) mellion acres in 1903-4); the yield is not very well accommode but may be tout at from 7 to 9 cal. per note. farity.

Barley is usually grown mixed with gram or peas, and occasionally with wheat. When grown alone or mixed with wheat the rotation is commonly the same as with the latter crop, but when grown with pulses it frequently follows a rains crop, grown in the same year. It is not as a rule manured, and is often grown on unirrigated land; when irrigated it gets as a rule only one or two waterings. Altogether it occupies about 10 per cent, of the cropped area of the Provinces, and yields from 8 to 12 cwt. per acre.

∫i≔ ir.

Jacair is a high-growing millet, sown when the rains break and harve-sted in November. It usually follows wheat or some other winter crop, and is seldom grown alone except for fodder. The usual mixtures are arthur and some of the creeping autumn pulses. The crop is not irrigated, though a watering may be needed to tide over a drought; it is frequently, but not universally, manured. It occupies about 6 per cent. of the cropped area of the Provinces, and yields from 5 to 6 cwt. per acre.

Majer

Bijra occupies the same place in rotation as jorear, but is usually grown on the lighter soils and is much less frequently manured. It occupies on the whole about the same area as jorear; but its yield is slightly less (4 to 5 cwt. per acre).

Make.

Manze is one of the earliest rains crops sown: in canal tracts it is sown some time before the rains break. It is never intigated after the rains have begun except in times of actual drought. Manure is usually applied. The crop is grown after almost any winter crop, and having a short season of growth (it is harvested in August) is usually followed by a winter crop in the raine year. It occupies nearly 5 per cent, of the cropped area of the Provinces (2.2 million acres in 1903-4). The out-turn is ordinarily put at from 8 to 10 cmt, per acre; but this estimate is frequently exceeded.

स्तर्य हैं योज्येत्र किल्केन इंक्ष्प्रकेट

The most important subsidiary food-crop is arhar (Cajanus indicas), which is almost universally sown mixed not only with you is and Isfan but also with cotton. It is sown when the mins break, and when the earlier crops have been removed arises alone occupies the field till the end of April: its special importance in rotation is due to its value as a host plant for the nitrogen-fixing micro organisms. It is rarely grown alone; when no grown its yield may be put at from 0 to 7 cwt. per, acre. Numerous small millets are grown in the rains, with the object of teplenishing the food-store at the earliest possible moment they mature usually by the end of August. The most important are rared or rotadud (Eleusier coracona), savon (Panicum fravantescars), and Lason (Paspalum scrobiaulatum). Taken

together these occupy a per cent, of the enoughed area, the yield of marks is a to to total of clade to to 7 cml, and of Lesling 7 to 9 cmt. per acte. Mandal is the principal local cron of large tracts in the Himblayas. The creening pulses rules (Phantele) Mungo), and or mild (P. rodiatos), redl (P. aceri tischer), and lesia (Figna Cations) are as a rule grown with jotely and litra, though and and reads are also sown alone, the former on better, the latter on power, toils. These pulses ore never inigated and rarely if ever manufed; their vield varies from a to 7 cm, per acre, moth (the concret grain) being the heaviest crop. The winter pulses besides gram are neas, maxir, and kitari. Two species of pea (Phum softem and P. arreste) are largely grown in the east of the Provinces, but are rarely seen in the north and west; they are usually migsted once, but otherwise are grown like gram. The yield is cometimes as much as 10 cm, per nere: but 8 cm, is a more usual figure. Master or leatil (Errors Leas) is grown mainly in the damper parts of the Provinces, usually after autumn rice; it is rarely If ever manured, and only occasionally irrigated. The out-turn may be put at from 5 to 6 cut, per acre. Kisiri (Luthyrus tatious) is grown without manure or irrigation on the worst land in the south and east of the Provinces. Its out-turn has not been determined. Consumption of this pulse, except in small quantifies, is known to lead to paralysis. An immense number of varieties of gourds, melons, and encumbers are grown very widely in the hot reason and early rains, forming a valuable addition to the food-supply. Further subadiary crops are vanis, buckwheat, singlifus (water-nut), and length (egg-plant). The total average production of feed-crops it estimated at a little more than 123 million tons, and the surplus, after providing for food, seed, cattle, and wastage, at about 12 million tons.

The principal oilseeds are second on till (Second indians), Oberta several varieties of mustard or rape (Hearma carepaters and B. funca), linseed (Linux unitalisainus), and caster (Rianus correcties). The is grown by itself as a mine crop on a large scale in liandelkhand and in the submontane Districts, but all over the Provinces it is mixed with the unlinary rains cropatach cultivator sowing enough for his own needs. When grown alone it is not manured and yields only 2 to 3 cut, per acre. The ordinary varieties of upc are almost unaversally town in lines through the fields of sheat, barley, and gram. A variety named Wife grown alone in the submontanc traces, yields about 5 cut, of seed per acre. Linseed is grown by itself in Burdel.

khand and in the submontane Districts; in the rest of the Produces it is grown as a border to wheat-fields or in lines through gram. When sown alone it frequently follows rice, or is grown with very little tillage on land that has been flooded during the rains. It is very rarely manured and irrigation is runsual. The yield is from 4 to 5 cwt. per acre. Castor is grown mainly as a border to sugar-cane or mixed with rains crops.

Librer

Cotton is by far the most important fibre, occupying 3 per cent of the cropped area of the Provinces. It is grown as a rains crap, usually without irrigation; but where carral water is available it is sown with irrigation before the monsoon breaks. It is not usually arrigated later unless the rains fail. It is grown after a winter crop and is generally manured. The yield is from to nearly a ext. of lint (cleaned) per acre; but this estimate is very doubtful, as the lengthy period of picking makes it hard to calculate the out-turn. Hemp or san (Crotoloria juncta) is grown frequently as a border to other rains crops, but its cultination as a sale crop is extending as it is an excellent preparation for augur-cane It is not manured or irrigated: the yield is about 7 cwt of clean fibre per nere. Roselle hemp (Hibiscus oranabinus) is grown almost always as a border to other talus compa; it gives a softer, but weaker, fibre than the first-named plant

\_ ajāni\* \_ ajāni\* \_ i i i i i i The optum poppy (Papacer sommfers.m) is grown as a winter crop with high cultivation, usually after maize or some other early rains crop. The land is heavily manured with cowding, or a top dressing of cride saltpetre is used: irrigation is almost universal, and well water is preferred in consequence of the salts which it contains. The out-turn of crude opium is about so the per acre. A coarse tobacco is grown round most village attended to the distribution of the per acre. The out-turn is from 12 to 15 cwt. per acre.

100

Sugar-came is a very important erop, occupying nearly 3 per cent of the cropped area. There are three main races: the cold, the gamma, and the paumaa cames. The first are thin hard cames used only for sugar manufacture; the third are thick will causs used mainly for chewing; while the gamma cames are used chiefly for manufacture, but partly also for chewing. The crop occupies the land for periods varying from twelve to eighteen or twenty-four months, according as it follows a spring crop, an autumn crop with a spring fallow, or a spring crop with a year's follow. It is heavily manufed, and only in low-land lands is irrigation dispensed with. The out-turn of unaction dispensed with, according to the out-turn of unaction, designs rapics from 15 to 25 cmt, per acre.

Indigo cultivation is rapidly declining. The cultivated mea leaders han fallen from egologo veres in 1894 to 140,833 in 1703-4. It is sown either in the spring or at the commencement of the rains. In the furnice case it is ready for cutting in August, in the latter a month litter.

Among cultivated fruits are the following: mango (Man Feats and gifera indico), mahud (Bastla latifella), pseum (Eugenia regerali-Janilelana), pomegrapate (Punite Grandars), peach (Prunus Jerika), laquit (Eristatrya jafania), contard-apple (Anna meanaid), guava (Paldium Guraza), jacketree (Arthurfui integrificial, tomarind (Tamarindus Instas), pineapple (Ana nus sutiro), plantoin (Musa sopientum), ebaddock (Citeus determined, and several varieties of fig. melon, orange, have, and rition. Vegetable, are everywhere cultivated in garden plots for bousehold use, and on a larger scale in the neighbourhood of towns. Among regetables the following may be mentioned. the epoplant (Selanum Melongens), pointo, cabbige, cauli flower, midish, onion, garlie, turnly, carrot, yams, and a great variety of encuebline-ous plants, including Countrie satures, Lagenaria taulgarie, Trickosauthes dische, Renincata cerifera. Poliches Lablac, and Prichosanthes arguina.

The greater part of the Powinces is highly cultivated, and Execthere is room for considerable extension only in the submontane decrees tracts, which are stendily filling up. Cultivation fell off seriously in soluin the Agra Division about the year 1888, owing to water-legging vetter. caused by a cycle of years of heavy tainfall; the draining system of the country was improved and cultivation has one recovered. Rust and drought in the past decade caused a vary -cribus decrease in the cultivated area of Bundellahand, but cultivation is now again extending. In the rest of the Provinces the area tilled is not liable to violent fluctuations, but in any reason it varies with the rainfall.

In a large part of the Provinces, sead is antiparity relected beginnefor those crops which require only a small quantity to the actr. Post !rigi single heads of jourte and single cubs of maire are regu-. larly set aside for seed. Selection for crops which require much seed (e.g. wheat) is practised only in the Meerat Division . New varieties of crops have not been introduced to such an extent as to affect materially the agriculture of the Province-Outs have secured a place in the rotation near military stations. 'Potatoes were first introduced in the hills and then spread. about 1830, to the plaine, they are grown chiefly in the vicinity of the larger towns: Farmkhallad in particular is noted for this crops. The thick sugar cane, grown near torms for rale for

rhewing, is believed to have been introduced from Mauritius, Vegetables are grown by market-pardeners near the towns where there is a Furopean population; and large quantities of seed are purchased yearly from the Government gardens at Saharan-pur and Lucknow. Foreign varieties of many staples have been tried at various times; but, with the exceptions noted above, few have been successful. The present policy of the Agricultural department lies rather in the direction of supplying the cultivators with good seed of the kinds they know, or of kinds known in other parts of the Provinces; thus the soft white wheat of the Mecrut Division is now being grown with satisfactory posults on considerable areas in the south of Oudh.

ಸ್ಟ್ರೋಪ್ ! ಬ್ರಾಪ್ ಸ್ಟ್ರ್ಯ್ ಬ್ರಾಪ್ಟ್ ಸ್ಟ್ರ್ಯ್ಸ್ಟ್

The plough used by cultivators is substantially a wedge of rood with an iron curter in front; its size depends on the strength of the local cattle. It stirs the soil without inverting it, and is well adapted to produce a thorough, but shallow, tilth, Where deep tillage is required the land is usually dug up with a In Bundelkhand a rough bullock-hoe (hākhar) is often wed in place of a plough for breaking up the soil and eradicating weeds. For harrowing, a heavy beam or cylindrical roller or two parallel beams joined together are used; for weeding and horing, the fice, stude, spird, or sickle is employed. agricultural implements are of the simplest, and no improved implements offered by the Agricultural department have been accepted to any appreciable extent by the people. Iron canecrushing milk were introduced as a commercial enterprise and immediately proved acceptable; they have non practically replaced their stone and wood predecessors.

Images to paragraph Planes Partly owing to lack of agencies for disseminating knowledge, and partly to the need of detailed study of agriculture in its lead aspects as a preliminary to undertaking improvements, the Agricultural department, while affording advice and assistance to a very large number of individuals, has not influenced the agriculture of the Provinces as a whole. Model farms are now being started in the Districts. The farm at Compose is used solely for purposes of study and experiments; while the public demonstration farm at Mearit, and the small farms kept up to one or two landholders on lines suggested by the department, influence the cultivators only in the immediate neighbourhood.

The cultivation of tea was successfully established in the first half of the unreteenth century in Pelira Dan and the Eumatin District at Concument gardens which were sold after ten years' working. The area under tea in 1903-4 was 8,300 nerve. Fruit gardens were established at various places in the

Outer Himalayas about 1370, and apples, peurs, peuches, and enticols are grown adocciofully.

Logins are made under the Land Improvement Act (1863) Agriculon the Agriculturists' Loans Act (1884), the former being chiefly total leave by wells, tanks, and occasionally protective works, and the layer for purchase of seed and cattle. Interest is charged at 64 per cent, but in time of lamine and scarcity the interest is reduced or remitted altozether. The amounts advanced vary anaderably, but loans for send and cattle are usually treble those for improvements. In ordinary years the former vary from 2 to 6 laklis and the latter from Rs. 70,000 to Rs. 2,00,000. In the famine year 1896-7 nearly 17 lakhs was advanced for improvements (S lakhs free of intenst), and nearly 23 lakhs for sted and cattle. During the ten years from (Bot to 1909). the advances averaged a lakks and 6 lakks respectively, while in 1901 the amounts were only Rs. 23,000 and Rs. 78,000. In 1903-1, 1-3 lablis was advanced for improvements and 1-2 lakin for send and eattle.

In the cold season of 1900-1 preliminary inquiries were Agriculmade as to the prospects of co-operative banks, but the move-banks. ment is still in its infancy. A special officer was appointed towards the class of 1994 to commence organized operations. No reliable statistics are available to show the extent to which the cultivators are indebted. As in most countries they work principally on borrowed capital, but in the Mocrus Division a large proportion of the cultivators are mactically free from debt. The village bankers are commonly professional money-lenders, but samindira and well-to-do cultivators (e.g. Jus in the wastern and Kurms in the central and eastern Districts) often do a large business. The advances consist largely of grain, which is lent nominally at 25 per cent, interest and sometimes 50 per cent, but this is increased by the method of account: the gmin is lent when prices are high and the horrower is debited with the cash value, while it is recovered in kind at horsest time when prices have fallen. Advances are regularly made by sugar-refiners to cultivators of sugar and by undigo planters for indico. A more important system of advances is that worked by the Opium department, which distributed nearly 215 laklisin 1903 for opiem cultivation, besides nearly a takh for r clis.

The only recognized breeds of cattle are found in the sub-Catte. montane tracts in the north, and in the Bundelkhand Districts in the worth, in both of which areas there is sufficient produc tive land uncultivated to supply grazing for young stock.

the rest of the Provinces, where population is denser and the land is occupied by crops, pasture is so deficient that cultivators usually buy their working eattle at an age when they can be used at once. The ones are served by any bull that may be exalable, and no attempt is made to keep the breed nure. The caule of Mecrut and Robilkhand are large animals, chiefly imported from the Punjals or Rajpatana, good bullocks costing from Rs. 150 to Rs. 200 n pair, and a cow from Rs. 20 to Rs. 40. Passing cast down the Doah, the type deteriorates. Inwouthern Oudh and the cartern Districts the name dishta or 'local' is applied to all catalo of no particular breed; they are very inferior and cost from Rs. 20 to Rs. 40 a pair. In the submontanc tracts the best-known breeds and: the pancear in Pubblit District: the tarcher, blur, khairtearh, and majhra in Khert, the bangar in Shahjahanpur and Hardor; and the nan-Arn and rais in Bahmich. The price of these sometimes reaches Rs 250 a pair. In Bundalkhand the typical cattle are of medium size, bardy and active, and able to subsist on very saturty food. They find a ready market in the Eastern Doab and Southern Oudh, where grazing and fodder are scarce.

Of the strip of land at the base of the Himalaya called the Impation. Uhabar alone can'it be said that without irrigation there could be no cultivation, though it might be added that in the dry western tracts there would be little cultivation of value. Generally speaking, irrigation is required for certain crops in all years and for all crops in years of drought. Garden crops and hotseason crops require constant irrigation. Poppy and sugarcane are orrigated many times on all except damp, low-lying soils; wheat is generally irrigated twice, sometimes three or four times. Nearly all crops are irrigated in canal tracts. Autumn crops, especially rice, are irrigated when there is a break in the rains, particularly where water can be obtained from canals or jkile; and temporary wells are dug in large numbers in most places on emergency. In the heavier soils unmanured fields are irrigated; in the lighter soils only the manured fields as a rule.

The principal irrigation works of the Provinces are four Canals, canals, two of which, the Upper and Lower Ganges Canals, General descripare drawn from the Ganges, while the other two, the Eastern tion, JUMNA and AGRA CANALS, are drawn from the lumnu. These are all classed as 'major' works. The first three serve the Doan from the southern part of Spharaupur to Allahabad, and the Agra Canal irrigates in these Provinces the Districts of Mattra and Agra south and west of the Jumna. These four systems included in 1904, 1,383 miles of main channel and branches, out of a total of 1,551 in the Provinces, and

7,066 miles of distributaries out of a total of 8,081, while they irrigated about 93 per cent. of the area supplied by canals. In the south-west of the Provinces the Betwä and Ken Canals, protective works drawn from the rivers of those names, supply parts of the Districts of Jhānsi, Hamirpur, Jālaun, and Bāndā, while small areas in Jhānsi and Hamirpur are irrigated from reservoirs which were made by damming up valleys many hundred years ago. The 'minor' works include some small canals in Dehm Dūn, Bijnor, Bareilly, Pilībhīt, and Nainī Tal.

Revenue.

Charges for irrigation from Government canals are levied by (1) occupiers' rates, and (2) owners' rates. The former vary according to the crop; and where it is necessary to raise the water the rates are usually half of those charged where the water can flow direct on to the land. On the funr 'major' works and on the Betwa Canal the 'flow' rates vary from Rs. 2 per acre for autumn crops (excluding rice, indigo, and corton) to Rs. 62 for sugar-cane and rice, except on the recent extensions of the Lower Ganges Canal, where the highest rate is Rs. xa for sugar-cane. On the Betwa Canal the rates are halved for certain soils, and a preliminary watering for spring crops which are not irrigated again is allowed at R. 1 for 'flow.' The rates are lower on other canals. Owners' rates, amounting to one-third of the occupiers' rates, are levied on the proprietors of all land in villages into which irrigation has been introduced since the last revision of settlement, and are thus a kind of charge for the improvement effected at the cost of Government. The rate is one-sixth for the Agra Canal in Muttra and Agra Districts, but no rate is charged on the Betwa Canal. The area irrigated is measured by an amin (native surveyor) of the Canal department in company with the village patwari, and a statement of the demand is sent to the Collector. The rates are collected by the lahsildars in the same manner as land revenue. Arrangements are often made by which the lambardar of a village collects the rates due from the tenants in that village, and receives fees for prompt collection.

The receipts from all canals increased from an average of 60 lakhs in 1881-90 to 80 lakhs in 1891-1900, and in 1900-1 and 1903-4 amounted to nearly 100 lakhs. Working expenses rose during the same decennial periods from an average of 24 to 30 lakhs, and were nearly 35 lakhs in 1900-1 and also in 1903-4. The percentage of net profits on capital outlay, including simple interest, has increased from 0.98 to 2.04 and 3.48. The Eastern Jumna Canal earned as much as 22 per cent. in 1903-4. The Betwa Canal showed a loss of 3.2 per cent. in the same year-

The net profits from all canals in 1903-4 amounted to 63 lakhs, and, deducting interest on capital outlay, to 29 lakhs.

The only large artificial lakes used for irrigation are those in Tanks. Jhansi and Hamirpur Districts, which were constructed under native rule, as ornaments to temples on their banks, by damming up valleys. These lakes cover an area of about 6,000 acres, and have 71 miles of distributaries which irrigate about 2,400 acres. The irrigation channels from them are now maintained by the Canal department. 'The word 'tank' is usually applied in these Provinces to the very small basins excavated in level ground, which are referred to below.

Wells for irrigation are sometimes lined with brick, in which Indigenous case they are called pakkā, and sometimes unlined, when they methods are called kachchis. The former are made by digging a hole and building a cylinder in it, which is sunk by weighting the top and excavating earth from the centre. Kachchā wells are partly lined, where they pass through sand, with basket-work, twisted bands of grass, arhar stalks, jhan (tamarisk), and occasionally wooden planks. Water is raised from the deeper wells in leathern buckets with a capacity of 18 to 25 gallons. The bucket is attached to a rope, passing over a pulley, drawn by bullocks which walk down a slope when drawing up the bucket. In the Meerat and part of the Agra Divisions two pairs of bullocks are used with a single bucket, one pair passing down the slope as the other pair returns. The Persian wheel is used only in parts of Jhansi and Saharanpur. In places where the water is less than 12 or 14 feet below the surface, especially in the sub-Himalayan-Districts and the low land on river banks, a lever or dhenkli is used, consisting of a long pole supported on a pivot near one end. The pivot is fixed in two supporting pillars of mud or wood, and an earthen pot is attached by a rope to the longer end of the pole, while the short end is weighted with earth. In place of the dhenkli a pulley is sometimes used, over which passes a rope with an earthen vessel at each end. A pakkii well costs about Rs. 200 for a depth of 30 feet, if made for one bucket, and about Rs. 100 more for each extra bucket Kachcha wells may be made at rates varying according to the depth from Rs. 2 or Rs. 3 to Rs. 10 or Rs. 12. The area itrigated in a day by two men and a pair of bullocks varies from about & acre at a depth of 20 feet to a acre at 40 feet, and a acre can be irrigated by two men working a dhenkli at a depth of ten feet.

In the Benares and Gorakhpur Divisions, and in Eastern and Ough, the heavier rainfall and tenacity of the soil have led to streams.

the construction of small tanks of a few acres each, which are used for irrigation; where possible, the water in natural depressions and marshes called jhils is also used. In the sub-Himālayan Districts small streams are dammed, and watercourses led off from them, and considerable works of this kind have been made by European landholders in Basti and Gorakisour which irrigate about 55,000 acres. The usual method ofirrigation from tanks, jhils, and rivers, as well as from canals where the water is below the surface-level, is by the swing-This is a long shallow basket of plaited strips of bamboo (beri) or leather (banka), with two strings attached to each end held by two men, who dip it in the source and throw the water on a higher level. In the eastern Districts water is not always allowed to run direct on the land, but is scattered over it with a kind of wooden shovel. In rice land rain-water is carefully held up by small embankments in the fields.

Importance of different sources. Roughly speaking, in the Districts served by canals, half the area irrigated receives water from canals, and the greater part of the remainder from wells. In the Districts where there are no canals, wells serve from four-fifths to five-sixths of the irrigated area. In Basti, Gorakhpur, Azamgarh, Sūāpur, Bahraich, Bāra Banki, Fyzābād, Rāe Bareli, Sultānpur, and Partābgarh the area irrigated from tanks and jhils varies from three-fourths to more than as much again as the area irrigated from wells. The area irrigated directly from rivers, as distinct from regular canals, is not important except in the submontane tract.

Fisheries.

Fish are plentiful in all parts of the Provinces, as all the rivers and most of the numberless small tanks and lakes are well stocked. There is no control over river fishing, except in the case of a few streams and hill lakes which have been preserved. Landholders sometimes derive a certain amount of income from fishing rights in small tanks, and where this is considerable it is taken into account in assessing land revenue.

Rents.

There are three common forms of rent: distribution of threshed grain, generally called batat; appraisement of the standing crops, generally called kankit; and cash-rents. There are unimportant local combinations of cash- and grain-rents in exceptional areas, and certain valuable crops carry special rates (subti). Generally the rents are the result of custom and competition (according as population is sparse or dense) under the general influence of legislation.

Balai.

The arrangements for *hatai* are extremely complicated, owing to the varying shares of the village servants and others in the grain-heap. In the main division the landlord usually gets

one-third, two-fifths, or one-half; but privileges are given to high-caste tenants in many places, especially in Oudh, and to all tenants in backward tracts. Where population is sparse and tenants are in demand the share of the tenants is larger: as population fills up the share of the tenant decreases.

Kankūt is of two kinds. Under both the produce of the Kaukūt. standing crops is estimated, with a small deduction for village dues, and the landlord's share is calculated, and either paid in cash (at a valuation slightly above harvest prices) or delivered in grain. The former system is called darkatti.

Sometimes kaukūt is adopted for the autumn and balai for the Hybrid spring harvest. This avoids delay in dividing the principal systems, food-crop, and in the case of darkatti kankūt arrears can easily be realized in kind in the spring. Sometimes there is a fixed rate of so much grain in weight per bigha. Sometimes (as along the Nepal boundary) there is a system under which a low cash-rent is fixed, deductions being made for failure in the harvests.

Batai is an unprogressive and wasteful system. It involves Transition on the one hand delays, injurious to the produce and vexatious to cashto the tenantry, and on the other hand pilfering by the tenantry on large estates. Kankūt involves uncertainty of estimates as well as uncertainty of season, and is open to abuses. There is a well-known saving of Alangir: Batai lutai, kankut badast-ilangot-bandha. fama khūb ast. Batai spells robbery of the landlords: kankut puts power in the hands of low fellows; cash-reats alone are satisfactory.' This is true to-day. backward and precarious tracts, and where the tenantry are poor, grain-rents seem to be necessary; but as population fills up, cash-rents take their place. Whether or no money-rents date from the increase in imports of silver into India, it is a fact that now the main agent of conversion is the growth of The cultivation of produce-rented villages is population. inferior. The cultivators have little inducement to work their fields fully, as the landlord will reap a large nortion of the resulting produce. As long as the holding is large, the cultivator secures a fair sustenance on careless cultivation. When the holding is small, intensive cultivation becomes necessary. As the holdings decrease, eash-rents are imposed. They represent a reduction in the share of the produce, but they are profitable in the long run to the landlord. Landlords often reduce holdings before they convert to cash-rents, or even before enhancing existing eash-rents. On the whole, producerents are steadily giving way to cash-rents.

Cash-

Cash-rents depend on many historical circumstances; the state of prices and degree of prosperity of the tenant at the time of conversion, the character of the landlord, and so on. Over large areas the general level of the cash-rents undoubtedly follows the soil; but in individual villages the rates yield to many cross influences, of which the following are natural and important:—

- (a) Caste.—High-caste tenants are usually privileged. In Oudh and the eastern Districts the privilege may be as much as 4 annas in the rupee (one-fourth). In the western Districts it is less or even non-existent, particularly where Muhammadan invasion or settlement has strongly influenced tenures.
- (b) Circumstances of the landlord. The owners of large estates are more generous to their tenants than small proprietors, who indeed are almost compelled by their poverty to exact the uttermost farthing. The difference is particularly marked in Oudh, where the rents of talukdars are almost 20 per cent, lower than those of poorer proprietors.
- (c) The pressure of population.—The real determinant of rental incidence is, however, the pressure of the population as evidenced by the demand for land. When land is in demand rents steadily rise, and holdings as steadily decrease in size. Intensive cultivation seems to repay the tenants, who are by no means worse off where their holdings are small. Arthur Young's theory that a rising rental stimulates industry and so produces prosperity finds much support in the economic phenomena of these Provinces.

Influence of prices.

Prices of course affect rents where land is in demand, but only to a limited extent. The natural process of rent enhancement is not to misc rents all round, but to raise the rents of the inferior towards the rates of the superior lands. No feature of the rental economy of these Provinces is more marked than the resolute refusal of the people to admit that a rise in prices is a ground for enhancement of rent. In many tracts where rents are raised, the enhancement takes the form, not of a rise in the rate per bigha, but of a reduction in the size of the bigha. Prices have absolutely no effect on rent rates in backward tracts where population is thin; their only effect is to influence the area under cultivation. Where population is dense rents rise independently of prices; but in the long run prices have some influence. Elaborate inquiries between 1870 and 1880 showed the extremely loose connexion between prices and rents.

Legislative action has disturbed the natural development of rent chiefly by arresting enhancement of the rents of occupancy

ı

tenants. The rents of occupancy and non-occupancy tenants in rupees per acre compare as follows:—

	Division.						1'rovince.				
-	Mrerat	-Agra.	Rohilkhand.	Allahabid.	Jenares	Coraklipue.	Lucknow.	Pyabad	Agra	Oneffi.	United Pro- vinces.
Occupancy rents Non-occupancy tents	+·7 6.9	4·2 4·8	3·9 4·0	3·9 3·1	3·9 3·4	3·7 3·4	2.6 5.5	2·9 5·5	4·1 4·2	2.G 5.5	4·0 4·7

Although in theory occupancy tenants in the Province of Agra are not privileged as regards the rate of rent, the difficulties thrown in the way of enhancement by the law and the action of the courts have kept occupancy rentals low in the Meernt and Agra Divisions, particularly where canal irrigation is not used. Some allowance has, however, to be made for the fact that the same tenant sometimes holds under the same landlord in both occupancy and non-occupancy right, paying for the latter in a joint account an enhancement which ought to have been laid partly on the former. In Oudh occupancy tenants are a small privileged body of ex-proprietors. The Agra law puts no limit on enhancement except the market rate. The Oudh law protects every tenant (not being an occupancy tenant) from enhancement for seven years, and at the end of that period permits enhancement of only one anna in the rupee (6½ per cent.).

In the west of the Provinces each field often bears its own Field and rent; in the east and in almost the whole of Oudh the rents lump rents, are lump rents on the holdings. Where the natural soils vary greatly, the rents tend to follow the natural soils. Where the soils are fairly homogeneous, rents vary chiefly according to the distance of the fields from the village site. The fields near the village nearly always pay high rents; they receive more attention, getting better cultivation and manure than the outlying fields. In the Meerut Division, owing to careful cultivation the position of fields is of less importance than the quality of their soil.

The all-round average incidence of the rental of non-occu-kates of princy tenants given above represents the average rent for rent. average crops. Rents sometimes vary in the same villages from R. 1 in outlying poor soil to Rs. 100 per acre in rich garden cultivation near the site. Generally rents (in rupees) may be said to range as in the table on following page.

Within and beyond these limits there are, of course, infinite variations.

Special rents.

Tobacco, poppy, sugar-cane, and garden-crops pay special rates, which range from about Rs. 5 or even less per acre in the submontane Districts to Rs. 150 per acre near large towns, where night-soil and sweepings are available as manute.

		Division.

Cotton, hemp, &c., pay special rates, but these differ but little from those of ordinary land.

Wages.

The returns of wages are known to be so inaccurate that detailed figures are misleading. In the greater part of the Provinces agricultural labourers are paid wholly or partly in kind. The wages, when paid in kind, are either a certainamount of grain, or, at harvest-time, a certain proportion of produce from the field. Whether the wages are paid in cash or in kind, distinct variations can be traced in the amounts received in different parts of the Provinces, the rates being highest in the west and lowest in the south and east. In the western Doan the value of the daily wage ranges from 2 to 3 arms. It varies from 11 to 22 arms in the eastern Districts where population is congested, and in Bundelkhand where labour is inefficient. From very imperfect data there is some reason to think that these customary rates have an upward tendency, most marked near the large cities. The actual wage, however, constantly fluctuates, within the limits stated above, the determining factor at any particular season being the agricultural conditions then prevailing. Out of 2.6 million agricultural labourers in 1901, 400,000 were recorded as in permanent employ. These are usually fed and clothed by their employers and their wages scarcely vary. Village artisans are few in number; their services are remunerated by fixed payments which are more or less regulated by custom, and they receive certain amounts of grain or other food each harvest.

It is a matter of common knowledge that the wages of skilled labour have risen greatly as a consequence of the

extension of railways and industries. Some information as to the rates paid will be found on pages 83, 84. Domestic service is more highly remunerated than it was ten years ago, and wages are steadily rising.

The history of prices in these Provinces is similar to the Prices. history of prices throughout India. During the first half of the nineteenth century there were violent oscillations according to the seasons in particular localities. A good crop meant low prices, a bad crop meant famine prices. And at distances which are now considered small there were most extraordinary In those early days, also, there were great disvariations 1. crepancies between harvest prices and market prices. This state of things continued more or less until 1865. By that time communications had improved, and prices became There were still, however, marked variations in steadier. different places, and the difference between market and harvest prices also was considerable. A general rise in prices began in these Provinces, as elsewhere in India, about 1886 and 1887. The causes of that rise are still matter of discussion. A more remarkable feature has been the equalization of prices, which may be said to have commenced after the Mutiny, and to have been largely due to improved communications, especially railways.

Table V (p. 147) shows the variation in prices of staples in seers per rupee during the thirty years 1871-1900, the famine years of 1878, 1896, 1897, and 1899 being omitted. It will be seen that prices have risen steadily except in the case of salt, but the abnormal conditions of recent years vitiate any definition of the present tendency or prediction as to the probable course of prices generally. At the present time (1904) prices are easier than they have been for years. The highest prices known within the previous 30 years were in 1897, when the weight in seers of grain to be purchased for a rupee was: wheat 9 to 10, jouvir 11 to 13, gram 9 to 10, barley 11 to 13, and rice 8 to 9. The striking feature in a famine year is the approximation of the prices of the inferior grain staples to those of the better class.

The most prosperous parts of the Provinces are the Meerut Material and Kumaun Divisions. In the latter, there is no such condition of the individual as a landless day-labourer, while in the former the people. canal system ensures the cultivation of large areas, even in

An interesting account of prices will be found in Mr. T. Morison's article on 'The instability of prices before 1861' in the *Journal* of the Statistical Society, September 30, 1902.

a year of drought, and thus provides a constant demand for The standard of comfort is lowest in the eastern Districts, where the pressure on the soil is enormous, and in BUNDELKHAND, where the vicissitudes of the seasons cause excessive variations in the area cultivated. There is little difference in dress between the small cultivator and the labourer, except that the clothes worn by the latter have to last longer, and he has nothing warm in the cold season except a patchwork quilt of rags. The houses of both classes are of mud, but the cultivator will have several rooms round a small courtyard, while the labourer and his family live in a single room. No furniture is used by these classes beyond a bedstead and large jurs or receptacles made of mud which hold clothes or grain, and the libourer generally lacks even these. The cultivator has a number of brass, copper, and iron cooking vessels worth Rs. 5 to Rs. 10, no table utensils being required; but the labourer has to be content with one or two: In the matter of food the cultivator can afford vegetables and superior staples, while the labourer has to live on the grain he has received as wages, or the cheapest available. A Musalman will have fewer cooking atensils than a Hindu, but will also own a few plates and cups of rough glazed pottery. In the case of a clerk earning, say, Rs. 40 a month, the standard of living is distinctly higher. His house is usually of brick, and costs Rs. 2 to Rs. 4 a month instead of being rent-free. furniture includes two or three cane stools or chairs, occasionally a table, and some wooden boxes for clothes. The ground is covered with a small cheap carpet, and a few rugs are used for sitting on and as bedding; while the cooking utensils are worth Rs. 20 to Rs. 40. Small payments of Rs. 1 or Rs. 2 a month are made for the services of sweeper, water-carrier, barber, and washerman, instead of these being village servants. A clerk may spend from Rs. 12 to Rs. 30 in a year on his own clothes, which are of finer quality than those of the cultivator, and tend towards an imitation of the European style.

Torests 2.

The forests in the United Provinces may, broadly, be divided into the upper, middle, and sub-Himalayan, and those situated in the plains.

Upper Lliuälayan, The first lie mainly in the Jaunsar Bawar pargana of Dehra Dun District, in the tracts leased from the Tehri State, and in the protected forests in the higher hills of the Kumaun Division. The most important species are deadar (Cedrus Deadara), from 6,000 to 8,500 feet elevation; kail or blue pine (Pinus

<sup>\*</sup> From a note by Mr. J. W. Oliver, L.F.S.

excelsa), 6,000 to 8,500 feet; rai or spruce (Picca Morinda). 5.000 to 11,000 feet: morinda or silver fir (Abies Webbiana), 8,000 to 10,000 feet; yew (Taxus baccata), 6,000 to 10,000 feet; together with oaks, maples, and various other broadleaved species. The box-tree (Buxus sempervirens) also occurs in a few localities, though in no very great abundance.

The next class occupies the middle slopes and valleys in Middle Jaunsar-Bawar, the Tehri leased tracts, and the Kumaun Hima-layan. Division. The most important species are the chir or longleaved pine (Pinus longifolia), 2,000 to 6,500 feet, which is found unmixed over very large areas; oaks, of which the commonest is Ouercus incana; Pistacia integerrima, a very valuable furniture wood, but rare; and the hill fun (Cedrela

The third division extends in a continuous belt along the Sublower hills from the Jumna on the west to the Sarda river on Hima-layan, the cast, and thence into Bengal and Assam. These forests for the most part consist of sal (Shorea robusta), associated with a relatively small proportion of other trees, of which the most important are-Terminalia tomentosa and T. Chebula, Adina cordifolia, Anogeissus latifolia, Lagerstroemia parviflora, Acacia Catechu (khair), Dalbergia Sissoo (shisham), Cedrela Toona, Eugenia operculata and E. Jambolana, Schleichera trijuga, Ougeinia dalbergioides, Albissia procera, Mangifera indica (mango), and Stereospermum suaveolens. Sat of marketable value occurs in the outer hills up to an elevation of 3,000 feet, but usually ceases to be the predominating species above 2,000 feet. Bamboos (Dendrocalamus strictus) are also found on the lower hills, mixed with sal and other species named above, but attain their greatest development between the Ganges and the Kosi rivers. Bamboos also occur in the mixed forests of Bundelkhand.

The plains forests lie below the foot of the Himālayas, be-Plains tween the Jumma and the Gandak rivers, attaining their greatest width in Oudh. They comprise large tracts of pure sal in the better-drained portions, khair and slasham on the land adjacent to rivers, and intermixed with these areas containing sal, Adina cordifolia, Terminalia belerica, Bombas: malabaricum, Albizzia, Odina Wodier, Lagerstroemia parviflora, Zisyphus Jujuba and Z. xylopyrus, Mallatus philippinensis, Holarrhena antidysenterica, &c. The forests in Bundelkhand yield only small timber suitable for local requirements. Bassia latifolia (mahuā), Buchanania latifolia, and Diostyros tomentosa, which are valuable for their fruits and flowers, are common all over the country.

Administration.

For administrative purposes the forests are divided into three circles, each under the control of a Conservator. These, again, are subdivided into divisions, under Deputy, Assistant, Extra Deputy, and Extra Assistant Conservators; and the divisions into ranges under the charge of Rangers or Deputy Rangers, assisted by beat officers (foresters and forest guards). The Imperial Forest School at Dehra Dun has been established since 1880 for the education of the Provincial and Upper Subordinate services of India and Burma; students from Native States and private students are also allowed to attend. The forests of the School Circle, one of those mentioned above, have been specially set apart for the education of the students. In 1906 a scheme was sanctioned to provide a research institute in connexion with the school.

The forests in 1001 were classified as follows:-

	- ,		_	Central Circle.	Çiudh Circle.	School Circle.	Total.
Reserved forests			.!	5g. miles 1,888, 1	Sq. miles. 1,292	Sq. miles 715	S9- miles, 3,895
Protected forests	wanut	ed t	برد ۱۲:	•••	***	153	153
the Forest depa Protected forests	manar	ed b	Iy	30		744	70
District officers Unclassed forests				ე.გნ <u>ვ</u> კი	 34	:3	9.363 77
		Tota	11	11,311	1,326	881	13,518

Reserved

The leased forests comprise 141 square miles of deodar and and leased chir forests leased for a term of twenty years from the Tehri State on payment of a rent equal to 80 per cent, of the net revenue; and re square miles held on perpetual leases at a fixed annual rent from the Thakurs of Rawain and Dhadi, who are feudatories of the Jubbal State in the Punjab.

Workingplaus.

The 'reserved' and leased forests are, with the exception of those in Bundelkhand and a few outlying areas, all managed in accordance with sanctioned working-plans under various systems of high forest management, except where there is a large demand for small timber and poles, in which case the systems of coppice and coppine with standards have been adopted. The small areas not under working-plans are worked under annual plans of operations. In nearly all forests the quantity of timber

In 1905 the Director of the Forest School, Dehra Dün, ceased to exercise administrative powers, and the three circles were redistributed into two, called respectively the Eastern and Western.

people by the District officers under rules sanctioned by Government. The revenue derived from the sale of produce to public departments and traders, and from grazing dues, is credited to the Forest department, the expenditure being debited to the same head. The annual revenue averages about Rs. 33,000, and the expenditure Rs. 17,000.

Fuel and fodder reserves.

There are no areas specially set apart as fuel and fodder reserves, the wants of the people being met generally from areas left open under the forest settlements for the exercise of such rights. In other cases provision for the necessary supply is made in the working-plans. Under the orders of Government the forests may be thrown open to the people in times of scarcity and drought, for the free extraction of edible produce, and to free grazing or grazing at reduced rates for those who enjoy no rights under the forest settlements, the open areas being utilized to their full extent, and the closed portions also thrown open, if necessary, in seasons or localities of exceptional distress. Statements showing the pasturage available in the forests are drawn up annually in accordance with the famine code and submitted to the Director of Land Records and Agriculture, who maintains registers of cattle and pasturage.

Fire protection. In 1904, out of a total area of 4,078 square miles of 're-served,' leased, and 'protected' forests under the management of the Forest department, 3,211 square miles, or nearly 80 per cent., were under protection from fire, and the failures amounted to only 146 square miles, or less than 5 per cent. of the area under protection. The expenditure incurred was Rs. 62,000, or Rs. 19 per square mile protected.

Survey.

The whole of the forests has been demarcated and mapped, with the exception of some inconsiderable areas recently acquired, which are now under survey.

Special plantationsThe only plantations of a special nature are the Rānīkhet and Chakrātā orchards and nurseries. These have been maintained for many years with the object of promoting fruit-growing, which is now an assured success. Two small plantations of imported chestnut-trees were also established in 1900, in the Nainī Tāl and Jaunsār divisions.

Receipts and expenditure.

The gross Forest receipts tose from an average of  $13\frac{1}{2}$  lakhs in 1881-90 to more than 15 lakhs in 1891-1900. They amounted to  $15\frac{1}{3}$  lakhs in 1901 and exceeded  $22\frac{1}{3}$  lakhs in 1903-4. The expenditure in the same periods has varied little, being about 9 or 10 lakhs yearly.

Mines and minerals Coal.

Peat has been found in the Upper Doah, and coal is known to exist in Southern Mirzapur. In 1896 a mine was opened in

what has been variously called the Kota or Singrauli-Jwālāmukhi coal-field, but the works were closed after 1,000 tons had been extracted, as the operations did not pay.

Iron and copper are found in the Himālayan Districts, and Metals. the mines were formerly of importance; but the increased difficulty of working copper, as veins became exhausted, has led to the closing of most of the mines, and the ironworks are very small and supply only the immediate neighbourhood. In 1903-4 leases for mines worked after the native fashion were issued for eight iron mines and one copper mine; but the royalties collected amounted to only Rs. 116. Iron was once worked by a company at the foot of the hills near Nainī Tāl, but the operations were not a commercial success. A prospecting licence for a large area in Dehra Dūn has recently heen granted, and an English company has obtained a mining lease for copper in Kumaun. Gold is obtained in minute quantities by washing in some of the rivers in, or near the foot of, the hills.

Limestone is found in the Himālayas, but is only used locally Limefor making lime owing to the difficulty of transport. In most stone, parts of the plains kankar, which is a form of calcium carbonate, is found in beds a few feet below the surface and is used for metalling roads and making lime. Usually the kankar is in small nodules, but sometimes it occurs in a more solid form and can be cut in blocks for building.

Stone is largely quarried in Mirzāpur District in what is called Stone. the Stone Muhal, which extends over 160 villages with 9,529 quarries, of which 1,382 are working. The stone is a fine sandstone, largely used for dock-building, for municipal drains and private houses, while stone ballast is displacing kankar or nodular limestone on railways. Curry-stones, hand-mills, potters' wheels, stone vessels, and other articles are also made in the District and exported, The Stone Mahail is Government property, but is worked by private individuals, who pay duty at rates varying from 4 annas per 100 cubic feet for ballast to I anna per cubic foot for cut stone. In 1903-4 the gross income from duty was Rs. 88,000 and the expenditure on staff and roads Rs. 46,000. Small quantities of granite have been obtained from Banda, Mirzapur, and Almora, of slate from Garhwal and Naini Tal, and of soapstone from Jhansi and Hamirpur. Stone is also worked in Agra and Muttra Districts and in Bundelkhand, while it is used more commonly than brick in the Himālayan Districts.

There are no mines for salt in the United Provinces, but salt saltperre,

is sometimes manufactured on a small scale during the process of refining saltpetre, which is prepared from nitrous earth by liniviation. The purified salt is chiefly consumed in the area east of Allahābād, and in parts of Oudh it is employed to adulterate imported salt. In Aligarh, Agra, Etāwah, and Mainpuri the impure salt or sittu is used for curing dried meat for export to Burma. Salt is also used in the manufacture of soap, and for curing hides and skins. Carbonate and sulphate of soda are prepared, by indigenous methods, from the saline efflorescences called reh, which are found in barren land in many parts.

Arts and manufactures. Hand industries. Cotton.

Cotton is ginned and spun with rude appliances as a home industry all over the Provinces. Weaving is carried on in most Districts on hand-looms of simple construction. In 1901 the number of persons supported by industries in connexion with cotton was over 12 millions, of whom nearly 1 million were dependent on weaving, 140,000 on spinning, and 136,000 on cleaning, pressing, and ginning. The largest industry is in Azamearh District, where there are about 13,000 looms; but there are also important centres in Fyrabad, Aligarh, Etah, Muzaffarnagar, and Sahāranpur. The commonest production is a plain uncoloured material used for clothing, and often woven of the exact size required for a join-cloth (dhoti) or sheet. Coloured fabrics, including checks and stripes, are also produced, and machine-spun yarn is preferred for these. Muslin is made in small quantities in Lucknow, Benares, Bulandshahr, Fyzābād, Jaunpur, Mitzāpur, and Rāe Barclī. The principal weaving castes are the Korls (Hindus), who numbered nearly a million in 1901, and the Julabas (Musalmans), who were 900,000 strong. Both hand-spinning and hand-wearing have suffered from the competition of the mills, especially the former, but the rate of decline is said to have lessened during the last Machine-woven cloth is better in appearance twenty years. than the material produced by hand, but the very defects of roughness and unevenness in the latter make it preferred for quilts and the like, and it is more durable.

Silk.

Experiments in the production of mulberry silk have been carried on for many years without much success. In Mirzapur District wild cocoons of the *tasar* moth are collected, and worms bred from them by the jungle tribes. Since the famine of 1896 the out-turn has been only about 2 million cocoons, or half of the former production.

Benares is the chief centre of the silk-weaving industry, and in 1899 the capital invested in that District was estimated at 30

lakhs. Some work is also turned out at Agra and Farrukhābād, and in Azamgarh and Ihānsi Districts. At Benares the chief fabrics made are kincob (kamkhwāh) or brocade, which is adorned with gold and silver threads, and many varieties of piece-goods and articles of clothing. In Azamgarh mixtures of silk and cotton are more common, and good satin is also produced. Silk braid is made in many places. In 1901 there were 13,500 persons employed in silk manufacture, &c., of whom 12,300 were in Benares.

Embroidery in silk or cotton on muslin is called chikan, and Em-Lucknow city is famous for this industry, which is carried on by broidery. the more respectable classes of poor people, especially Muhammadans. Handkerchiefs and other articles for personal use or wear are the chief productions, and the industry is probably increasing. Embroidery in gold and silver on velvet, silk, crape, sarcenet, &c., was formerly prepared for the native demand at Agra, Benares, and Lucknow, the out-turn being chiefly saddlecloths, covers for cushions, elephant-housings, caps, coats, and other articles of clothing. Slippers, table-covers, &c., are now produced for the European market.

In every District there is a small local trade in blankets. Wool. These vary in quality, the best being produced in Bahraich and Muzaffarnagar, but all are of coarse brown stuff, very different from the European style. In the hills many kinds of woollen cloth are produced in small quantities, almost entirely for local use. Goats' hair is made into ropes and sacking, and in the Himālayas and Mirzāpur into coarse cloth. In 1901 there were 50,000 persons supported by wool industries, but many of the persons recorded as sheep- and goat-breeders and shepherds (120,000) are also employed in blanket-making.

Cotton carpets or daris are woven on a large framework, the Carpets warp being arranged horizontally. Stripes form the usual design, and rugs. but other patterns are also made. The industry is carried on in every jail, and Alfgarh, Bareilly, and Agra Districts are especially noted for it.

The principal centre for the manufacture of woollen carpets is Mirzāpur, where a considerable number of factories are at work, including some under European supervision. also a large factory at Agra; and while the industry is carried on in many jails, the carpets produced at the Agra Central jail (annual production about 15,000 square yards) have the best reputation. Smaller quantities are made in Moradabad, Cawnpore, Bulandshahr, and Jhansi Districts. In the case of woollen carpets the warp of cotton varn is arranged vertically, and the

carpet is made by placing ties of woollen yarn round every pair of threads, instead of weaving. Smaller rugs are also made both of cotton and wool; and felted articles of unspun wool, such as rugs, prayer-mats, horse-cloths, saddles, &c., are produced in many Districts, those made in Bahmich being the best.

Dycing.

The art of dyeing is practised in all parts of the Provinces, and is applied to cotton, wool, silk, and leather. Till within the last twenty years the dyes used were chiefly of vegetable ongin; but the use of aniline and alizarine has increased enormously, and is fast driving out the older art. The cost of dyeing has thus been cheapened, and coloured materials are more used, though the dyes are fleeting. There is a considerable industry in cotton-printing. Three classes of cloth are used: English long-cloth for curtains, tablecloths, &c.; coarse country cloth for quilts and rough chintz; and a still stronger cloth for use in place of carpets. The preparation of the cloth by washing and bleaching takes several days, and patterns are then produced by stamping with a wooden die held in the hand. The art is most flourishing in the towns of Farrukhābād, Lucknow, Jahāngirābād (Bulandshahr), and Jāfarganj (Patehpur).

Jewellery.

Personal ornaments for females are produced in great variety by the ordinary sonars or goldsmiths. They include necklaces, rings for the finger and the nose, bangles, earrings, anklets; tiams, Ac., in gold or silver, sometimes ornamented with precious stones. The poorer classes wear rings, bangles, carrings, and anklets of brass or pewter. At Lucknow ornamental boxes, bowls, flower-vases, &c., are made of silver, adomed with ripousse work, but these are chiefly for the European market. Quaint figures of animals are made in Muttra District, of silver cast in a mould. Enamelling on silver and gold, and bidri work, or inlaying silver in an alloy from which kukka pots, &c., are made, were formerly practised at Lucknow; but these industries have almost died out. Over 250,000 persons were returned in 1901 as supported by work in connexion with gold, silver, and precious stones, while the SonIr caste numbered 284,000.

Tien.

The blacksmith is usually a village servant, who makes and require the simple agricultural implements in common use, and is partly paid in kind. Benares, Mirzīput, Cawnpore, and Farrikhāhād are important centres for the manufacture of iron waterpots and iron dishes for domestic use. Rough caulery is also made at Hāthras and Cawnpore. In 1901.

300,000 persons were returned as supported by the iron industry.

Household vessels are almost exclusively of metal. Hindus Brass and use brass or some other alloy, while Musalmans use copper copper. vessels, which are periodically tinned. The chief centres of manufacture are Mirzāpur for ordinary Hindu articles, and Farrukhābād and Lucknow for Muhammadan utensils. More ornamental work is produced in Benares, such as idols, sacrificial implements, shields, bells, embossed panels and trays, besides goods for the European market. There are less important centres for similar work in the Districts of Hamīrour (idols), Muttra (idols), Jhānsi (toys and brass vessels ornamented with copper), and Etāwah (sacrificial accessories and musical instruments). The ornamentation is partly beaten out with punches and partly engraved. In Moradabad engraved brass-work is ornamented with black, red, or blue lacquer. There is a striking tendency towards the concentration of the manufacture of ordinary articles in the larger centres. The main industries connected with brass and copper supported nearly 60,000 persons in 1901.

The chief class of pottery produced is a rude red ware Pottery. for domestic purposes. Only the lower eastes of Hindus use earthen vessels as cooking-pots, table vessels, or pipe-bowls, but Muhammadans use them freely. Large pots are, however, used by all classes of agriculturists for storing water, grain, and dry goods, for cattle troughs, and for raising water for irrigation. Small articles are made on a heavy wheel revolving horizontally, but the larger vessels are moulded. Ornamental pottery is produced at Chunar in Mirzapur District, and in Alfgarh, Azamgarh, Lucknow, Bulandshahr, Morādābād, Sttapur, and Meerut Districts, and in the Rampur State. The Bulandshahr, Meerut, and Rampur pottery resembles that made at Multan in the Punjab, and is the most artistic. At Lucknow clay models of human beings, fruit, and vegetables are made, which have considerable merit. The potter caste, called Kumhār, numbered more than 700,000 Hindus and 20,000 Musalmans in 1001, while 370,000 persons were returned as supported by nottery-making. In villages the potter is a servant of the community, who receives regular dues and presents, and supplies certain articles free.

Crude native glass is made at many places in the Doāb, Glass. the chief centres being in Alīgarh, Mainpurī, and Etāwah Districts. It is manufactured from an efflorescence on the soil of impure carbonate of soda, and the principal articles made

are glass bangles. Country-made glass is blown into small phials and flasks in many places.

Stone-

There is a considerable trade at Agra in articles carved from marble inlaid with other stone, and from soapstone. In Muttra District sandstone is carved; and many private houses and temples exhibit exquisitely carved screens in reticulated tracery, while pillars and beams are also adorned with patterns in relief.

Woodcarring. Wood-carving was formerly of importance, and carved doorposts, lintels, doors, and balconies still adorn private houses
in many Districts. At present the chief work done consists of
articles for sale to Europeans, such as overmantels, screens,
and photograph frames. Execution is largely sacrificed to
speed of production, and the fret-saw and punch are bad
substitutes for the highly-trained eye and hand. Sahāranpur
is the chief centre of the trade; but excellent ebony-carving
is produced at Nagîna in Bijnor District, and at Mainpuri
carved wood is inlaid with brass wire.

Ivory,

Ivory-carving is very rare; but the workmen who produce small articles of bone, such as combs, toys, and the like, occasionally work in ivory. Both ivory and bone are used for inlaying in wood.

Sugar.

The manufacture of sugar is of great importance, especially in the Barcilly, Gorakhpur, and Benares Divisions. The cane is pressed in small mills, with two or three rollers, turned by oxen. The juice is then roughly filtered and hoiled, and the raw sugar is known as gur or rāb according as it is solid or liquid. Rāb is refined by filtering through grass mats and removing the colour by means of a weed called stavār (Hydrilla' rerficillata). Other methods of filtering are through woollen's blankets or mats of rice straw. Crystallized and loaf sugar are also made by dissolving gur in water.

Mill miastries, Cetton, The most important factory industry is that of spinning and weaving. The first mill was opened by private enterprise at Campure in 1869, and three others are working in the same city. In 1905 there were five other mills, three at Agra and one each at Mirzāpur and Hāthras. The total capital invested is about 111 lakhs, and the out-turn in 1903-4 amounted to 28 million pounds of yarn and 4 million pounds of woren good. The principal statistics are shown on the following page.

The number of factories for ginning, cleaning, and pressing central fluctuates, but has increased considerably from eight in 1881 to sixteen in 1891, sixty-five in 1901, and 101 in 1903.

while the number of persons employed was nearly 5,000 in 1901 and 8,500 in 1903. These presses are mostly situated in the Meerut and Agra Divisions, and are largely owned and managed by natives.

	1880-т.	1890-1.	1900-1,	1903-4.
Number of mills ,	2	5	6	9
Number of looms	278	2,141	1,645	3,215
Number of spindles	38,328	135,842	247,230	309,620
Average daily number of hands				•
employed	1,194	5,005	7,017	8,940

The single woollen mill at Campore is the largest in India. Wool. The out-turn consists of blankets, all kinds of woollen cloths and fabrics, knitting yarn, Berlin wool, &c., valued at over 153 lakhs in 1903. The progress made is shown below:-

	1886.	1891.	1901.	tgaz.
Number of mills	I	r	1	ī
Number of looms	229	271	302	302
Number of spindles	5,160	7,690	13,066	13,066
Average daily number of hands				
employed	808	1,400	1,500	1,500

Tanneries have long been established in Cawnpore, where Leather. there are now four large concerns employing more than 7,000 persons daily. All kinds of leather goods, including boots and shoes, saddlery, military and police accourrements, are produced and exported to many parts of the world as well as sold in India.

There are six breweries, five of which are situated in the Breweries. hills and one at Lucknow, the total out-turn in 1903 being 1-1 million gallons of beer.

Other important mill industries are a paper mill at Lucknow, Other two large sugar-refineries at Shāhjahānpur and Cawnpore, at industries. the former of which rum has long been made, nine iron foundries, and a jute mill. Smaller undertakings are the lac factories in Mirzāpur, forty-five of which employ about 4,700 persons daily, and soap works, ice factories, flour mills, oil presses, printing presses, bone mills, dairies, and brick and tile works. The manufacture of indigo is declining, but in 1903 there were 402 factories with 27,300 persons employed.

Unskilled labour is paid at rates which vary according to Wages. the demand for other work, especially agricultural. Women are occasionally paid as little as 13 annas a day, but 2 annas is more usual. Male coolies receive from 2 annas to 4 annas,

but the rate usually varies between 21 and 3 annue. -Masons and carpenters are paid at rates varying from Rs. 8 to Rs. 15 per month, and blacksmiths from Rs. 12 to Rs. 20. Fitters receive from Rs. 15 to Rs. 25 according to their ability, enginedrivers Rs. 8 to Rs. 15, and spinners in cotton mills Rs. 10 to Rs. 15.

Condition of opera tives.

Except in Campore, the number of factories or mills in any single place is not sufficient to affect internal migration appreciably, and unskilled workmen can be obtained without difficulty. Skilled labour in such places has often to be imported from Bombay or Karāchi. In Campore, however, labour is often difficult to get, and the number of immigrants is large; but they come chiefly from neighbouring Districts, and very few from a considerable distance. Wages are high, while the cost of living is not appreciably more than elsewhere, so that the operatives are able to support themselves without continuous labour. No recruiting agency has yet been formed; but in 1905 an exhaustive inquiry was made by an official into the causes which affect the supply, and an attempt has been made by a combination among the masters to regulate wages and prevent competition for labour. Since plague spread in Cawnpore the labour difficulties have increased, and two mills have erected model dwellings for their workmen.

Trade and before Alincaa tion.

The trade of these Provinces prior to annexation falls into commerce: two classes, the trade of the East India Company, and that of the people generally. The former was almost entirely confined to the purchase of cloth at the two centres of Tanda in Fyzabad and Allahabad, the value in 1786 being less than 3-lakhs, and a little opium. The latter was most important in the eastern half of the Provinces, for Rohilkhand produced chiefly rice and other grain which was exported to Delhi and the neighbouring Districts, while the upper portion of the Donb had suffered so much during the decay of the Mughal empire that it had no manufactures and agriculture was languishing, the only exception being a small out-turn of indigo near Etawah. Mirzapur was the great centre of trade, owing to its position on the Ganges. Here came merchants from the Deecan and Bundelkhand, with raw cotton and indigo, shawl merchants from the west and traders from Nep'll, taking away piece-goods, raw silk, and spices from Bengal, and tin and copper imported from The through trade in 1786 was estimated at about 50 Cotton goods from the eastern half of the Provincewere the chief export of local production. Before the collapse of the Mughal power, the finer products of the looms were sent to Delhi, but trade with Europe sprang up after the battle of Buxar in 1764.

The chief exports now are wheat, oilseeds, raw cotton, sugar, General molasses, opium, hides, and ghī; the chief imports are English character and Indian cotton goods models become all more forms. and Indian cotton goods, metals, kerosene oil, manufactured ing trade. wares, salt, spices, and for some years past foreign refined sugar. Agricultural produce amounts to about 60 per cent, of the exports and 12 per cent. of the imports in normal years, but bad seasons completely alter the balance of trade. In the Meerut Division alone, where there is a magnificent system of irrigation, the exports are fairly steady. The bulk of trade is carried by rail, and for this accurate figures exist. The total value of imports by rail rose from 11-9 crores in 1880-1 to 13-3 crores in 1890-1, 19.6 crores in 1900-1, and was 18.3 crores in 1903-4, while the total value of exports was a crore, 15 crores, 28 crores, and 24 crores in the same years. Accurate figures of the river-borne traffic are not available, but its total value is estimated at nearly 4 crores. More than half is carried in about equal proportions by the Gogra and the Ganges. Next in order come the Rapti river, the Ganges Canal, the Jumna, Agricultural produce is by far the most imand the Gumti. portant item of this trade, which also includes large exports of wood and stone. Since 1898 the river-borne traffic between the United Provinces and Bengal, carried along or across the Ganges, the Gogra, and the Gandak, has been systematically registered, and its value in 1903-4 was: imports, 108 lakhs; exports, 122 lakhs. No complete statistics are available for the traffic on roads. From 1897 to 1899 the road traffic with the Punjab was registered at seven posts, and from 1900 to 1902 the traffic with the Rajputana States was registered at ten posts. The system has since been applied to traffic with the Central India States. It is estimated that the total value of trade by road with other parts of India is; imports, 272 lakhs; exports, 124 lakhs. The foreign trade with Nepal and Tibet, which will be described below, is registered; in 1903-4 imports were valued at nearly 123 lakhs and exports at 48 lakhs.

The chief centres of trade are Cawnpore, Allahabad, Mirza-Chief pur, Benares, Lucknow, Mcerut, Aligarh (Koil), Hathras, centres. Muttra, Agra, Farrukhābād, Morūdābād, Chandausī, Bareilly, Sahāranpur, Muzaffarnagar, Ghāziābād, Khurja, Kāsganj, Bijnor, Gorakhpur, Ghāzīpur, Pīlībhīt, and Shāhjahānpur. Of these, Cawnpore, Agra, and Hathras are the most important; but traffic is registered separately only for the first. The trade of Camppore is chiefly in raw cotton, cotton goods, grain, oilseeds,

and hides and skins, and amounts to about one-fourth of the total traffic of the Provinces. Mirzāpur, Benares, Lucknow, and Farrukhābād are great centres of the brass and copper industries; but in the other towns the trade in agricultural produce is the most important.

Chamber of Commerce. The Upper India Chamber of Commerce was founded in 1889 and now has forty-five members, who include almost every European commercial firm and manufacturing concern of consequence in these Provinces and in the Punjab. Its head-quarters are at Cawnpore. Trade carried on by natives of India has no similar organization.

Internal trade.

The mechanism of internal trade is simple. Except in the large towns there is no banking system, and rupces are more popular for actual payments than currency notes. towns away from the railway, remittances by notes sometimes. raise the price of these above their face value. The greater part of the Provincial trade is rural, and is carried on by methods of long standing. In the rural tracts markets are held at convenient local centres, a few miles apart, once or twice or even three times a week. The surplus produce is disposed of in one of three ways. It is handed over to the village graindealer, or sold to itinerant buyers, or disposed of in markets. The grain-dealers and buyers may either be agents for larger firms or sellers to them, and thus numerous small lots of produce are brought together within reach of the railways, and consigned elsewhere by the exporting firms, who are either local traders or agents of firms at the scaports. Similarly imports of goods are brought in by the large houses and distributed by them to the retail shopkeepers who have shops in the towns and attend the country markets, or to itinerant vendors. Trade is thus highly organized, though the methods are not those of European countries. Hardly a singular vernacular paper provides commercial intelligence for its readers. In towns small retail businesses uppear to be increasing, and it may be said that retail dealers supply a more diversified class of goods than formerly. The whole tendency is towards the breakdown of the old rule-one article, one dealer. The principal trading castes are the Banias or Vaisyas, but these now have no monopoly. Certain trades connected with the supply of food, such as confectionery, can be carried on only by castes who are considered pure; but even here there is a tendency to wink at the intrusion of other castes. A hundred years ago Baniaras were the grain-carriers, but they have now settled down to agriculture.

The total value in 1903-4 of the external rail-borne trade External with the most important Provinces and States is shown below, trade, in lakhs of rupees:—

	Port of Calcuita.	Port of Bombay.	Rajputana and Central India.	Punjab,	Bengal, excluding Calcutta.	Bombay Presidency, excluding port.
Imports .	6,28	2,79	2,16	2,69	3,50	1,15
Exports .	30,66	3,50	2,13	3,41	3,38	49
Total	16,94	6,29	4,29	6,10	6,88	1,64

Twenty years ago the trade with Calcutta was nearly half of the total; but it has now fallen to little more than one-third, owing to the improvement of railway communications with Bombay.

The imports may be divided into raw materials (including Imports. machinery and coal) and goods ready for consumption. Of the first class, nearly all the coal comes from Bengal, while railway plant and machinery are chiefly imported from Calcutta, Bombay, the Punjab, and Bengal supplying most of the remainder. The most valuable raw materials imported are metals. which are chiefly obtained from Bombay port, Calcutta, and the Bombay Presidency. Most of the gunny-bags imported, which are used for exporting grain, come from Calcutta and Bengal, and Bengal also supplies lac. Hides and skins are chiefly obtained from Raiputana and Central India or the Punjab. In the case of articles ready for consumption, piece-goods take the first place, usually amounting to one-quarter of the total imports. These come chiefly from Calcutta, Bombay port, and Bombay Presidency. Salt is imported from Raiputana, the Bombay Presidency, and the Punjab. A large proportion of the total grain imported is usually rice from Bengal and Calcutta, but in 1903-4 there were considerable imports of gram from the Punjab. A temporary feature of the sugar trade is the extent to which sugar from Mauritius has replaced beet sugar from the continent of Europe since the imposition of countervailing duties. The imports are more than balanced by very large exports of country-made sugar.

The most valuable of the raw materials exported are oil-Exports. seeds, which are sent to Calcutta, Bombay, and the Punjab. Raw cotton goes chiefly to Bombay and Calcutta for shipment to foreign countries, and hides and skins are mainly disposed of in the same way. Grain and pulse take the first place in the exports of articles ready for consumption; but the figures

fluctuate enormously. In the prosperous year 1892, the exports were valued at 9552 laklis, while in the famine year 1807 they fell to 543 lakhs. The value in 1903-4 was 520 lakhs, the most important heads being wheat, gram, and pulse and millets. In prosperous years the wheat is chiefly sent to Calcutta or Bombay for export. Opium also forms a valuable article of export, most of it being sent from Ghazipur to Calcutta or to the factory at Patna. Next in importance comes sugar, which is supplied to Rājputāna and Central India, the Punjab, Bombay Presidency, Bengal, and the Central Provinces. The most important item under the head of provisions is ghi (clarified butter), which is sent to Calcutta, Bombay Presidency and port, Răiputana and Central India. The chief manufactured goods exported are cotton and woollen. The largest markets for cotton goods are Bengal, Rajputana, and the Trade in indigo has decreased rapidly since 1898, owing to the competition of the artificial dve. Previous to that year the exports varied from 70 lakhs to over a crore, but they have now sunk to a6 lakhs in 1900-1, 211 in 1901-2, and 13 in 1903-4. More than half of the total goes to Calcutta and a considerable portion of the remainder to the Punjah.

Trade outside Indio. Foreign trade passes direct from these Provinces only to Tibet and Nepāl. It is conducted on primitive lines. Sheep and goats are the means of transport to Tibet, and ponies or pack-bullocks to Nepāl, while barter is largely the method of exchange. The registration is fairly accurate, as transport is difficult outside the roads on which the posts are placed. The value of the imports from Nepāl has risen from 57 lakhs in 1880—1 to 59 lakhs in 1890—1 and 81 lakhs in 1900—1. The principal items and their value in 1900—1 were: grain 35 lakhs, chiefly rice, ghī 11 lakhs, oilseeds 7 lakhs, timber 3 lakhs, gums and resins 1 lakh, and spices 7 lakhs. The exports have risen from 32 lakhs in 1880—1 to 34 lakhs. The exports have risen from 32 lakhs in 1880—1 to 34 lakhs. In 1903—1 and 43 lakhs in 1900—1; including cotton goods 27 lakhs, salt 4 lakhs, sugar 3 lakhs, and metals 2 lakhs. In 1903—4 the imports were valued at 115 lakhs, and the exports at 45 lakhs.

Trade with Tibet is on a smaller scale. The total value of the imports in 1900-1 (chiefly borax, salt, and wool) was under 7 lakhs, and of the exports (grain, sugar, cotton goods, and pediars' wares) 3½ lakhs. In 1903-4 the imports and exports were 7.5 and 5.3 lakhs respectively.

Means of commumeation, Railways,

The total length of railways in the Provinces increased from 2,571 miles in 1891 to 3,423 in 1901 and 3,636 in 1904. Metre-gauge lines increased from 814 to 1,410 miles, and

broad-gauge lines from 1,757 to 2,226 miles. There is now General 1 mile of railway to every 31 square miles of area. A railway system. runs through some part of every District except Almora and the Tehri State. The main features of the system are due to the requirements of trade, but they have been occasionally modified by military considerations and the necessities of famine protection.

It has already been stated that the bulk of the trade of the Connexion Provinces is with Bengal and Calcutta, and the most important with Bengal, lines are those which carry this. The two trunk lines passing through the length of the Provinces parallel to the great rivers are the East Indian and the Oudh and Robilkhand, both state railways on the broad gauge, the former being worked by a company and the latter directly by Government. The East Indian Railway, which was commenced before the Mutiny as a military line and trade route, lies entirely south of the Ganges, crossing the Jumna at Allahābād, where it enters the Doāb. It serves Ghāzīpur, Benares, Mirzāpur, Fatehpur, Cawnpore, Etāwah, Muttra, Agra, Alīgarb, Bulandshahr, and Meerut Districts, and meets the North-Western Railway at Ghāziābād. Three short branches run from Dildarnagar to the bank of the Ganges opposite Ghāzīpur, from Tündla to Agra, and from Hathras junction to Hathras city, while the Tubbulpore branch from Allahabad forms the main route from the south-east of the Provinces to Central India and Bombay. The length has increased from 579 miles in 1891 to 597 miles in 1904, including 58 miles of double track. The Oudh and Rohilkhand Railway starts from Mughal Sarai on the East Indian Railway, and its main line traverses the Districts of Benares, Mirzāpur, Jaunpur, Partābgarh, Rāe Bareli, Lucknow, Hardoï, Shāhjahānpur, Bareilly, Morādābād, Bijnor, Sahāranpur, and the Rampur State. A loop-line, formerly the main line from Benares to Lucknow, also serves Jaunpur, Fyzābād, and Bāra Banki. Important cross connexions from Lucknow to Cawnpore, from Bareilly and Moradabad to Aligarh, and from Moradabad to Ghaziabad, link it with the East Indian Its broad-gauge length has risen from 693 Railway. miles in 1891 to 1,187 miles in 1904, while 81 miles of narrow gauge have been constructed, forming an important link between the eastern and western systems of India. A third means of communication with Bengal is the Bengal and North-Western Railway, an assisted line of metre gauge. This line was till recently situated entirely north of the Gogra, serving the Districts of Gorakhpur, Bastī, Gondā, and Bahraich.

while branches ran up to the Nepal border. Its importance has been immensely increased by the link mentioned above, which connects it through Bira Bankl and Lucknow with the Rajputing-Malwa Railway at Campore, and within the last few years extensions have been made south of the Gogra in Ballia, Glüziput, Azangath, and Benates Districts. The length has risen from 301 miles in 1891 to 761 miles in 1904

Comercio niță la miar.

Besides the Jubbulpore branch of the East Indian Railway there we the lines to Bombay. The Indian Midland section of the Great Indian Peninsula broad-gauge line from Itani divides at Ihinsi, one branch passing through the Gwalier State to Agra and Delhi, where it joins the East Indian, while the other transses Islam District, meets the East Indian at Campare, and passes over the Oudh and Robitkhand line to Including a branch constructed as a famine-relief ling from Jhansi to Manikpur on the Jubbulpure branch, which creases Handrour and Blanda Districts, this railway, which is a state line (incomprated since 1900 with the Great Indian Puniocula), had a length of 328 miles in 1801 and 330 miles in 1924. The other line is the metre-rance Campure-Achlmera branch of the Rajputana-Malma Railway, which meets the castern system at Camppore and traverses Farrukhühüd, Etah. Aligarli, Muttra, and Agra Districts. It is a state railway, with a length of 261 miles in 1891 and 282 miles in 1904.

Contraction with the Projects

The western frontierrof the Provinces is crossed by the East Indian Eadway opposite Delhi. The North-Western State Railney mest, the Oudh and Robilthand at Saharanpur, and also rerves the rich Districts of Muzaffarnagar and Meetut, juning the East Indian line at Oktabald. The total length has 107 miles, all on the broad gauge, in both 1891 and 1922.

Title is

West of the Copta, the submontane Districts of Sithpur, Kherk and Pilibhit are traversed by the Lucknow-Bareilly State Reilway on the metrogauge, with a length of 198 miles in 1891 and 231 miles in 1994. The Rohilkhand-Kumaun assisted railway on the same pungs, with 54 miles built before 1891, 1995, then them Hareilly to Kathgordan at the foot of the bills near Nami Tal. A branch of the Outh and Rohilkhand Railway to Hardy to have been extended to Debut by a guaranteed line, 14 miles beek.

Line.

Since test some short entensions have been completed on the Record South Western Railway, and important broadtive that their Field Id and Jacoper to Allehilled, attacing the Chipa, and from Delby to Agricthough Mours. Extentive 125 and obese cancileact of the Godh and Rabillihand in Hardoi, and of the East Indian in Meerut, of the Bengal and North-Western in Oudh, and of the Rohilkhand and Kumaun in Moradabad, Nainī Tāl, Bareilly, and Budaun.

The cost of construction per mile has been-on metre-gauge Cost of lines: Lucknow-Bareilly and Rohilkhand-Kumaun, Rs. 41,503; tion. and Cawnpore-Achhnera, Rs. 46,040; on broad-gauge lines: Oudh and Rohilkhand, Rs. 70,538; and North-Western, Rs. 1,71,532. Separate details are not available for the other lines, which are partly situated in other Provinces.

The Provinces are now so well served by railways that Influence there is no difficulty in moving grain to any part in which of rail-ways. the harvest may have failed, and the result has been to equalize prices. In particular the line through Southern Bundelkhand has been of value. The chief effect of railways on the social conditions of the people has been to relax the restrictions of caste. Food is purchased at railway stations without too close inquiry into the caste of the vendor, and the convenience of swift locomotion overweighs the prejudices of the higher castes against contact with those whose touch necessitates bathing.

The use of roads for through communication has declined Roads. since the spread of railways. In the middle of the eighteenth century there were two main routes through the Provinces. One led from Delhi through Muttra to Agra, and crossing the Jumna at Etāwah, passed through Korā in Fatehpur to Allahābād. The other ran eastwards through Garhmuktesar to Morādābād, and then by way of Bareilly, Shāhjahānpur, Mallanwan (in Hardoi), Rae Bareli, Salon, and Benares to When the Provinces became British territory, camindars were responsible for local roads. The first great works undertaken by the British Government were: the grand trunk road, commenced in 1832, the line of which has been generally followed by the East Indian Railway; the road from Mirzāpur to the Deccan, and the road from Agra towards Bombay, the last two being of importance for trade, though their length in these Provinces is short, while the first was the great road to the frontier. By 1856 branches had been completed from Khurja and Delhi to Meerut; from Aligarh and Bhongaon (Mainpuri) to Agra; from Bewar and Gursahaiganj to Fatchgarh, from Kālpī to Cawnpore, from Allahābād to Jaunpur, and from Mirzapur to Jaunpur; and from Ghazīpur to Gorakhpur, with sections to Benares and Azamgarh. It was then found that the absence of roads in the Bareilly Division had enabled the Benares Division to capture the

trade in sugar; and a road was commenced from Pflibhit through Bareilly, Budaun, and Etah to the grand trunk road, and other roads from Bijnor through Meerut District to Delhi, and from Bulandshahr and Aligarh to Antipshahr. After the Mutiny an important cross-road from Banda through Fatehpur and Rae Barell to Fyzabad was undertaken. There were no metalled roads in Oudh before annexation, except that from Cawnpore to Lucknow. After the Mutiny a military road was made from Allahabad to Fyzabad, and the road from Lucknow to Fyzabad was improved, and extended to Jaunput.

The roads described above still form the principal through communications. The length of metalled roads increased from 4,681 miles in 1891 to 5,082 miles in 1901, while the length of unmetalled roads under regular repair rose from 13,603 miles to 14,167 miles. As funds become available roads are metalled, especially where they act as feeders to ruilways. Including roads maintained in private estates, forests, and the like, and also the unmetalled 10ads which are not regularly repaired, the total length of roads in 1904 was: metalled, 5,789 miles; unmetalled, 24,914 miles. Metalled roads are almost entirely under the Public Works department, and unmetalled roads under the District boards.

Convey-

The body of the ordinary country cart consists of a framework of bamboos and wood, but contains no boards. Sacking or mats are used to prevent grain or similar substances from falling out. The wheels are frequently solid, though made of several pieces of wood fitted together, and are rarely tired. Country carts vary in size according to the breed of cattle available and the state of the roads. The commonest means of conveyance of passengers is the one-horse ckka, a light two-wheeled cart, which merely consists of a box-shaped body with a lid about 4 feet square on which the driver and two or three passengers squat. In the towns improved ckkas with springs are becoming common.

Light tailways. A light railway runs from Shāhjabānpur to the Lucknow-Sitāpur-Bareilly Railway at Mailāni in Kherī District. It was originally owned by a company, but is now worked by the Bengal and North-Western Railway. An agreement has recently been made with a private firm for the construction of another light railway from the East Indian line at Shāhdara in Meerut District to Sahāranpur, which will serve a rich tract of country.

Canals.

No canals have been made exclusively for navigation. When Lord Ellenborough postponed the construction of the

Ganges Canal he declared that its chief purpose should be for navigation, but this view was successfully opposed. On the Ganges Upper and Lower Irrigation Canals, which are considered together for this purpose, the length of channel open to navigation is 412 miles. Special works have been undertaken to facilitate traffic. The Ganges main canal has several falls, and supplementary channels, each about 12 miles long and provided with a lock, were made to avoid the interruption of navigation throughout the course from Hardwar to Campore. The Campore branch was an integral part of the Ganges main canal; but since the opening of the Lower Ganges Canal the portion of the Cawnpore branch between Nanu where the Ganges Canal bifurcates and Gonalpur where the Lower Ganges Canal crosses the Cawnpore branch has been used only for navigation. The total capital expenditure on navigation works to the end of 1900-1 on the Ganges and Lower Ganges Canals was o lakhs. The gross income during the five years ending 1900-1 averaged Rs. 6,000, and the working expenses Rs. 10,000. If interest on the capital outlay be added, the annual loss has been Rs. 22,000. On the Agra Canal, with a capital expenditure of 9 lakhs, receipts averaged Rs. 4,000 and expenditure Rs. 7,000, while interest charges amounted to Rs. 35,457. The Agra Canal was closed to navigation in June, 1904.

The only steamers plying along the rivers of these Provinces Steamers. are those of the India General Navigation and Railway Company, Limited, which provide a feeder service on the Gogra. Starting from Dīgha Ghāt in Bengal the steamers call daily at Barhaj in Gorakhpur District, and every fourth day at Ajodhyā in Fyzābād, which is the farthest port reached, a distance of 293 miles from Dīgha. The passenger and goods traffic are of equal importance, and the latter includes general merchandise, jute, food-grains, wine, beer, manufactured iron, acids, and salt. The steamers can carry from 300 to 600 passengers and from 25 to 75 tons of cargo. Another line till recently called at Ghāzīpur on the Ganges.

The spread of railways has greatly interfered with the River carriage of goods by water. There is now no expenditure on traffic. the improvement of natural waterways, except on the Ganges between Allahābād and Balliā. Here an attempt is made to keep a waterway never less than 4 to 6 feet deep. This depth is sufficient for country boats and for the river steamers formerly plying. Tolls are collected in accordance with rules made under Act I of 1867, and about 1880 brought in

about Rs. 15,000 annually. Ten years later the receipts had fallen to about Rs. 10,000, and in 1903-4 they were only a little more than Rs. 7,000. The normal expenditure on the works is estimated at Rs. 8,000 to Rs. 10,000, a contribution from Provincial revenues being given when required. The country boats are clinker-built, with a burthen rarely exceeding 100 tons and usually much smaller. They are propelled by towing, punting, rowing, or sailing, according to the state of the wind, the river, and its banks.

Ferrics.

The rivers are crossed in about twenty places by hoat-bridges and ferries under the management of the Public Works department. All other public ferries are managed by District boards, except one or two leased to railways. There is a steam ferry at Ghāzīpur on the Ganges, and during the rains steamers are used at Ajodhyā, but country boats are generally used in other places.

Post Office.

The United Provinces and the Native States of Rāmpur and Tehri form, together with certain States in the Central India Agency and the State of Dholpur in Rājputāna, a postal circle under the Postmaster-General of the United Provinces. The statistics on the following page show the advance in postal business in the United Provinces in the three last decennial years, and also the figures for 1903-4. Unless otherwise expressly stated, the figures do not include those of the Central India States and Dholpur.

The figures given in the table relate to both the Imperial post and the District or local post. This latter system was a substitute for the posts which, under an old law, zamindars were compelled to maintain for the purposes of official communication, the police, and the magistracy. The personal obligation was replaced in 1863 by a cess, the proceeds of which were utilized to open post offices at places where their existence would not be warranted under the commercial principles of the Post Office. The expenditure on the District post averaged Rs. 1,86,997 per annum during the five years ending with 1903-4. The number of District post offices on March 31, 1903, was 280, and the total length of Districtpost mail lines 9,249 miles. In 1906 the reservation of part of the local rates, in which the cess above mentioned had become merged, was abolished; and the District post is now administered in the ordinary way.

l'amine. Causes. The cause of scarcity or famine in these Provinces is deficient rainfall in the south-western monsoon, resulting in a failure of the harvest. The tracts most liable to famine are

the dry tracts of Bundelkhand and the Agra Division. The submontane Districts generally get an adequate rainfall; the Meerut Division has a magnificent system of canal irrigation; while the eastern Districts and Southern Oudh are protected by an enormous number of wells. The wells, however, only partially protect the rice crop, which is the important crop in the east.

<sup>&</sup>quot; These figures include statistics for Dholpur State, for which separate figures are not on record.

From the point of view of famine the autumn is the more Harvests. important harvest, as it provides the food-supply for the masses of the people, millets and rice. The spring harvest is generally the more valuable (except in the rice tracts); but it is the revenue harvest, not the food harvest. Complete failure of any harvest is no longer possible; whether partial failure will cause scarcity or famine depends on the degree of failure and its effect on the labour market, the character of preceding harvests, and the general condition of the people. The most important crops from the point of view of famine are rice in the eastern and submontane Districts, and elsewhere millets.

When the rains fail, the Government looks out for the Warnings, regular warnings of distress. Prices rise, private charity begins

to dry up, and the beggars flock to the towns. There is great activity in the grain-trade and an increase of petty crime. The people become nervous and apprehensive. They may even take to plundering grain-dealers' shops. Cries against speculation and corners in food-grains are raised. These symptoms recur in every famine.

History. Early famines.

Famines are known to have been frequent under native rule, but beyond a few horrors that have been preserved in contemporary accounts their history has been lost. Between A.D. 1291 and 1786 thirteen famines are recorded from the neighbourhood of Delhi alone. At the close of the thirteenth century we read that the people from the Siwāliks came crowding into Delhi and in the extremity of hunger drowned themselves in the Jumna, while prices rose to four times the ordinary rates. In the second quarter of the fourteenth century the excessive taxation of Muhammad bin Tughlak aggrayated the results of drought and thousands of people died. Ibn Batūta says that he saw people eating hides; Barnī relates that man ate man; the distress lasted for years. At the end of the fourteenth century, after the ravages of Timur, the Upper Doab again suffered from famine; and in 1424 famine in Hindustan prevented the march of the royal army to Kanauj. In 1471 the Lower Doah and Bundelkhand suffered during the wars between the Lodis of Delhi and the Jaunpur kings. Two hundred years later, famine due to drought ravaged the Upper Doab in 1661. Even of famines so late as 1770 little is known that is worthy of record. In 1783-1 occurred the great famine still known as the chālisa or '40 (1783-4 = 1840 samvat), in which instructions were issued to 'Chiefs and Collectors' to regulate the price, distribution, and sale of grain, and to establish storehouses. Ten years later severe samine visited the Provinces in consequence of a failure in the monsoon of 1803, following a period of political disturbance. Relief was given by remitting over 30 lakhs of revenue, by advancing 10 lakhs to the landowners, and by offering a bounty on all grain imported into Benares, Allahābād, Cawnpore, and Fatehgarh. This was followed in 1812 by a samine in the trans-Jumna Districts, regarding which little is known.

1837-8.

In 1837-8 occurred perhaps the worst famine of the nineteenth century. From Allahābād to Delhi the famine was intense, especially between Cawnpore and Agra. The mins of 1836 had failed almost completely and previous harvests had been poor. Prices rose to about 10 seers per rupee. There were violent outbreaks of crime and the troops had to be called out. The mortality was very great, and the country did not recover for many years. The principles of modern relief policy date from the arrangements made in this famine. Remissions of revenue were granted to the amount of 95 lakhs; 20 lakhs was spent on relief works and  $3\frac{1}{2}$  lakhs on gratuitous relief.

This famine was followed by a cycle of good years. Then 1860-1. came the disturbances of the Mutiny and two years of irregular rainfall. In 1860 the monsoon failed, and famine was general in the western Districts of Bundelkhand and very severe between Agra and Delhi. More than 9 lakhs was spent on relief works and 5½ lakhs on gratuitous relief. Advances were given to the extent of 3 lakhs and 2½ lakhs of revenue was remitted. This famine is celebrated for the invention of poorhouses by Mr. (afterwards Sir) John Strachey, and for the gift of relief to parda-nashīn ladies in their homes; it was also the occasion of the first famine inquiry, in the course of which Colonel Baird-Smith drew prominent attention to the increase in staying power shown by the people. This he attributed to stability of tenure and canal irrigation.

The Rājputāna famine of 1868 affected the whole of the 1868. west of the Provinces and Bundelkhand, and was very severe in the trans-Jumna Districts. Sir William Muir, the Lieutenant-Governor, issued the famous order insisting on the personal responsibility of officers to save every life that could be saved. The relief system, however, broke down under the pressure of immigration from Native States. About 25 lakhs was spent on relief works and  $4\frac{1}{2}$  lakhs on gratuitous relief. About 10 lakhs was advanced to cultivators, but remissions of revenue were small.

The Bihār famine of 1873-4 was accompanied by scarcity 1873-4. in the adjacent Districts on the east of these Provinces, and also in Bundelkhand. It was found, however, that little relief was required.

The failure of the monsoon in 1877 was the worst on record, 1877-8. and the autumn crop on unirrigated lands was lost; but good rains in October and December secured the spring harvest. Relief works were opened in September, but people did not come in any numbers until early in 1878. They left the works for the spring harvest, but returned when that had been gathered, and stayed until the rains fell in August, 1878. Only 16 lakhs was spent on relief works, and about 4 lakhs on gratuitous relief.

н

U.P. 1

1890-2.

In 1890 both crops failed in Kumaun, which hardly produces sufficient grain to support its inhabitants even in good seasons. The people had money, but there was no grain to buy. Accordingly Government imported 45,000 maunds of grain. This met the situation, and no further relief was required. Similar conditions in 1892 led to similar measures. Again about 45,000 maunds of grain were imported by Government agency. This proved to be sufficient in Garhwäl, but relief works were opened elsewhere. These failed to draw any considerable numbers, and an early monsoon in 1892 put an end to the scarcity, which in neither year had been acute. On both occasions the expenditure was small, most of the money spent having been recovered.

1896-7.

The monsoon of 1895 failed in Bundelkhand, and by the end of the year it was necessary to start relief. The rains of the year following failed more or less generally and famine became general over the Provinces, excluding the Meant Division. A very elaborate organization of relief was undertaken. Altogether 282 million 'units' were relieved. The direct expenditure on relief, excluding establishment and incidental charges, was 167 lakhs. Loans and advances amounted to 40 lakhs, revenue was suspended to the extent of nearly 145 lakhs, and remitted in the case of 65 lakhs more.

Statistics.

The effects of the famine of 1868-9 and 1877-8 were still to he traced in the census statistics of 1907, the furner in the low proportion of persons at ages between thirty and thirty-five, and the latter in that at twenty to twenty-five. The vital statistics for the years 1894 and 1897 illustrate the difference in the effects of bad fever and famine. Infantile mortality was greater in 1894 than in 1897; but this was probably due to a higher birth-rate in 1893 than in 1896. From the ages five to fifteen famine sweeps off more persons than fever. Between the ages of fifteen and forty fever is more deadly to females than famine, \_ ... and less fatal to males, the explanation being that this is the child-bearing age for females. From forty to sixty famine claims more victims from both sexes than fever, which again assumes the upper hand in the last stages of life. fever and famine reduce the birth-rate, but the recovery after a famine is immediate and more marked than after fever.

Protection.

Much has been done to protect the Provinces, against the effects of drought. The Doãb is intersected with canals drawn from the Ganges or the Jumna, the greatest being the UPPER GANGES CANAL, capable of irrigating about 12 million

<sup>&</sup>quot; Unit " means one person relieved for one day.

acres. The Lower Ganges Canal has already irrigated more than a million acres, and is designed to irrigate 11 million Altogether 1,551 miles of canals and branches are open, with 8,081 miles of distributaries, 3,432 miles of drains, and 331 miles of escapes, navigation channels, mill-runs, &c. In addition there are about half a million masonry wells, of which the greater number are found in the eastern Districts and southern Oudh. The Government offers advances on easy terms for the construction of wells to all who can give any security. As yet but little advantage has been taken of the offer. A programme for extending canals and banking up small streams to form reservoirs is now being carried out in Bundelkhand, where the principal canal is taken from the BETWA.

Great attention has been paid to the improvement of communications. In 1904, 3,636 miles of railway were open to traffic, and some 300 miles in addition were under construction or about to be constructed, while surveys have been sanctioned for 165 miles more. The railways are fed by an elaborate system of roads that are regularly kept up.

The first Lieutenant-Governor of the North-Western Pro-Administravinces was Sir C. T. Metcalfe, who was appointed in 1836. Govern-Excluding temporary incumbents, his successors, with the dates ment. of their appointment, were: Mr. T. C. Robertson (1840); Mr. J. Thomason (1843); Mr. J. R. Colvin (1853); Sir G. F. Edmonstone (1859); Hon. E. Drummond (1863); Sir W. Muir (1868); Sir J. Strachey (1874); and Sir G. Couper The Governor-General-in-Council three times administered the Provinces in person: namely, from 1838 to 1840 (Lord Auckland), from 1842 to 1843 (Lord Ellenborough), and from 1858 to 1859 (Lord Canning). The North-Western Provinces and Oudh were united in 1877 under Sir G. Couper as Lieutenant-Governor and Chief Commissioner, a post which has been since held by Sir A. C. Lyall (1882), Sir A. Colvin (1887), Sir C. H. T. Crosthwaite (1892), Sir A. P. MacDonnell (1895), Sir James Digges La Touche (1901), and Sir J. P. Hewett (1906). The title of Chief Commissioner was dropped in 1902, when the new name of United Provinces was introduced. The Secretariat staff consists of five secretaries and five under-secretaries. Three of the secretaries belong to the Indian Civil Service; the chief secretary is in charge of the Revenue, Appointment, General Administration, Political, and Forest departments; another secretary of the Medical, Judicial, Police, Educational, and Sanitation departments;

and the third of the Local Self-Government, Financial, Municipal, Miscellaneous, and Separate Revenue departments. The other two secretaries belong to the Public Works department, and are also Chief Engineers. One of these deals with the Irrigation branch, and the other with Roads and Buildings. The Board of Revenue is the highest court of appeal in revenue and rent cases, and has also important executive duties. the chief revenue authority in the Provinces, controlling the assessment and collection of land revenue, income tax, slamps, and excise, and is also the Court of Wards. There are two permanent members, and a third member was temporarily sanctioned for four years from 1902, on account of the pressure of work due to settlement and the operations of the Bundelkhand Encumbered Estates Act. The Board has a secretary and joint-secretary who belong to the Indian Civil Service, and a junior secretary who belongs to the Provincial Service. The heads of Provincial departments are the Inspector-General of Police, Director of Public Instruction, Inspector-General of Jails, Inspector-General of Civil Hospitals, Sanitary Commissioner, Director of Land Records and Agriculture, and Commissioner of Excise and Stamps, who is also Inspector-General of Registration. The Accountant-General and Postmaster-General represent Imperial departments under the Government of India.

Districts and Divisions.

There are forty-eight British Districts, thirty-six being in the Province of Agra and twelve in Oudh. The average area is about 2,200 square miles, and the average population a million. Districts vary in size from 977 square miles (Lucknow) to 5,223 square miles (Mirzāpur) in the plains, while the hill Districts of Almora and Garhwal have an area of 5,416 and 5,629 square miles respectively. Each District is in charge of a District officer, who is called Collector and Magistrate in the Province of Agra, excluding the Kumaun Division, and Deputy-Commissioner and Magistrate in the Kumaun Division and in Oudh. The Districts are grouped together in Divisions; each under a Commissioner, to whom the District officers are subordinate. There are nine Divisions, having an average area of nearly 12,000 square miles, and a population of 5 to 6 millions. The number of Districts in a Division varies from three (Kumaun and Gorakhpur) to five (Benares), six (Meerut, Agra, Bareilly, Lucknow, and Fyzābād), or seven (Allahābād). The most important subdivision of a District is the tahsil, of which there are 217, with an average area of 500 square miles and a population of 220,000. For judicial purposes (both criminal and revenue) the District officer assigns a subdivision, which consists of one or more tahsils, according to the number of officers available, to each of his subordinates, who may be Covenanted Civilians (Joint and Assistant Magistrates and Assistant Collectors), or members of the Provincial Service (Deputy-Collectors and Magistrates). In a few large Districts (e. g. Saharanpur, Banda, Hamīrpur, Jhansi, Gorakhpur, Nainī Tāl, Almorā, and Garhwāl) one or more of the subdivisional officers reside in their subdivisions, but as a rule they are stationed at head-quarters. In the revenue system of the Mughals the Sarkar roughly corresponded in area to the Division, and the Dastur to the District, though the limits of particular units have largely altered.

Each tahsīl is in charge of a tahsīldār, who is primarily Subresponsible for the collection of revenue, and also exercises ordinate judicial powers (criminal and revenue). Taksīls are divided into parganas (which are chiefly of importance in the periodical settlement of land revenue, when they are taken as convenient units). The parganas correspond very closely both in name and area with the mahāls recorded in the Ain-i-Akbarī. ordinate to the tahsildars are the supervisor kanungos, of whom there are, on an average, about three to each talisil, or 731 in all. These officials supervise the work of the patwaris or village accountants, and check their papers, besides performing miscellaneous functions.

The village autonomy is chiefly confined to the internal Village relations of the villagers. As in most parts of India, menials system. (such as the messenger, watchman, barber, and sweeper) and artisans (blacksmith, carpenter, and potter) are village servants and receive a share in the crops for ordinary services. Previous to British rule the village system in Northern India was local government by an aristocracy. The lower castes managed their own social affairs by a panchāyat or council in each caste, but had no voice beyond this, and were largely in the position of serfs. The higher castes had no panchayats, but the chief tenants or camindars managed the affairs of the village. Land revenue and canal rates are generally collected (except in the eastern Districts) by the lambardar, who is selected by the subdivisional officer after nomination by the whole body of co-sharers. Apart from this, no regular link existed between the people at large and the officials of government, till, in 1894, headmen, generally selected from the lambardars, were appointed in every village and large hamlet. The headman (mukhia) has no powers of any kind, but in consideration of

his duties of renorting crime under the Criminal Procedure Code he is allowed to possess a sword without a licence. An attempt recently made to associate the headman with the police in criminal investigations has been abandoned.

Nauve States.

The Commissioners of the Bareilly and Kumaun Divisions are Political Agents for the Native States of Rampur and Tehri respectively. Each of these States is administered by the chief with the help of a Council or Darbar. In Rampur the Minister is at present (1906) an official lent by the British Government. Both chiefs now exercise full powers of civil, criminal, and revenue administration; but the Raja of Tehri submits the records of cases in which he has ordered capital punishment for the approval of the Commissioner of Kumaun. The Commissioner of Benares is a Political Agent for the purpose of paying certain political pensions.

Council.

Legislation A Council for legislative purposes way and institute in 1886. It consisted of nine members, of whom not fewer than three were non-officials, the Lieutenant-Governor presiding. The Indian Councils Act of 1892 provided for an enlargement of both the functions and the numbers of the members. The Council now consists of a maximum number of fifteen members, of whom not more than seven may be officials. Of the eight non-official members, six are appointed by the Lieutenant-Governor on the recommendation of the representatives of two groups of selected municipal brards. two groups of District boards, the Upper India Chamber of Commerce, and the Senate of the Allahabad University. The annual financial statement is explained by the Financial Secretary to Government and discussed by the members, who are not, however, permitted to refer to Imperial finance. Questions may be asked at any meeting on any subject, but are limited to matters of fact in the case of subjects which are, or have been, the subject of controversy between the Government of India or the Secretary of State and the Local Government.

The following are the chief legislative measures specially affecting the Provinces which have been passed since 1880, excluding Acts subsequently repealed:-

## A. In the Governor-General's Council.

Vaccination		•			(XIII of 1880).
Benares Family Domains		•	-		(XIV of 1881).
Indian Ensements .	•	•	•	•	(V of 1882, extended
\$7U					by VIII of 1891).
Northern India Ferries	•	•	•	•	(III of 1886).

General Clauses (I of 1904)	
Local and Rural Police Rates (II of 1906	١.
United Provinces District Boards . (III of 1906	

Except in the Kumaun Division, which will be referred to Adminislater, the subordinate civil courts are distinct from the courts tration of dealing with criminal and rent and revenue cases. The High justice. Court in the Province of Agra, and the Court of the Judicial Commissioner in Oudh, are the final appellate authorities in both criminal and civil cases. The former consists of a Chief Justice and five puisne Judges, and the latter of a Judicial Commissioner and two Additional Commissioners. District and Additional District Judges, of whom there are twenty-one in the Province of Agra and six in Oudh, have both original and appellate jurisdiction in civil and criminal cases, and occasional appellate jurisdiction in rent cases. District officers and their assistants, including tahsildars, preside in both criminal and rent and revenue courts. In Kumaun the Commissioner is a High Court in civil cases and a District Judge in criminal cases, while the District officers and their assistants exercise civil, criminal, and rent and revenue powers. In the larger cantonments the Cantonment Magistrates have limited powers as Judges of a Small Cause Court.

Civil justice.

The ordinary civil courts of original jurisdiction are those of the Munsif, Subordinate Judge, Judge of Small Cause Courts. and District Judge. There are sixty-eight Munsils in the Province of Agra and twenty-five in Oudh, whose jurisdiction extends to all suits the value of which does not exceed Rs. 1,000. In Oudh a few Munsifs have been specially empowered to decide suits of a value up to Rs. 2,000. Subordinate Judges. of whom there are nineteen in Agra and twelve in Oudh, may, try suits of any value in Agra, and suits the value of which does not exceed Rs. 5,000 in Oudh, unless they are specially authorized to try suits without limit. Appeals from the decrees of Munsifs and Subordinate Judges, where the value of the suit does not exceed Rs. 5,000, lie to the District Judge, who, may, and generally does, transfer appeals from the decrees of Munsifs to be heard by Subordinate Judges. Appeals from the decrees of District Judges, and from the decrees of Subordinate Judges in cases exceeding Rs. 5,000 in value, lie to the High Court in the Province of Agm and to the Judicial Commissioner's Court in Oudh. There are five Judges of Small Cause Courts, whose jurisdiction extends to suits valued at Rs. 500, in the Districts of Allahabad, Cawapore, Benares, Agm, and Lucknow; but all Subordinate Judges and many selected Munsifs have limited jurisdiction as Judges of Small Cause Courts.

The principal statistics of civil suits are shown in the table on page 151. There has been a striking increase in the number of cases disposed of by Small Cause Courts, which averaged 32,479 from 1881 to 1890 and 59,458 from 1891 to 1900. This is more than counterbalanced by the decrease in cases tried by Subordinate and District Civil Courts. The increase in rent litigation is due to a change in the law in the Province of Agra made so recently that its permanent effect cannot be gauged. The figures for civil suits proper do not include those for Kumaun, where the number of suits decided averaged 5,320 from 1881 to 1890, 5,092 from 1891 to 1900, and was 4,228 in 1901, and 4,187 in 1903.

In Oudh there are a few Honorary Munsifs, and the system is now being extended to the Province of Agra. Their jurisdiction is similar to that of Judges of Small Cause Courts, but is limited to suits not exceeding Rs. 200 in value, and they follow the procedure of ordinary Munsifs. Provision has been made for the establishment of village courts by (United Provinces) Act III of 1892, and Village Munsifs are being appointed. Only simple cases are cognizable by these courts, and jurisdic-

tion is fixed at a maximum of Rs. 20. In 1903 the seventeen Honorary Munsifs in Oudh decided 1,750 cases; and 435 Village Munsifs, of whom 178 were in the Province of Agra and 257 in Oudh, decided 7,221 cases.

The stipendiary Magistrates include talisildars, Deputy-Criminal Magistrates, Assistant and Joint-Magistrates, and District courts. Magistrates. The first-named usually have second or third class powers, while Deputy-Magistrates and Covenanted Civilians are invested with full powers after completely passing their examinations. There are also eleven regular Cantonment Magistrates, and a few Special Magistrates in the Forest and Canal departments. In the larger towns and in a few rural areas there are benches of Honorary Magistrates with 278 members: seventy-six other Honorary Magistrates are empowered to try criminal cases, chiefly in their own estates.

The chief statistics of criminal justice are given in the table on page 151. There has recently been a steady though small reduction in the total number of persons convicted, which fell from an average of 236,765 in the decade 1881-90 to 228,881 in the following decade. The decrease is chiefly noticeable in the convictions for offences against person and property, which fell by more than 6 per cent., and indicates a distinct improvement in public safety.

All District Judges are Registrars under the Registration Registra-Act, 1877. In Dehra Dun the Subordinate Judge, and in the tion. Kumaun Division Deputy-Commissioners, hold the same office. The Provinces are divided for registration purposes into subdistricts, which usually correspond with talistls; and a subregistrar is appointed for each sub-district, the work of these officials being supervised by two inspectors. The number of offices was 362 in 1881, 347 in 1891, 271 in 1901, and 264 in 1904. The reduction is chiefly due to reorganizations in Oudh, where the number was formerly excessive. The number of documents registered has increased from an average of 187,530 in 1881-90 to 216,867 in 1891-1900. In 1904 it was 207,556.

The main source of public income under native rule was Finance; derived from an assessment on land. In addition to this native many cesses or taxes were levied, some being items of imperial receipt, while others were merely the irregular extortions which formed part of the remuneration of the officials, or the income of the zamīndārs. Chief among the imperial taxes were excise. customs, taxes on manufactures (especially weaving) and houses. and town duties on sales or octroi. The officials and the land-

holders levied transit dues on goods, and presents on different occasions, such as festivals. In Oudh, at the time of annexation, the nominal demand for land revenue was about 130 lakhs, which was increased by fees and cesses to nearly 170 lakhs. The summary settlement of the land revenue after the Mutiny amounted to less than 106 lakhs.

liritish rule. The striking feature of the first seventy years of the nineteenth century is the strict control over expenditure exercised by the Supreme Government. The proceeds of a few cesses and minor sources of income could alone be spent by the Provincial Government without sanction.

Decentralization, 1871-7 The first scheme of decentralization took effect from 1871-2, when the administration of certain departments (jails, registration, police, education, medical services, excluding the salaries of superior officers, printing, roads, buildings, and miscellaneous public works) was made over to the Provincial Government. The receipts, from those which were productive, were estimated at 13½ lakhs and the charges at 98 lakhs, and a fixed annual allotment of 84½ lakhs was made to cover the difference. These arrangements lasted for six years with a few small alterations.

1877-82.

In 1877-8 a further step was taken, and items which supplied revenue more capable of development were transferred to the control of the Provincial Government. These included excisustamps, law and justice, collections from Government estates in the Tarai, Bhābar, and Southern Mirzāpur, and a few miscellaneous items, while the Provincial Government was made responsible for expenditure on the services connected with land revenue, excise, stamps, administration, stationery, law and justice, and a few other items. The total Provincial expenditure was thus raised to 274 lakhs, which was to be met by estimated receipts of 142 lakhs and an allotment of 84 lakhs, the balance being a charge on Local funds which were not yet separated from Provincial accounts. Variations from the estimated receipts were to be shared equally between the Provincial and Imperial Governments. These figures also cover the separate arrangements under which productive canals and railways of purely local importance were entrusted to the Provincial Government, which was further made responsible for a part of the expenditure on famine relief. By the former arrangement expenditure amounting to 41 lakhs was transferred with an income of 31 lakhs, while, to meet the deficiency, a licence tax yielding 81 lakhs was imposed in the Province of Agra under Act VIII of 1877, which was afterwards revised and extended to Oudh by Act II of 1878. To meet the expenditure on famine relief, special rates were authorized by Acts III and IV of 1878, which also gave power to reserve portions of the local rates for Provincial canals and railways. The new arrangements worked satisfactorily, and the Provincial and Local balances, which were still practically identical, increased to 1354 lakhs.

The next change made was to substitute a fixed proportion 1882-7. of certain revenues for a lump assignment. Thus the revenue from, and expenditure on account of, forests (which had previously been Imperial), excise, assessed taxes, stamps, and registration were divided equally between the Imperial and Provincial accounts. Charges on account of pensions were made entirely Provincial, and the arrangements made for canals and railways were continued. The expenditure thus assigned exceeded the income, but a further addition was made of 25:45 per cent. of the land revenue, by which it was calculated that a surplus of about 5 lakhs would be available. The total annual income was estimated at 300% lakhs, and the expenditure at 3041 lakhs. At the same time taxation was reduced by the abolition of the cesses from which pativaris (village accountants) and kānungos (inspectors of patroāris) were paid in the Province of Agra, and by the transfer of the liability for the pay of the same officials from the samindurs to Government in Oudh. In the last year of the contract the old licence tax was replaced by the Imperial income tax (Act II of 1886).

In the next quinquennial period the Provincial share of land 1887-02. revenue and excise was reduced to one-quarter, while the share in stamps was raised to three-quarters, and the cost of survey and settlement, of which three-quarters had previously been met from Imperial revenues, was made entirely Provincial. The railways which had been built from Provincial savings now became Imperial, with one exception. It was estimated that the income, after a lump deduction of 4% lakhs in favour of Imperial revenue, would be 224 lakhs and the expendi-New taxation was imposed in 1880 in the ture 321 lakhs. shape of a patwari rate1; but the proceeds (which were credited to a new fund) were really a subvention to Imperial revenues, as the lump deduction was increased by 20 laklis, the estimated yield of the tax. Savings amounting to 22 lakhs in settlement expenditure were resumed by the Supreme Government.

<sup>1</sup> This rate was finally abolished in 1906.

1892-7.

Railways were entirely removed from the Provincial account in 1892. The new settlement was made with no other change in the method of sharing, but the annual lump deduction from Provincial receipts was fixed at 25 laklis, the estimated income and expenditure being taken as 3152 laklis. A sum of 5 laklis annually was also given for reforms in the police. This settlement was soon found to be madequate, and in 1894 necessary reforms in District establishment and in the survey system could be carried out only by charging their cost to the patwari fund. By 1896 the Provincial balance had fallen to 17 laklis, and in the last year of the settlement faming caused Provincial bankruptcy.

1697-1904. Pending the restoration of normal conditions, a temporary arrangement was made for one year, the Provincial share of the heads of revenue most affected (land revenue, excise, rates, and irrigation) being taken at fixed sums. Another provisional settlement followed on the same lines as those for 1887 and 1892, with the exception that the net revenue from irrigation ('major' works), which had fluctuated considerably, was now equally divided and compensation was given in the lump adjusting figure. This settlement was originally made for two years, but it was continued by short extensions up to 1904.

General

The expenditure of the Provincial Government during the early settlements was designedly economical, in order to accumulate reserves which could be spent on productive works. Imperial considerations, however, led to the removal from the account of the Provincial railways, on which 120 lakhs had been expended. The method of adjusting the terms of settlement on the basis of previous expenditure had tended to stereotype a low scale. Excluding the capital cost of railways and canals, the actual Provincial expenditure was 3221 lakhs a year from 1882 to 1887, and 320 lakhs a year from 1887 to 1892. A more liberal allowance was made in the temporary sculements from 1897 to 1904, and the average expenditure from 1897 to 1902 was 363 lakhs. This included extra grants of 10 lakhs in 1898-9, 13 lakhs in 1902-3, and 124 lakhs in 1903-4, of which specified amounts were allotted for expenditure on education, public works, and the pay of establishments in District offices and courts.

The variations in the receipts and expenditure under different heads are shown in the tables on pages 152 and 153, and the most important are referred to in describing the various branches of administration concerned.

Present

From 1904 a new settlement has been made, which will

ordinarily not be altered until the variations over a term of arrangeyears from the standard now taken have become considerable. ments. The Provincial share of receipts and expenditure is fixed at a quarter in the case of excise, assessed taxes, forests, and registration, and at one-half in the case of stamps; while in the case of land revenue the Provincial Government obtains onequarter of the receipts, excluding those from Government estates which are entirely Provincial, and bears half the charges. 'Major' irrigation works have been made entirely Provincial, but a net revenue from them of at least 40 lakhs is guaranteed. The estimated revenue for 1904-5 was 3721 lakhs. A lump sum of 30 lakhs has been given to start the new settlement, besides some smaller amounts for special purposes.

Proprietary rights in land existed in most parts of the Pro-Land vinces before the advent of British rule, but were not strictly revenue Tenures. defined, and the sale of such rights was almost unknown. In Proprie-Bundelkhand and in Kumaun the system was ryotwāri, while tary. elsewhere it was generally camindari, though in the eastern Districts it so far resembled ryotwāri that the principle of the joint responsibility of all the co-sharers for payment of the land revenue due from the village was not recognized, each cosharer being responsible for his own quota only. No distinction was made between these two classes in the revenue system introduced by the British, but the effects of the difference in constitution are still noticeable, and joint responsibility is enforced with difficulty in some parts of the Provinces.

Double proprietary rights were found to exist in some Taluk-Districts, mostly in estates which were known as talukdāri, dārs. where the inferior proprietors were called zamindars, biswadars. birtiās, or mukaddams. The talukdāri estates had their origin in various ways. Some of the talukdars were representatives of old princely houses who had retained or acquired authority over considerable areas, or were chiefs of territorial clans. Others were officials who had by degrees acquired similar authority which tended to become hereditary. In the disorder prevalent during the eighteenth century talukas grew or fell to pieces according to the personal character and power of the talukdar. Powerful talukdars absorbed the property of their smaller neighbours, some of whom were forced to accept a subordinate position, while others voluntarily placed their villages under the control of the talukdar for the sake of protection. the other hand, in the old territorial talukas it had been the practice of the talukdars to grant subordinate rights in portions of their hereditary domains. Such grants were of various

kinds, and the most common form was that of birt, a term meaning 'cession'.' They were made for a money payment, for services, to the heirs of men who had died in battle (marzent), and frequently in the northern Districts for the clearance of jungle, or reclamation of waste. The early experience of the British in Bengal pointed to the advisability of engaging with the actual village proprietors, and not with the talukdurs, where these were officials or had but recently acquired their authority; and this policy was adopted in the settlements of Benares and the Ceded and Conquered Provinces. Thus in the Province of Agra the double proprietary form of tenure is now rare, except in a few Districts. In Oudir the system had flourished under the misrule of the first fifty years of the nineteenth century, and talukdars held two-thirds of the villages in the Province. The policy of setting aside the talukdars was applied to Oudh in 1856, when they lost nearly one-half of their talukas, but after the Mutiny the status before 1856 was revived. In the Province of Agra the engagement for payment of revenue is usually taken from the subordinate proprietor, who also pays a fixed percentage on the revenue (generally 10 per cent.) into the treasury, which is disbursed by Government to the talukdar. In Oudh the settlement is made with the talukdar, and the subordinate proprietor is protected by a sub-settlement. The latter manages the estate for which he has a sub-settlement, and pays the revenue demand plus a fixed amount to the talukdör direct. The area held in talukdöri tenure amounts to 55 per cent, of the assessed and 51 per cent, of the total area in Oudh, but only a small portion of this is sub-settled.

Other subordinate rights.

Other subordinate rights exist, which extend only to specific plots in a village, and not, as in the case of a sub-settlement, to an entire village or mahāl. These rights arose in various ways. Sometimes they are a vestige of a former proprietary right. In other cases their origin was a grant similar in character to those already described, or they were the religious and charitable grants commonly known as sankalp. The sum payable to proprietors by under-proprietors, as the holders of these rights are called, is liable to revision at each settlement. In the Benares Division, which is permanently settled, similar rights are held by permanent tenure-holders whose tent is not liable to alteration.

Revenue

For revenue purposes the unit is the mahal, which may be defined as the area for which a separate agreement for the

<sup>1</sup> J. Hooper, Bast: Settlement Report, p. 34.

payment of land revenue is taken. A mahāl may be a single village or part of a village, or may include more than one village. In the eastern Districts complex mahals occur, which often extend to parts of a number of villages.

The ordinary landholder is known as zamīndār, and zamīn-Zamīndari tenures are divided into four classes: (a) samīndāri dars. proper, in which the profits (but not the land) of a whole mahāl are divided among the co-sharers, if there are more than one, according to their shares; (b) pattīdāri, where the whole land (not the profits) of a village is divided between the different co-sharers or groups of co-sharers in definite fractions of the total; (c) imperfect pattīdāri, where part of the land is undivided as in samīndāri, and part is divided as in pattīdāri, the profits of the undivided land being shared in approximately the same proportions as those of the divided land; (d) bhaiyāchārā, where the land is also divided, but where each share is a definite area or specific plot and is not defined as a fraction of the whole. Revenue is usually paid in each class by a representative of the co-sharers who is called the lambardar; one or more lambardars are appointed in each mahāl. In zamīndāri mahāls owned by several co-sharers, and in pattīdāri mahāls, the relations between landlord and tenant are managed by representative co-sharers in consultation with the whole body. In the eastern Districts, as already noted, the lambardari system is not successful, owing to the weakness of joint responsibility, and individual co-sharers frequently manage their own shares and pay their revenue direct.

In the permanently-settled Districts of the Benares Division Tenant a special class of tenants is found who have heritable and rights. transferable rights at a fixed rent, and are liable to eviction only for default in paying rent. Other tenants are divided into two classes according as they have or have not a right of occupancy; but the term 'occupancy tenant' bears a different meaning in each Province, and the non-occupancy tenant in Oudh has certain rights which he does not possess in Agra. In the older Province the occupancy tenant has a heritable, but not a transferable, right to hold certain land, and is not liable to eviction except for default in paying rent, while the rent payable cannot be enhanced except by mutual agreement or by order of a revenue court, generally on the ground that it is below the prevailing standard of rent for similar land. Up to the passing of Act X of 1859, it was left to the Settlement officer to record whether any particular tenant had

<sup>1</sup> Subletting is allowed under certain restrictions.

occupancy rights or not according to the custom of the locality. That statute, however, provided that any tenant acquired occupancy rights in land which he had cultivated continuously from year to year, without holding a lease, for at least twelve years, unless the land was the home farm (ar) of a proprietor or was already included in an occupancy holding. The increase of population and growing competition. for land led in some parts of the Provinces to a strong desire on the part of the landlords to check the growth of occupancy rights, which was carried into effect by manipulating the village records, by giving short leases, or by changing the holding of a cultivator before the right had accrued. The law was accordingly altered by (United Provinces) Act II of 1901. which provides that the change of a holding or dispossession for less than a year does not operate as a break in the period of twelve years, while a lease does not prevent the accrual of occupancy rights unless it is for at least seven years. A landholder who parts with his proprietary rights obtains occupancy rights in his home farm at a privileged rate of rent 25 per cent. below the rate generally payable for similar land in the neighbourhood by non-occupancy tenants. This is called 'exproprietary right.' In Oudh the so-called 'occupancy tenant' corresponds to the 'ex-proprietary tenant' in the Province of Agra, and no tenant acquires occupancy rights by prescription; the rent of the occupancy tenant cannot be enhanced beyond a rate 12% per cent. lower than that ordinarily paid for similar land in the neighbourhood by cultivators with no such right. Other tenants in the Province of Agra are merely tenants-at-will, with no rights or privileges beyond those contained in their leases or agreements. In Oudh any person admitted to the cultivation of land acquires certain rights. He is entitled to hold it for seven years at the same rent, and at the end of the period the rent cannot be enhanced by more than 61 per cent, whether let to the sitting tenant or to a new-comer. On the death of a tenant the limitation is broken and a fresh contract may be made. Some other peculiarities of tenure are found in the Kumaun DIVISION and in DEHRA DEN DISTRICT.

Azsessment of land revenue. Benares From the earliest times in India the state has been entitled to a share of the actual produce of the land, and the famous settlement made by Akbar merely carried out this principle in detail. For convenience the share of produce was often converted into a money-rate, and when British rule commenced money-rates were not uncommon. The Benares Division

came under the sovereignty of the Company in 1775, but for more than thirteen years the administration was left to the Rājā of Benares, who at first paid a fixed sum of 23 lakhs. After the disturbance of 1781, which arose out of a claim by Warren Hastings for an increased payment in time of war, this was raised to 40 lakhs; but in 1788 Jonathan Duncan, who had recently been appointed Resident at Benares, was authorized to interfere in the system of revenue management, which had become the cause of much oppression and distress. The strict principles laid down by Akbar had been neglected, and the revenue was simply levied at the highest sum which anybody would offer. Duncan fixed standard rates for the estimated produce of different classes of soil and standard prices, and obtained valuations of the produce of parganas from the revenue officials called kānungos. The share of the gross produce to be taken as revenue varied in different places, and was sometimes as much as a half. Some land paid specific rates per bigha. The estimates were checked by local inquiry and by comparison with earlier assessments. The Amil or native collector received one-tenth of the revenue fixed, and various smaller deductions were made in favour of the kanungos and the samindars. The summary settlement thus made yielded 35% lakhs, rising to 38 lakhs. It was then carefully revised with a view to the demand being made permanent; the revision was completed in 1700, and after a few corrections the settlement was declared unalterable by Regulation I of 1795.

A similar system was applied to what is now the Province Ceded and of Agra, and it was intended to make two settlements for Conquered Provinces. three years each and a third for four years, and then fix the demand in perpetuity. But the Court of Directors refused to sanction a permanent settlement, and short-term assessments were continued. The system was, however, very defective. It usually depended on the estimates of the kānungos and the accounts of the patwaris, both of which were unreliable, checked by information derived from enemies of the zamīndārs.

After much discussion, Regulation VII of 1822 provided Regulanew and improved methods. These included a survey, the of 1822. preparation of a careful record of all rights, and a description of the rates of cash-rents and the method of division of produce in grain-rented land. The assessment was regulated so as to leave the samindars a net profit amounting to 20 per cent. on the revenue payable by them. This Regulation marks the first advance towards a systematic and detailed

assessment on the rental fassets' of each village; but the inquiries involved were elaborate and minute, and during the next ten years little progress was made. In 1822 it was stated that the settlement of one District would not be finished for A good deal of information was obtained regarding actual 'assets' and rates; but in determining the 'assets' attention was chiefly paid to estimates of the produce. which were calculated by various methods, while the process of bargaining between the Collector and the samindar still continued. A few officers had already realized that the simplest way to ascertain the 'assets' was to obtain a correct rent-roll. In 1832 inquiries into the amount of produce were stopped, and Regulation IX of 1833 finally laid down the new procedure. Deputy-Collectors were appointed to assist in the supervision and miscellaneous work. Village maps and a field-book were prepared by revenue surveyors, and made over to the tahsildar and kanungo for completion. A rent-roll was then prepared, and statements of the revenue demand, receipts, and balances for ten years were drawn up. The Collector inspected the village and fixed the demand on a consideration of these papers, the Government share of the rental 'assets' amounting to 66 per cent. or two-thirds. The settlement thus made was fixed for a period of approximately thirty years in each District, and this has been the ordinary term in all later settlements.

Regulation IX of 1833.

Second regular settlement.

Various improvements were made in the second regular settlement. The assessments were based upon the average, rental 'assets' of estates, as to which more accurate information had now become available. But the patwaris' papers were still far from reliable, and the 'assets' were calculated on rates of rent found by the Settlement officer to be paid in the locality. Parganas were divided into circles, the soils in each circle were classified, and standard rates of rent were selected for each class. Up to 1868 the soil of each field was separately classified, but in that year the work of checking soil classifications was lightened by a system of demarcating blocks of soils on village maps, invented by Mr. (now Sir) Charles Elliott. It is important to notice that the estimated rental, on which the assessment was based, might be higher than the amount actually paid in a given village, but it represented the rental which the Settlement officer believed, from his inspection of similar villages, could be realized. The proportion of rental 'assets' taken in this settlement was fixed at 50 per cent., or one-half, and has not been altered since.

In spite of frequent recommendations by the Government Permanent of India, the Court of Directors had refused to sanction settlea permanent settlement in the early years of the nineteenth century. When the second regular settlement was commencing the Mutiny suddenly broke out and threw back progress in every direction. Famine in 1860 caused more depression. and the idea of a permanent settlement was revived. While details were being discussed, important facts were discovered, In some tracts rents were found to be increasing enormously. while in others they were so low that an assessment at the rate prevailing in neighbouring tracts would have been excessive. In 1874 the question was laid aside for a time, but a few years later financial considerations led to the issue of rules that settlements were to be revised only where an increase of revenue was expected, or where the distribution of the old assessment had become unequal. In 1882 an attempt was made to devise a scheme by which revenue should be enhanced only in the case of an increase in the area under cultivation, a rise in prices, or an increase in production due -to improvements made at Government expense. Detailed criticism showed the impracticability of the scheme, and the idea of a permanent settlement was abandoned in 1885.

The discussion led, however, to simplification of procedure. Third As early as 1872 several officers had expressed the view that regular the patwaris' records could be so improved in accuracy as to ment. form a reliable basis of assessment, and in the Rae Bareli District of Oudh they had in fact been so used. Steps were taken to provide for more careful preparation and check of these papers, and revised settlement rules were issued in 1884 and 1886. Briefly, the change made lay in the fact that, while the important factor in assessment hitherto had been the pargana or circle rate ascertained by inquiry and selection, the new system took the actual rent-roll recorded by the patwari as the basis of the assessment and used the pargana or circle rates as a check. No prospective increase in rents, except an increase which could be claimed at once, can now be considered in calculating the 'assets,' Concessions are made for improvements carried out at the cost of private individuals or by loans from Government. In 1894 the cost of settlements was materially cheapened by improvements in the method of survey and revision of records, and the resettlement of a District now takes only about three years instead of six to ten years as at the second settlement.

In Oudh the assessment has been one-half of the rental Oudh.

'assets' since annexation. A summary settlement was made in 1856, but the records generally perished in the Mutiny. A second summary settlement followed in 1858, and the first regular settlement was made between 1860 and 1878, and the second between 1893 and 1903. The rules in force have been similar to those in the Province of Agra.

Incidence.

The incidence of land revenue is approximately half of the incidence of rent 'assets,' which has already been discussed. There is no definite relation between the assessment and gross produce. The most recent estimate places the share of the gross produce received by the landlord at one-fourth to onefifth in grain-rented tracts and one-sixth to one-seventh in cash-rented areas, and the revenue demand is rather less than one-half of these proportions. There is no difference in the standard of comfort or in the prosperity of the masses between the permanently-settled Districts of the Benares Division and the adjacent Districts of Agra and Oudh where periodical revisions are made, though it was calculated in 1889 that the Benares Division, under the rules prevailing elsewhere, would yield a revenue 15 to 20 lakhs higher than its present pasessment of about 47 lakhs. The experience of the famine of 1896-7 showed that no connexion can be traced between the incidence of the land revenue demand and distress due to famine, which depends on other more important factors,

Suspension and remission of revenue.

In agricultural calamities of any kind a Collector has power to postpone the collection of revenue for six months, and a Commissioner for a year longer. If great loss of crops takes place, the Government may suspend or remit revenue and at the same time order the suspension or remission of rent. The policy of giving immediate relief is followed, and when scarcity is imminent, owing to the failure of rains, the agricultural position is closely watched. In mahāls subject to fluvial action the assessment is revised every five years, and a similar system is now being introduced into the whole of Bundelkhand, which is peculiarly liable to fluctuations in prosperity.

Restrictions on transfer, (United Provinces) Act II of 1900 has provided a system of entail in Oudh which can, however, be applied only in the case of talukdārs and grantees whose estates are subject to the rule of primogeniture. Distress and indebtedness in Jhānsi District led to the enactment of the Jhānsi Encumbered Estates Act (XVI of 1882), which provided for inquiry into debts by a special judge, and for liquidation of the amounts found to be justly due, with the aid of loans from Government.

The operations were successful; but the effect was not lasting, as there was no restriction upon the right of transfer, and the proprietors, whose debts had been liquidated, soon began to incur fresh liabilities. Similar provisions have now been applied to the whole of Bundelkhand by (United Provinces) Act I of 1903; and this has been supplemented by another Act (II of 1903), which limits alienation of land, by either sale or mortgage, from a member of specified agricultural castes to members of other castes.

A large revenue is derived from the opium monopoly, which Opium. is, however, an item of Imperial receipts. The administration is directed by an Opium Agent, who is now appointed from the Indian Civil Service in these Provinces, though entirely subordinate to the Board of Revenue in Bengal. He is assisted by twenty sub-deputy and about thirty assistant opium agents. The cultivation of poppy without a licence is forbidden under Act XIII of 1857 in all parts of the Provinces. except Jaunsar Bawar to the north of Dehra Dun. It is allowed only in certain Districts selected so as to render supervision easy, and it is forbidden in the neighbourhood of most large The largest area is in Oudh cities to prevent smuggling. and the Agra Division; but cultivation is also permitted in parts of the Benares, Allahābād, Rohilkhand, and Gorakhpur Divisions. During the rains cultivators collect at convenient centres and receive advances for the coming season. poppy is sown in October, and the opium is obtained by lancing the heads and scraping off the dried juice in the following February and March. The opium is collected, weighed, and classified at fixed centres, where the cultivators are paid at rates varying with the class of opium supplied by them. It is then packed and forwarded to the factory at Ghāzīpur, the head-quarters of the Agent. Here it is reduced to a uniform consistence, which varies according as the drug is intended for export or for consumption in India. The accounts of the cultivators are finally adjusted after the opium has been again examined in the factory. In 1903 they received a little more than Rs. 6 per seer.

The principal statistics of opium cultivation and production are given on the following page.

The system of giving advances for cultivation and also for the construction of wells makes poppy cultivation popular within limits. High castes object to growing poppy, both on religious grounds and because the cultivation requires a great deal of light labour. In the case of low castes this is supplied

by the women and children of the cultivators; and the area undertaken by each cultivator is limited by the amount of domestic labour which he can command, as the profits rapidly diminish when hired labour is required. The crop which competes most with the poppy is wheat, especially when the cultivators anticipate an unfavourable season, or high prices

Years.	Area (n ncres,	Number of clasts for export,	Gross value.	Net revenue.
1881-90 (average) . 1891-1900 (average) 1901 1903	259,182 289,163 386,262 374,817	28,477 21,509 23,007 22,424	Rs. 3,33,23,530 2,69,65,808 3,38,60,555 2,87,36,510	Rs. 2,07,89,988 1,47,26,975 1,69,12,909 59,78,265

for wheat. The net revenue depends chiefly on the price realized for the opium exported, which is technically known as 'provision' opium, and to a small extent upon the consumption of excise opium, the cost price of which, at present taken at Rs.  $8\frac{1}{2}$  per seer, is credited to the Opium department.

The Salt department of Northern India, including other Provinces, is administered by a Commissioner directly under the Government of India, with a Deputy-Commissioner and a Personal Assistant. In the United Provinces there are two divisions of the Internal branch, each under an Assistant Commissioner, with head-quarters at Agra and Allahābād respectively; the Agra Division contains three circles and the Allahābād two, each in charge of a Superintendent.

To prevent the illicit manufacture of salt, licences are issued under Act XII of 1882, and the rules made under it, which prohibit the manufacture of salt, saltpetre, every form of sulphate and carbonate of soda, and all other substances made from saline earth, except in accordance with the terms of the licences. The annual charges for these are Rs. 2 for crude saltpetre, or sulphate of soda (by artificial heat), or carbonate of soda; Rs. 10 for sulphate of soda by solar heat; and Rs. 50 for refined saltpetre, including eduction of salt. Purified salt may not be removed from a factory till after examination by an officer of the Salt department and payment of the excise duty of Rs. 121 a maund (823 lb.). Unrefined salt, which is so impure as to be inedible, may be excised for industrial purposes on payment of R. 1 a maund. Refiners, if they prefer it, are also allowed to destroy in the presence of

Salt.

Reduced from Rs. 23 to Rs. 2 in 1903, and to Rs. 74 in 1905.

an official the salt produced by them. Sulphate of soda must be examined by the salt officials before it is allowed to leave a factory; but it is not liable to any duty, and other substances may be disposed of without examination, though the preventive staff exercises a very close supervision over all licensed factories.

The quantity of salt and refined saltpetre educed in recent years is shown below, with values where these could be ascertained. Crude saltpetre is not included, as no account is kept of its manufacture:—

Minerals.	18	880-1. 18		90-t.	1900-r.		1903-4.	
, Armaga	Tons.	Value.	Tons.	Value.	Tons.	Value,	Tons.	Value.
Purified salt   Impure   Refined salt-	₹,344	Rs {	2,504 444	Rs. 1,38,179	3,150 2,301	Rs. 1,31,176	1,777 3,706	Rs. 2,67,076
petre	4,150	6,31,412	5,566	20,94,650	4448	9,68,744	5,526	12,03,544

The consumption of salt in the Provinces has increased from 2,656,000 maunds in 1880-1 to 3,698,000 in 1890-1, 3,685,666 in 1900-1, and 3,974,462 in 1903-4, representing a consumption in seers per head of about 2.4, 3.3, 3.1, and 3.3 respectively.

The amount of salt produced locally does not form 1 per cent. of the total amount consumed in the Provinces, more than half of which comes from Sāmbhar in Rājputāna. Saltpetre, both refined and unrefined, is largely exported to Calcutta, and the manufacture depends to a considerable extent on the demand and price there. Thus the number of licences issued for manufacture of crude saltpetre varied from 9,239 in 1895-6 to 4,896 in 1900-1 and 5,015 in 1903-4.

The receipts of the Salt department in 1900-1 were: licence fees, Rs. 22,000; duty, Rs. 89,000; total, Rs. 1,11,000; and in 1903-4 Rs. 20,000, Rs. 73,000, and Rs. 93,000 under the same heads.

The Excise department is administered by a Commissioner Excise. of Excise subordinate to the Board of Revenue. The super-intendence in Districts is entrusted to a member of the District staff in addition to his ordinary duties, assisted in, most cases by an excise inspector. The excise revenue is derived from three main heads—liquor, opium, and drugs—and consists of duty and licence fees for preparation or vend.

The excise receipts from liquor, which form about 70 per Liquor. cent. of the total excise revenue, fall under various heads.

Country liquor is usually manufactured in certain distilleries belonging to Government by licensed distillers, who supply their own plant and material, and pay a licence fee of Rs. 3 When liquor is issued for retail vend, a month per still, a still-head duty is levied which is in most Districts Rs. 25 per gallon of London proof and Rs. 1-14 per gallon of 250 under London proof. The duty is higher in a number of large towns. The right to retail liquor at each of the licensed shops is sold by auction. In the less accessible tracts on the northern, eastern, and southern boundaries of the Provinces, the combined right to manufacture and sell country liquor at specified shops is sold by auction, and no still-head duty is levied. The right to sell the sap of palm-trees (fari or sendhi) is also sold by auction, and in some Districts this includes the preparation of fermented liquors made from herbs or rice. Rum is made in a private distillery near Shālıjahānpur after European methods, and pays a duty of Rs. 4 per gallon when issued for consumption in these Provinces or the Punjab, Rs. 5 in the case of exports to the Central Provinces, and Rs. 6 in the case of Assam and Bengal. A second licence for manufacturing rum has recently (1904) been given to a firm in Cawnpore. Malt liquors are brewed after European methods in private breweries at Mussoorie, Lucknow, Naini Tal, and Rānīkhet, and a duty of one anna per gallon is levied. duty besides a licence fee is levied on imported European The monthly licence fee is ordinarily Rs. 32 for wholesale and Rs. 16 for retail vend, and this includes the right to sell country rum and beer. The receipts on account of country liquor have varied from an average of 342 lakhs in 1881-90 and 33½ lakhs in 1891-1900, to 43 lakhs in 1900-1, and 61 lakhs in 1903-4. The receipts in the same periods have been: for English liquor (including duty on rum exported to other Provinces), 3 lakhs, 4½ lakhs, 5¾ lakhs, and 8¼ lakhs; and for tari, 1 lakh to 13 lakhs.

Drngs.

The drugs, other than opium, used in the Provinces are those derived from the hemp plant (Cannabis sativa or indica). Both gānja (the unfertilized female flowers) and charas (the resin) are smoked, while bhang (the dried leaves) is used for the preparation of a drink or mixed with sweetmeats. Gānja is obtained from Bengal, the Central Provinces, or Central India, and pays a duty varying from Rs. 6 to Rs. 9 per seer in the case of Bengal, and Rs. 4 in other cases. Charas is chiefly imported from Central Asia, but a little is made in Kumaun, and it pays a duty of Rs. 4 to Rs. 6 per seer. The

right to sell all three drugs, including bhang, which is collected from the wild plant in many Districts and from the cultivated plant in Farrukhābād, is sold by auction <sup>1</sup>. The total receipts have risen from an average of  $5\frac{3}{4}$  lakhs in 1881-90 and  $8\frac{1}{4}$  lakhs in 1891-1900, to  $12\frac{3}{4}$  lakhs in 1900-1, and  $18\frac{1}{4}$  lakhs in 1903-4.

Opium is supplied from the Ghāzīpur factory through Opium. District treasuries to licensed vendors at a price varying in different Districts from Rs. 16 to Rs. 18 per seer. The difference between this price and the cost of the opium, which is taken at Rs. 8½ per seer, is credited to excise receipts. In some Districts, chiefly those in which poppy is grown, the Government treasurers and their assistants are allowed to sell the drug; but the right to sell at licensed shops is sold by auction. The total receipts have risen from an average of 7 lakhs in 1881–1900 to 7½ lakhs in 1900–1 and 8-3 lakhs in 1903–4.

The total net receipts from excise have increased from an General.

average of 51 lakhs in 1881-90 and 54 lakhs in 1891-1900 to 70 lakhs in 1900-1 and 97 lakhs in 1903-4, and the incidence of net receipts per head of population in annas has similarly risen from 1.3 to 1.7, 2.3, and 2.9. This increase is largely owing to higher taxation, for it is the policy of Government to raise excise duties as long as the danger of smuggling Public opinion is consulted in regard to is not incurred. the location and number of shops. Although the use of intoxicants is forbidden by the sacred books of both Hindus and Muhammadans, excise was a form of revenue under native rulers. The moderate use of opium as a drink or in pills is not usually condemned, though smoking the drug is reprobated. Liquor is used chiefly by the lower castes, and when consumed by members of higher castes the practice is concealed, except in the case of individuals who have abandoned the strict rules of caste. The highly literate caste of Kayasths is making successful efforts to discourage intemperance among its members. The use of bhang as a drink is hardly more injurious than the use of tea; but ganja and charas-smoking are con-The modern religious movements all favour temperance; but the effect of English education is double. In so far as it weakens the caste system, or tends to act as a sol-

vent on orthodox beliefs, it removes a check on intemperance,

<sup>&</sup>lt;sup>1</sup> In 1906 a duty of Rs. 8 per acre was levied on the cultivation of the hemp plant, and a duty of Rs. 4 per maund on bhang imported from certain Districts where it is cultivated or grows spontaneously.

especially in regard to the use of liquor. On the other hand, it has been beneficial in producing higher ethical standards.

Stamps.

The stamp revenue is divided into two main heads, according as it is derived from judicial or non-judicial stamps. The net receipts under the first head have risen from an average of 16 lakhs in 1881-90 and 53 lakhs in 1891-1900 to 62 lakhs in 1900-1 and 63 lakhs in 1903-4. Variations are due to the same causes as variations in litigation, which have already been referred to, and to alterations in the law. Net receipts from non-judicial stamps have risen from an average of 15 lakhs in 1881-90 and 17 lakhs in 1891-1900 to 18 lakhs in 1900-1 and 19 lakhs in 1903-4. They are largely affected by agricultural conditions.

Income

The net revenue from income tax has varied from an average of 21 lakhs in 1886-90 and 23 lakhs in 1891-1900 to 25 lakhs in 1900-1, and 20 lakhs in 1903-4. Only about three persons are assessed in every 2,000 of the population, and the incidence is 8 pies per head.

Local selfgovernment. District and local boards.

It has been explained in dealing with finance that up to 1871 the only revenue over which the Provincial Government had free control was that raised from a few sources, such as ferries, pounds, and cesses on land. The cesses were voluntary payments which the samindars engaged to pay along with land revenue. They replaced the old liability to maintain roads, post lines, and village police, and also provided funds for schools. In 1871 the cesses received legal sanction, and then amounted to 10 per cent, of the revenue demand in the Province of Agra 2, and 21 per cent. in Oudh, where the samindars were still liable for the pay of the village police. receipts formed a Provincial fund, from which allotments were placed at the disposal of District committees, half the members of which were non-officials appointed by Government. These committees replaced a number of distinct bodies which for varying periods had assisted District officers in the management of roads, education, and dispensaries, and their functions were confined to these matters. The rates were raised in 1878 by an additional famine cess of a per cent, on the revenue in each Province, and from the same year the difference between Provincial and Local expenditure became more clearly marked.

In 1882 a scheme was developed which became law as

In this year the limit below which exemption from income tax may be claimed was raised from Rs. 500 to Rs. 1,000.

<sup>\*</sup> In the permanently settled Districts the cesses take the form of an acreage rate.

Act XIV of 1883. This provided for a board in each District. with power to supervise, subject to certain restrictions, the control and administration of roads, schools, dispensaries, and similar public institutions, besides other local works for the comfort, convenience, or interest of the public. There were also local boards in taksīks, but these had no independent authority and no longer exist. The Act provided for the establishment of a fund in each District, to which were credited the receipts from local rates, less deductions for certain items, such as watchmen, District post, Provincial railways and canals, and the famine rate, which were not under the control of the boards. The net receipts on account of pounds and ferries were also allotted, and the District fund obtained other receipts from the services controlled by the board. The practical effect of the arrangement made was that the cost of the services controlled by the boards exceeded the funds at their disposal, and for some years the contribution from Provincial revenues required to make up the deficit was exactly calculated to produce equilibrium. The District funds thus had no balance from year to year, and the system resembled that of Provincial finance before 1870. Up to 1807 the boards were chiefly consultative bodies; and the members, with some exceptions, took little interest in any branch of the administration, except schools and hospitals, partly no doubt owing to the absence of financial independence.

In 1897 steps were taken to make the District funds real entities. Opening balances were allotted from a grant of 4 lakhs made by the Government of India, and an attempt was made to ascertain the normal income and expenditure in each District. Annual grants were then made from Provincial revenues sufficient to provide a small margin, and it was contemplated to fix these for a term of years; but this was not found possible, owing to the unsettled condition of Provincial finance. Balances were, however, carried forward from year to year; and (U.P.) Act II of 1906 has paved the way for more complete financial independence by abolishing all deductions from the rates, except those for village watchmen. By (U.P.) Act III of 1906 the sphere of usefulness of the boards has been considerably enlarged. The famine cess imposed in 1878 was abolished in 1905, and in the same year large grants-in-aid were made from Imperial revenues. In times of scarcity District boards open small relief works to test the existence of distress; but when this is established, the works are taken over by the Public Works department. In 1903-4 there were 48 District boards in the Provinces, with 938 members, of whom 255 were appointed ex officio, 74 were nominated, and 609 were elected. The general statistics of the income and expenditure of the boards since 1897-8 are given in the table on page 154.

Municipalities.

When the province of Benares was acquired, it was found that minor sanitary improvements were regularly carried out by the shopkeepers of Benares city, who privately contributed a small sum annually and arranged for its expenditure. Towns were, however, usually administered by the hotwal or police officer, who was responsible for elementary conservancy and the regulation of the residences of 'butchers, hunters of animals, washers of the dead, and sweepers,' in addition to his police duties. The early British administration of towns was confined to the introduction of regular police in the more important places; but by Regulation XVI of 1814 ward committees, consisting of householders, were appointed in the more important places to assess and collect a tax from which subordinate police were paid. Act XV of 1837 made it legal to apply savings from this rate to improvements in the towns where it was levied, and committees of non-official persons were appointed to assist in the supervision. The first real attempt at municipal self-government was effected by Act X of 1842. This authorized the Government to appoint representative committees in any town where two-thirds of the householders applied for the extension of the Act. The committees so formed had power to impose a rate of 5 per cent, on the annual value of premises, and the proceeds were applied to improvements. The Act was not successful and was repealed by Act XXVI of 1850, which gave the Government a freer hand in the constitution of municipal committees, and also allowed town duties or octroi to be imposed, while the committees were authorized to make rules, with the sanction of Government, defining and prohibiting nuisances. Act XXVI of 1850 was applied to Oudh, but in 1864 a special Act was passed to regulate the Lucknow municipality. In 1867 the municipal law in Oudh was amended, and a year later an important Act (VI of 1868) was passed for the Province of Agra. This provided for the gradual introduction of the elective system, and enlarged the basis of taxation by permitting a tax on houses and land up to 72 per cent. of the annual value, and also taxes on professions and trades, on carriages and animals used for draught or burden, and tolls, besides octroi. The duties of the municipal committees were

defined more clearly, and expenditure on education was permitted. The law in both Provinces was assimilated by Act XV of 1873, which made a few alterations and conferred power to regulate carriages, &c., plying for hire. The next important change was a part of the general scheme for developing local self-government which was set on foot in 1881. Act XV of 1883 provided for the elective principle in all cases, and was extended to all municipalities, except six which were considered backward. Increased functions were allotted to Commissioners with regard to the supervision of municipal work, and the powers of the boards to make rules for the prevention of nuisances were more clearly defined. The Acts of 1873 and 1883 were replaced by (United Provinces) Act I of 1900, which provided for the growing needs of municipal administration. Larger powers were given to deal with matters of public interest and convenience, such as the erection of buildings and the regulation of dangerous and offensive trades. and new taxes were legalized. Since the passing of the Act of 1883 municipal self-government has progressed rapidly, and methods of conservancy, collection of taxes, and the like have been much improved. A great deal has been done to improve the octroi system by facilitating the grant of refunds, and by establishing bonded warehouses; and in Cawnpore, where through trade is very important, a terminal tax at low rates with no refunds has been adopted. The position of municipal servants who receive no pension has been improved by the establishment of provident funds. In 1808 a system of peripatetic audit was instituted to supervise the accounts of both District boards and municipalities, which has been of great value. Municipal self-government is more successful than the District board system; but close supervision and control are still required, and the District Magistrate is generally chairman, though elected by the board in most places. In 1901 there were 104 municipalities, with a total population of 3.3 millions. The population of six towns was over 100,000, that of seventytwo ranged between 10,000 and 100,000, and that of twenty-six was less than 10,000. No change was made till 1904, when sixteen towns were constituted 'notified areas' under (United Provinces) Act I of 1900. The administration of these is simpler than in municipalities; they are managed by small committees appointed by the Government, and only selected portions of the Act are applied to them.

The old law of 1814, requiring the inhabitants of important Act XX of towns to maintain police for watch and ward, was amended in <sup>1856</sup>.

1816, and Act XX of 1856 consolidated these rules, and included the provision made in 1837 for expenditure on sanitation. Act XX of 1856, which may be applied to any place not merely an agricultural village, provides for the levy of a rate on annual value, or a tax on circumstances and property, the proceeds being applied to watch and ward and sanitation. The assessment is made by a small committee, which is generally consulted in regard to the expenditure.

Municipal finance. The general features of municipal finance are shown in the table on page 155. Octroi supplies about half of the total income, and the largest single item of expenditure is on conservancy. The incidence of taxation per head averaged Rs. 1-2-8 in 1900-1 and Rs. 1-4-1 in 1902-3. It is highest in the hill stations, where it rises to Rs. 7-12-11 in Mussoorie and Rs. 7-15-0 in Naini Tâl. The total number of members of municipal boards in 1903-4 was 1,395, of whom 1,030 were elected; 345 members were officials and 1,050 non-officials; 267 were Europeans and 1,128 natives. There are now only two places in which the elective principle is not in force.

Public Works. The Public Works department is divided into the Buildings and Roads branch and the Irrigation branch, each of which is administered by a Chief Engineer, who is also a Secretary to Government. The Provinces are divided into three circles and ten divisions for the administration of buildings and roads, and into four circles and twenty divisions for irrigation purposes. Each circle is in charge of a Superintending Engineer, and each division in charge of an Executive Engineer. The whole of the irrigation works constructed or maintained by Government are in charge of the department. Nearly all metalled roads, and also bridges on second-class roads, and generally all works costing more than Rs. 1,000 are in charge of the Buildings and Roads branch, except in municipalities.

Three railways have been constructed at the cost of Provincial revenues: namely, the branch from Dildārnagar on the East Indian Railway to Tārī Ghāt opposite Ghāzīpur, the Cawnpore-Achhnerā Railway, and the Lucknow-Sītāpur State Railway; but they were transferred to the control of the Director-General of State Railways in 1891. The most important irrigation works within the last twenty years have been the construction of the Betwā Canal, the Fatchpur branch of the Lower Ganges Canal, the Māt branch of the main Ganges Canal, improvements in the Rohilkhand and Tarai Canals, and extensive drainage operations in the Doār Districts of the Meerut and Agra Divisions. The table on page 153 shows

ARMY 127

that expenditure on other public works rose from an average of 29 lakhs in 1881-90 to an average of 33 lakhs in 1891-1900. The road system of the Provinces was fairly complete by 1881, and improvements since then have chiefly been devoted to metalling. In particular, cart-roads have been made in Kumaun from the foot of the hills to Nainī Tāl. Rānīkhet. Almora, and the tea plantations and along the pilgrim routes. Important bridges at Kichhā between Bareilly and Kāthgodām and over the Hindan river in Meerut and Muzassarnagar Districts may be mentioned, and others are now (1906) being constructed in Gorakhpur and Sultanpur. The Thomason Hospital and Lunatic Asylum at Agra, the Muir Central College at Allahābād, the Thomason Engineering College at Roorkee, the Judicial Commissioner's Court at Lucknow, the present Government House and Secretariat offices at Nainī Tāl, and Judge's courts at Fyzābād. Alīgarh, and Gondā have all been built or considerably improved within the last twenty years. Owing to the encroachment of the Ganges, the headquarters station and offices of Ballia District have been reconstructed. Large schemes for water-supply have been undertaken since 1890 in Agra, Allahābād, Benares, Cawnpore, Lucknow, and Meerut, and drainage schemes in Agra, Benares, Farrukhābād, and Cawnpore. Drainage schemes for Lucknow and Fyzābād are now under consideration. Such schemes are drawn up under the superintendence of the Sanitary Engineer with Government, who ranks as a Superintending Engineer.

The total strength of the army in the Provinces in 1903 was: Army. British troops, 16,554; Native, 15,428; total, 31,982. The whole area of the Provinces is included in the Eastern Command and forms part of three divisions. The Meerut division includes Meerut, Chakrātā, Muttra, Roorkee, Agra, Almorā, Bareilly, Chaubattiā with Rānīkhet, Lansdowne, Shāhjahānpur, and Dehra Dun; the Lucknow division, Lucknow, Cawnpore, Fyzābād, Fatehgarh, Allahābād, Benares, and Sītāpur; and the Mhow division, Ihānsi. There is an arsenal at Allahābād, an army clothing (formerly gun-carriage) factory at Fatehgarh, and a harness and saddlery factory at Cawnpore. There are volunteer corps at Allahābād, Lucknow, Benares, Gorakhpur, Cawnpore, Dehra Dūn, Nainī Tāl, Barcilly, Mussoorie, and Agra, with detachments at many other places. The total strength of the volunteers in 1903 was 4,901, of whom 580 were Light Horse or Mounted Rifles.

The Rāmpur State maintains a regiment of Imperial Service cavalry, 317 strong in 1904, besides State troops classed as

follows: artillery, 206 with twenty-three guns; cavalry, 152; infantry, 1,159; and alighols or irregulars, 692. The army of Tehri State consists of 113 infantry with two cannon.

Police.

Under native rule regular police existed only in the larger towns, and samindars were held responsible for law and order in rural tracts. In the British administration a distinction has generally been made between the police maintained to keep the peace and to prevent and detect crime, and the police whose duty was confined to watch and ward. A force for the former purpose was established at the cost of Government, while the watchmen or chaukidars were paid from a special cess in the larger towns and were long maintained by the samindars in rural areas, receiving grants of land.

Regular police.

The regular police up to the time of the Mutiny consisted of a number of establishments having no connexion with each During the Mutiny these forces melted away with -startling rapidity; and on the restoration of order a military police force was raised, consisting of a battalion of infantry and cavalry in each Division, the scale providing for one man to every 1,260 of population and every 4% square miles of area. In 1860 a Commission sat at Calcutta, and its conclusions were discussed by a local committee sitting at the same time, and by another local committee in 1863. The result was the organization of a force under Act V of 1861, on the model of the Irish Constabulary, in which all the miscellaneous establishments were absorbed. An Inspector-General had already been appointed in 1860, and subordinate to him were two Deputy-Inspectors-General and a Superintendent of Police in each District, except the Kumaun Division. There was also a staff of inspectors, sub-inspectors, head constables, and constables. At the first organization on these principles the strength of the regular police was 32,828 men, and the cost was 49-2 lakhs; but by 1877, when the two Provinces had been amalgamated, this had been reduced to a force of 22,767 men, costing 35-8 In 1890 a local commission inquired into the working and condition of the force and recommended an addition of 9½ lakhs to the expenditure of 37 lakhs then incurred. forms costing 81 lakhs were sanctioned, and other reforms costing several lakhs in addition are in progress. The force was then about 25,000 strong, and the changes proposed added only a few hundred men. In 1901 the regular force cost 51.7 lakhs, including superintendence (1.6 lakhs), District executive

<sup>&</sup>lt;sup>1</sup> Further reforms suggested by the Police Commission of 1902-3 are now being carried out.

force (48.5 lakhs), and railway police (1.5 lakhs). In 1904 the police force was administered by an Inspector-General, with three Deputies (one of whom was in charge of railways) and two Assistants, forty-six District Superintendents, two Railway Superintendents, and thirty Assistant Superintendents. In recruiting constables, regard is had to caste, physical development, and character. Less than a quarter of the men can read and write, but all the officers are literate. Head constables are recruited from the ranks, and are eligible for higher promotion: but 85 per cent, of the sub-inspectors appointed annually are now recruited directly from men who have passed the University Entrance examination, and only 15 per cent. are promoted head constables. Sub-inspectors are trained at the Police Training School at Moradabad. Increases in the pay of police since the commission of 1800 and the direct recruitment of officers have worked great changes in the force. The Police Training School, founded in 1803, has had valuable results, and large sums have recently been spent in improving the accommodation provided for police officials. Several criminal tribes, such as Barwars in Gonda, Sansias in Kheri, Sanaurias in Jhansi, and Doms in Gorakhpur, are under surveillance, and efforts are made to provide land for cultivation by them: but progress in reform is slow. There is a reformatory for juvenile No separate detective staff exists: offenders at Chunār. but one of the Deputy-Inspectors-General collates weekly reports received from the Districts, and circulates an account of special crime. Identification of criminals by means of anthropometry was commenced about 1895; but since 1900 more reliance has been placed on finger-prints. The armed police is specially recruited and is armed with Martini rifles. The railway police is under a Deputy-Inspector-General and two Superintendents.

The village chaukīdārs in the Province of Agra were paid Rural directly by the zamīndārs, generally by grants of land and police. a share of produce, up to the time of the first regular settlement. From 1833 it was left to the Settlement officer and Magistrate to decide whether the chaukīdārs should be paid in cash from the proceeds of a rate at 3 per cent. on the annual value of land, and such a system was introduced in many Districts. From 1855 this system was gradually extended to all Districts. In Oudh, after the Mutiny, it was decided to revert to the old method of holding the zamīndārs responsible, and this continued up to 1895, when a system of cash payments was begun and a cess was levied under (United Provinces)

U.P. I. K

Jails.

The administration of the Jail department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service. Each of the Central jails is in charge of a Special Superintendent, who also administers the District jail at the same place. Other District jails are in charge of Civil Surgeons. There is a jail at the head-quarters of almost The main statistics are given in the table on page 157. In 1903 there were six Central jails, forty-four District jails, and six subsidiary jails, the total number of inmates being 23,147. The cost was nearly 12 lakhs; or Rs. 51.4 per head. The principal industries carried on in fails are weaving cotton cloth, carpets, blankets, and matting, grinding corn, and gardening. In 1903 a sum of 2 lakhs was carned. Tent-making is confined to the Fatehgarh Central jail, and the tents are chiefly made for the public service. Forms are printed in the Central jails at Naint near Allahabad, and at The mortality in jails is much below that of the population at large, and it is found that prisoners generally increase in weight. Distress invariably adds to the jail population, and in 1897 the number rose to 36,257.

Education. History.

A college was founded at Benares in 1791 to cultivate the laws, literature, and religion of the Hindus, and to supply qualified assistants for European Judges. In 1823 the Agra College was established from funds left by Pandit Gangādhar. Eight schools were opened at various times between 1825 and 1837 under the direction of the Educational Committee, which were at first chiefly for Oriental learning. From 1835 English education was fostered in accordance with Lord William Bentinck's minute, inspired by Lord Macaulay. The control of education was made over to the Local Government in 1843, and it was at once decided that indigenous schools should be aided instead of the existing institutions described above, which were expensive and not satisfactory. Indigenous schools consisted of those in which reading and writing the vernacular

in the Nagari character and a little arithmetic were taught, and those in which Persian, which fill recently had been the court language, was the medium. Textbooks in the vernacular were for the first time drawn up and circulated, and rewards were given to deserving teachers. In 1840 a scheme costing half a lakh was sanctioned, which included the establishment of a model school at the head-quarters of each talisil in eight Districts, and a visitor-general, with a District visitor and two or three pargana visitors, in each District. Five years later the Collector of Muttra induced the zamindars to subscribe a cess by which primary schools were established for groups of villages, and the system rapidly extended to other Districts. The progress made was commended in the Directors' dispatch of 1854, which laid down a comprehensive scheme for the whole of India. The department was then constituted with a Director, assisted by two Inspectors, and its efforts at first aimed at the establishment of the tahsili and rural schools described above. With the exception of the two colleges and one high school, secondary education was chiefly looked after by various missionary bodies, which then maintained two colleges at Agra and one at Benares, besides ten schools. District schools were not generally established till 1867. Oudh the first educational institutions were District schools, chiefly intended to educate the children of the higher classes: these were started by private subscriptions, aided by Government grants, in every District between 1850 and 1862. Talisīlī schools, in some of which English was taught, were opened between 1861 and 1865; and in 1864 a department was constituted with a Director and two Inspectors, and funds were provided for primary education by a cess similar to that contributed in the Province of Agra. When the Provinces were united in 1877 education in Oudh was more backward than in Agra; but much has been done to improve it. University education in the modern sense commenced in 1860 with the affiliation of colleges to the Calcutta University; and in 1872 the growing needs of the Provinces led to the foundation of the Muir Central College at Allahabad, which was intended to be the focus of an improved system. The Allahābād University was constituted in 1887.

In 1904 the department was administered by the Director, Present an Assistant Director, six Inspectors, and eleven Assistant organiza-Inspectors. The professorial staff consists of two Principals, eleven Professors, two Assistant Professors, two Law Readers, and the Principals of the Training College and Reformatory

1903-4. No degree in engineering is conferred by the University, but certificates of proficiency are given by the college. Since 1896 classes for mechanics, industrial training in printing. photography, and photo-mechanical work, and for art handiwork have been opened. Non-commissioned officers of the British and Native army are also trained here. No colleges teach law exclusively, but in nine institutions classes are held for this subject. A training college for teachers was opened at Allahābād in 1900 and had forty-eight students in 1903-4.

In 1903-4 the total University expenditure was Rs. 49,000, which was met almost entirely from examination fees. Government colleges cost 3.8 lakhs, aided colleges 2 lakhs, and unaided colleges Rs. 84,000. Four years' attendance is required for the attainment of the B.A. degree. The hostel or boarding system is an old one, but has been greatly developed in recent In 1903-4, out of 1,944 students in colleges, 796 were residing in hostels, chiefly unaided. The principal statistics of University education are shown below:-

	_	1880-1.	1890-1.	1900-1.	1903-4.

Higher and Special Degrees .		7	11	29	24

NOTE.—From 1800-t onwards, the numbers represent all the results at the Allahahad University, including students from other Provinces.

Secondary schools are divided according to the curriculum Secondary into high and middle schools. In the former English is taught education up to the standard of the University Entrance and the School Final examinations. Middle schools are divided according as English is or is not taught. The number of secondary schools for boys rose from 487 in 1891 to 502 in 1901 and 508 in 1904; and the number of scholars from 51,420 to 66,746 and 71,827. Of these schools 46 were maintained by Government, including 34 high schools; 313 were maintained by District and municipal boards; 110 were aided schools, and 36 were unaided. Grants to aided schools are given with regard to the class of institution, the expenditure incurred on tuition by the managers, the number of pupils under instruction, and the general condition of the school. The ordinary grants are Rs. 750 for the high section, Rs. 400 for the upper middle section, and Rs. 250 for the lower middle section of a school; but these are liable to reduction, and may also be supplemented by grants at rates not exceeding Rs. 3 for each

scholar in the high or middle section, Rs. 2 in the upper, and Rs. 1½ in the lower primary sections. The proportion of the male population of school-going age under secondary instruction in 1901 was 1.81 per cent. Teachers in middle schools are paid from Rs. 8 to Rs. 25 a month.

Primary education (boys).

Primary schools are divided into two sections. In the lower section reading, writing, arithmetic up to the four compound rules, elementary geography, drawing, object lessons, and drill are taught. In the upper section the same subjects are taught to a higher standard. The number of schools for boys has risen from 4,758 in 1891 to 6,982 in 1901 and 8,070 in 1904; and the number of pupils from 149,262 to 262,659 and 330,387. Up to 1895 the old system of niding indigenous schools had been gradually discontinued, but it was then revived with very beneficial results. Primary education is almost entirely in the hands of the District and municipal boards, which managed 5,320 schools in 1904, while Government managed only 14; 2,644 were aided, and 90 were privately managed without aid. Teachers in primary schools must hold a certificate of having passed the Normal school examination, unless certificated men are not available. The minimum rate of pay is Rs. 8 a month, and the maximum about Rs. 15. '-

Female education.

The number of institutions for female education has increased from 391 in 1881 to 499 in 1891 and 637 in 1901, and the number of pupils from 9,422 to 13,870 and 21,314. In 1903 there were 800 institutions with 26,048 pupils. Though numbers have increased the total results are still yery small, and in 1901 only 0.62 per cent. of the female population of schoolgoing age was under instruction. There is a direct prejudice against female education in most parts of the Provinces, though the Arya Samāj and a few advanced natives, especially in the larger towns, are striving to remove it. Missionary enterprise has done much, especially in the Meerut and Robilkhand Divisions, where the American Methodist Mission is at work. In 1900 the Protestant missions in these Provinces had 13,220 girls under tuition, and were attempting to educate 14,245 pupils in sanānas. Government has now reopened a Normal school for women at Lucknow, and special efforts are being made by grants from Provincial revenues and District board funds.

Special schools.

In 1904 four training schools for masters, with 475 students, were maintained by Government. One Government school for training mistresses contained twenty-one students, and three private schools had forty-five female students. There

were two medical schools at Agra for male and female students. with 260 scholars on the rolls. An industrial school is maintained at Lucknow, and industrial classes also exist in Christ Church College at Cawnpore. The Agricultural School at Campore contained fifty-nine students, most of whom were attending to qualify as kānungos. Commercial classes exist in a few schools and colleges, notably at the Reid Christian College in Lucknow, where shorthand and typewriting are taught. The Imperial Forest School at Dehra Dün teaches forestry and is divided into two sections. The upper class reads in English for the higher standard or Ranger's certificate, and the lower class in vernacular for the lower standard or Forester's certificate.

The largest institution for Europeans and Eurasians in European the Provinces is the Martinière School at Lucknow, which is and entirely independent of Government aid and educates about education. 275 boys and 75 girls. In addition to this, there were forty schools in 1881, forty-five in 1891, and sixty-eight in 1901, with 3,247, 2,815, and 4,211 pupils. In 1904 there were sixty-nine schools for Europeans and Eurasians, of which fifty were aided, and the number of pupils was 4,376. Of these schools, twenty-one are in the two hill stations-Naini Tal and Mussoonie-with nearly half the total number of scholars. The examination results show considerable improvement in secondary education. The main results in 1903-4 are: B.A., 4; First Arts, 14; Roorkee, 32; Matriculation, 7; High school, 136; Middle, 186; and Primary, 258. scholars chiefly find employment in Government service and on railways.

The backward state of education among Muhammadans is Muhamnot so marked in these Provinces as in some parts of India. madan At the outset they resented especially the introduction of English education, and the substitution of the vernacular for Persian. The influence of the late Sir Saivid Ahmad Khān. who founded a school at Aligarh in 1875—raised to the status of a college in 1878—has caused great changes in the views held. The proportion of Musalmans to the total scholars in all public educational institutions is about 15 per cent., which is slightly higher than their proportion to the total population (14 per cent.). It must, however, be noticed that Musalmans include 36 per cent, of the urban population, and education is much commoner in towns than in rural areas. In 1881 Musalmans formed 12 per cent. of the students in Arts colleges; they were 17 per cent. in 1891 and 15 per cent.

in 1901. Degrees taken by Muhammadans were 14 per cent of the total in 1891 and 19 per cent. In 1901, and matricula tions 18 and 15 per cent. In general school education Musalmans formed about 21 per cent of the total in secondary schools in both 1891 and 1901, and 15 and 14 per cent, respectively, in primary schools. The objection that the Government schools make no provision for religious instruction is still felt; and this explains the high proportion of Musalmans in private schools, where in 1901 they formed 52 per cent. of the total in advanced schools, and 42 per cent. in elementary schools. Judged by the census results for literacy, Muhammadans made slightly more progress than Hindus between 1891 and 1901. The knowledge of English is more common among Muhammadans than among Hindus.

General

The proportion of the population of a school-going age under instruction has increased from 3-4 per cent. in 1881 to 4.1 per cent, in 1891, 6.1 per cent, in 1901, and 7 per centin 1904. For boys it was 12.9 per cent, and for girls only 0-75 per cent, in the latest year. A considerable impetus was given by the revival in 1895 of the system of aiding indigenous education. Between 1801 and 1001 the proportion under secondary education increased from 1-4 to 1-8 per cent., while the increase under primary education was from 4-1 to 7-1 per cent. The census figures of 1901 showed that 578 males and 24 females out of 10,000 of either sex could read and write, and the proportions had increased in ten years by 9 per cent, for both sexes together, 8 per cent, for males and 30 per " cent. for females. In the Himālayan tract 1,052 males, and in the Central India plateau and eastern plain 706, males out of 10,000 are literate, but in the western plain only 495. religion, 41 per cent. of Christians, 24 per cent. of Aryas, and 22 per cent. of Jains are literate; but in the case of Hindus and Musalmans, who form the bulk of the population, the proportion sinks to 3 and 2.8 per cent. The caste system is responsible to some extent for the backwardness of education. Nearly one-quarter of the total number of Hindus are considered so impure that a member of a higher caste after contact with them is required to bathe. Though the schools are open to all, the admission of a boy belonging to one of these impure castes would be resented. Among the middleclass castes, forming 40 per cent. of the total, education is commonly regarded as a useless luxury. In the case of female education one of the chief difficulties is the paucity of female teachers. The labours of the various missionary bodies have

been especially valuable in the case of female education and the education of the lowest castes. Two principal characters for writing are in use in the Provinces, the Persian and the Nagari, the latter having many local varieties in a cursive form. Out of every ten literate Hindus nine can read and write Nāgari only, or one of its cursive forms, while among Musalmans six out of seven know the Persian alphabet only.

The main statistics of educational finance for 1903-4 are Finance. shown below. The monthly fees in Government schools vary from 2 to 12 annas in the primary sections to R. 1 to Rs. 2 in the middle sections, and Rs. 2½ to Rs. 3 in high schools. In aided schools the fees must be at least 75 per cent. of those fixed for Government schools. Collegiate fees range from Rs. 8 to Rs. 12 a month.

In 1845, when efforts to spread education were commencing, Newsthere was only one native paper in the Provinces not printed papers. in English, and that was in Persian. By 1881 there were 69, and the number rose to 101 in 1891 and 119 in 1901. Of the papers appearing in 1901, 3 were dailies and 3 more were published twice or thrice a week; 11 were in English and 103 in the vernacular (69 in Persian and 34 in Nagari characters). The total circulation of the vernacular papers exceeds 40,000. The papers with the largest circulations are: the Rajput (fortnightly), which is chiefly occupied with the condition of Raiputs; the Bharat Jawan (weekly), a Hindu paper of moderate tone in politics; the

Sanātan Dharm Patākā (monthly), which supports the orthodox Hindu religion against the Arya Samāj; Jāsus (monthly), chiefly concerned with police cases; Kānyakuhi Hitkari (monthly), which promotes reforms among Kanyakubi The principal political organs in (Kanaujiā) Brahmans. English are: the Advocate (twice a week) and the Kavastha Samāchār (now Hindustan Review) (monthly), both of which are strong supporters of the Congress; in vernacular Al Bashar (weekly), which is strongly Muhammadan; Hindustāni (weekly), a reproduction of the Advocate; Outh Akhbar (daily), a moderate paper which opposes the Congress; Outle Samāchar (weekly), a moderate paper. Taken as a whole the tone of the Press is satisfactory. Government is keenlycriticized, often without a due knowledge of the facts. The leading castes, the Arva Samāi, and the talukdūrs of Oudh all have their own organs. About one-third of the number of papers published in 1901 were in the Muhammadan interest. The Pioneer is the chief Anglo-Indian organ.

Registered publications.

The total number of publications (books, &c.) registered was 959 in 1891 and 1,449 in 1901. The most striking feature about these figures is the large increase in original works from 723 to 1,300, and the decrease in republications from 104 to 6, and in translations from 132 to 44. Classifying the books by subjects, it appears that in 1901 educational works, which are chiefly school-books, numbered 360, or one-quarter of the total, while in 1891 they had been only-87, or one-eleventh. Books on religious subjects have decreased from 306 to 238, while poetical works have increased from 70 to 266. Novels have risen from 65 to 104. 1901 the other principal classes of books were History, 77 (59 educational); Language, 196 (178 educational); Philosophy, 44; and Miscellaneous, 387 (73 educational). The headings Arts, Biography, Drama, Voyages and Travels included only 54 books, while out of 30 books on scientific subjects 28 were educational.

Hospitals and dispensaries. The Medical department is in charge of an Inspector-General of Civil Hospitals. Every District but Almora is in charge of a Civil Surgeon, with an Assistant in a few of the larger stations. Medical officers in military employ also hold collateral civil charge at Almora and Rankhet. There are eighty-three Assistant Surgeons in charge of the more important dispensaries, and a large number of Hospital Assistants. The important statistics of medical work are given in the table on pages 159 and 160. The number of hospitals and dispensaries

has risen from 212 in 1881 to 299 in 1891, 485 in 1901, and 500 in 1903. The increase between 1801 and 1901 was largely due to the inclusion in the returns of more than 100 police, railway, forest, and private dispensaries. The total income in 1903 was 9.4 lakhs, less than half of which came from Provincial revenues, while Local funds contributed 2.5 lakhs, and the income from fees, subscriptions, and endowments was 2.8 lakhs. Expenditure amounted to 8.6 lakhs. The number of beds available was 2,737 for male patients and 1,492 for females, of which goo were in hospitals and dispensaries exclusively for females. The largest number of beds in any single hospital is 151 at Bareilly. The best-equipped hospitals for native patients are the Thomason Hospital at Agra and the Balrampur Hospital at Lucknow. The Ramsay Hospital for Europeans, opened at Nainī Tāl in 1892, cost more than 21/2 lakhs, about half of which was provided from Government funds. The number of visits paid by lady doctors and female hospital assistants to women at their homes in the bazars in 1903 was about 3,800, and more than 300 of these were visits made to native ladies of the parda-nashīn class.

There are four lunatic asylums—at Bareilly, Lucknow, Agra, Lunatics. and Benares—with 1,148 inmates in 1903, of whom 281 were criminal lunatics. Out of 327 cases in 1903, the principal causes of insanity were alleged to be charas- and gānja-smoking 51, spirit-drinking 13, fever 28, epilepsy 23, heredity 17, exposure and injury to brain 14, moral causes 46, and unknown 108.

Inoculation by indigenous methods is not common, but is Vaccinaoccasionally practised by the Māli or gardener caste, which is tion.
believed to have special influence over small-pox. The
statistics of vaccination are shown on page 160. A dépôt for
the supply of calf-lymph has been established near Nainī Tāl.
Small-pox epidemics have decreased considerably with the
spread of vaccination.

The system of selling quinine in pice packets was first intro-Sale of duced in 1895. The packets are now prepared in the Alīgarh quinine. jail, and in 1903 the amount realized was Rs. 3,099, representing nearly 200,000 packets of 5-grain doses.

The (United Provinces) Village Sanitation Act of 1892 pro-Village vides for inquiries being made into the sufficiency and purity sanitation of the water-supply in villages with a population of not less than 2,000. It was applied experimentally in eight Districts in 1894 and to the whole Provinces in 1896. Part of the funds required may be supplied by District boards, and grants

have also been made by Government; but owing to the prejudices of the people progress is slow. The Act also provides for necessary action being taken in villages in the case of epidemics, and for elementary conservancy.

Surveys.

The Great Trigonometrical Survey of India, begun by Colonel Lambton in 1802, was extended over the North-Western Provinces¹ chiefly between 1843 and 1850, and forms the eventual basis on which all modern surveys are made. Before 1823 such other professional surveys as existed were merely of the nature of military reconnaissances. In 1823 the professional survey was begun. Its work consisted in the preparation of maps on the scale of 4 inches to the mile, based on theodolite traverses, and showing the boundaries and sites of villages and all topographical features. Practically the whole of the Provinces were surveyed in this manner, but the records of several Districts were lost during the Mutiny.

Up to 1871 cadastral surveys were carried out by the Settlement officers in Districts under settlement. The maps at first were mere eye sketches, showing roughly the position and shape of each field; but in 1852 the introduction of the planetable resulted in a marked improvement. Amins were the usual agency employed, but occasionally the work was done by the patwāris with considerable success.

The scale was 16 inches to the mile, or more usually some nearly equivalent scale of the local unit of measurement. These surveys not being based on scientific data, the areas were unreliable, and the compilation of maps of areas larger than a village was difficult and unsatisfactory. After 1871 the two systems of revenue survey were amalgamated, and cadastral surveys on the 16-inch scale, based on theodolite traverses, were carried out by professional survey parties. In the earlier surveys under this system, in addition to the maps, the survey parties were responsible for the entries in certain of the fieldbook columns, and in Districts surveyed later they were associated with the Settlement department in the preparation of other portions of the records-of-rights as well. The tracts professionally surveyed between 1871 and 1894 were the Districts of Agra, Muttra, Banda, Hamirpur, and Moradabad, the permanently settled areas in Benares, Mirzāpur, Ghāzīpur, Jaunpur, and Ballia, and the Districts of Dehra Dun, Gorakhpur, Rasti, Jbānsi (excluding Lalitpur), and Garhwāl: In 1894 survey by amins was replaced by the system of survey by palwari agency. Under this system, in Districts under survey,

<sup>1</sup> Now the Province of Agra.

after the professional traverse operations have been completed, each patwari undergoes a course of instruction, and then under the supervision of a survey officer assisted by a small professional staff surveys the villages of his circle and prepares for each a complete preliminary record-of-rights, which is afterwards attested by a Settlement official before assessment. An officer of the Survey of India is in professional charge of the several survey establishments; the methods of survey and check survey are those of the Survey of India, and the Deputy-Surveyor-General is empowered to inspect the work. After settlement the patwaris who have been trained are, with the exception of a small minority who fail to qualify, competent to maintain the new maps and records under the supervision of the kānungos, a number of whom are also trained during the survey operations. The Districts where new maps and records have been prepared by patwāri agency since 1894 are Thānsi (Lalitpur subdivision), Meerut, Bahraich, Kheri, Shahjahanpur, Bareilly, Pīlībhīt, Gondā, Farrukhābād, Etah, and portions of Sītāpur, Bijnor, Nainī Tāl, Etāwah, and Alīgarh.

In addition to the surveys mentioned, the following areas have been surveyed topographically by the Survey of India: between 1840 and 1870, Sahāranpur, Muzaffarnagar, Meerut, Bulandshahr, Alīgarh, and some parts of Mirzāpur, on the 2-inch scale; between 1851 and 1853, the Native State of Tehrī on the 1/4 inch scale; Dehra Dūn and the Siwāliks, partly on the 4-inch and partly on the 2-inch scales between 1873 and 1876; and Kumaun and Garhwāl on the 1-inch scale in 1886-8.

## RIVERS, MOUNTAINS, LAKES, CANALS, AND HISTORIC AREAS

Ganges (Gangā).—The great river of Northern India which In the carries off the drainage of the Southern Himālayas, and also United Provinces, a smaller volume received from the northern and eastern slopes of the Vindhyas. It rises in the Tehrī State, in 30° 55' N. and 70° 7' E., where it issues under the name of Bhagirathi from an ice cave at the foot of a Himalayan snow-bed near Gangotri, 13,800 feet above the level of the sea. During its earlier course it receives the Jahnavi from the north-west, and subsequently the Alaknanda, after which the united stream is called Ganges. It pierces the Himālayas at Sukhī, and turns south-west to Hardwar. From this point it flows south and south-east between the Meerut and Rohilkhand Divisions of the United Provinces, and then separates the latter from the Agra Division, and flows through the eastern part of Farrukhābād District. It next forms the south-western boundary of Oudh, and then crosses the Districts of Allahabad, Mirzapur, Benares, and Ghāzīpur, after which it divides the Districts of Ghazipur and Ballia from Bengal. The Ganges is a considerable river even at Hardwar, where the Upper Ganges CANAL starts, and it is tapped again at Naraura for the Lower GANGES CANAL. It thus supplies the largest irrigation works in the United Provinces, and is also the source of the watersupply of the cities of Meerut (by a canal), Cawnpore, and Benares. Its chief tributaries are: the Ranganga (Farrukhābād), Jumna and Tons (Allahābād), Gumtī (Ghāzīpur), and GOGRA (Ballia), while smaller affluents are the Malin (Bijnor). Bürhgangā (Mecrut), Mahāwa (Budaun), Sot or Yār-i-Wafādār (Shāhjahānpur), Būrhgangā and Kālī Nadī (Farrukhābād), Isan (Cawnpore), Pandu (Fatehpur), Jirgo (Mirzapur), Barna (Benares), Găngī and Besū (Ghāzīpur), and Chhotī Sarjū (Balliā), which is called the Tons in its upper portion. The principal towns on or near its banks in the United Provinces are: Srīnagar (on the Alaknanda), Hardwar, Garbmuktesar, Anupshahr, Soron, Farrukhābād (now left some miles away), Kanauj, Bilhaur, Bithur, Cawnpore, Dalmau, Mānikpur, Karā, Allahābād, Sirsā, Mirzāpur, Chunār, Benares, Ghāzīpur, and Balliā.

In Bengal.

Impinging on the Shahabad District of Bengal, in ase at N. and 83° 52' E., the Ganges forms the boundary of this District, separating it from the United Provinces, till it receives as a tributary the Gogra on the north bank. It shortly afterwards receives another important tributary, the Son, from the south, then passes Patna, and obtains another accession to its volume from the GANDAR, which rises in Nepal. Farther to the east, it receives the Kosī, and then, skirting the Rajmahāl Hills, turns sharply to the south, passing near the site of the ruined city of Gaur. About 20 miles further on, the Ganges begins to branch out over the level country; and this spot marks the commencement of its delta, being 220 miles in a straight line, or nearly 300 by the windings of the river, from the Bay of Bengal. The present main channel, assuming the name of the PADMA, proceeds in a south-casterly direction past Pābna to Goalundo, where it is joined by the Jamana, the main stream of the BRAHMAPUTRA. The bed is here several miles wide, and the river is split up into several channuls, flowing between constantly shifting sandbanks and islands. During the rains the current is very strong, and even steamers find difficulty in making headway against it. This vast confluence of water rushes towards the sea, joining the great Megana estuary in 23° 13' N. and 90° 33' E., after the Ganges lus had a course of 540 miles in Bengal, and 1,557 miles from its SOURCE.

The Delta.

The Meghnä estuary, however, is only the largest and most easterly of a great number of Gunges mouths, among which may be mentioned the Floodily, Matla, Raimangal, Malancha, and HARINGHATA. The most westerly and the most important for navigation is the Hooghly, on which stands Calcutta-This receives the water of the three westernmost distributory channels that start from the parent Ganges in Murchidebald District (generally known as the Nadia Rivers, one of which takes again the name of the Bhagirathi), and it is to this exit that the sanctity of the river clings. Between the Hooghly on the west and the Meghna on the east lies the Ganges delta. The upper angle of this consists of the Districts of Murshidabad, Nadia, Jessore, and the Twenty-four Parganas. These Districts have for the most part been raised above the level of periodical inundation by the silt deposits of the-Ganges and its offshoots; and deltaic conditions now exist' only in the eastern Districts of Khuloa, Faridpur, and Backergunge, and towards the southern base of the delta, where the country sinks into a series of great swamps, intersected by

163

a network of innumerable channels, and known as the Sun-

In its course through Bengal, the Ganges rolls majestically down to the sea in a bountiful stream, which never becomes a merely destructive torrent in the rains and never dwindles away in the hottest summer. Embankments are seldom required to restrain its inundations, for the alluvial silt which it spills over its banks, year by year, affords to the fields a top-dressing of inexhaustible fertility. If one crop be drowned by the flood, the cultivator calculates that his second crop will abundantly requite him. In Eastern Bengal, in fact, the periodic inundations of the Ganges and its distributaries render the country immune from the results of a scanty rainfall and make artificial irrigation unnecessary.

Until some 400 years ago the course of the Ganges, after entering Bengal proper, was by the channel of the Bhagirathi and Hooghly as far as the modern Calcutta, whence it branched south-eastwards to the sea, down what is still known as the Adi Ganga, which corresponds for part of its course with TOLLY'S NULLAH. By degrees this channel silted up and became unequal to its task, and the main stream of the Ganges was thus obliged to seek another outlet. In this way the ICHĀMATĪ, the JALANGĪ, and the MĀTĀBHĀNGA became in turn the main stream. The river tended ever to the east; and at last, aided perhaps by one of the periodic subsidences of the unstable surface of the country, it broke eastwards right across the old drainage channels, until it was met and stopped by the Brahmaputra. Great changes still take place from time to time in the river-bed, and alter the face of the country. Extensive islands are thrown up and attach themselves to the bank; while the river deserts its old bed and seeks a new channel, it may be, many miles off. Such changes are so rapid and on so vast a scale, and the eroding power of the current upon the bank is so irresistible, that it is considered perilous to build any structure of a large or permanent character on the margin.

The junction of two or more rivers, called Prayāg, is usually Sacred considered sacred; but that of the Ganges and Jumna at places. Allahābād, where according to popular belief a third river, the Saraswatī, which sinks into the sands at Bhatner in Rājputāna, reappears from its subterranean course, is one of the most holy places in India. Here, on the spit of land below the fort, a large bathing festival is held annually in the month of Māgh (January). Every twelve years the fair is called the kumbh melā, as it is held when Jupiter is in Aquarius (kumbh) and

the sun in Aries, and the efficacy of hathing is increased, large numbers of pilgrims from every part of India flocking to the junction. At the *kumbli melā* in 1894 the attendance was estimated at a million to a million and a half.

The holiest places upon the banks of the Ganges in Bengal are Sonpur at its confluence with the Gandak, and Sagar Island at the mouth of the Hooghly. Both places are the scene of annual bathing festivals, which are frequented by thousands of pilgrims from all parts of India. Even at the present day, the six years' pilgrimage from the source of the Ganges to its mouth, and back again, known as pradakshina, is performed by many; and a few fanatical devotees may be seen wearily accomplishing this meritorious penance by measuring their length.

Most rivers in India have sanctity attached to them, but the Ganges is especially sacred. Its importance in Vedic literature is slight, but in the epics and Puranas it receives much attention. Sagar, the thirty-eighth king of the Solar Dynasty, had performed the great horse-sacrifice (Asvamedha) ninety-nine times. In this ceremony the horse wandered over the world, unhaltered and never guided or driven, Every country it entered was conquered by the following army, and on its return it was sacrificed to the gods. When Sagar drove out a horse for the hundredth time, the god Indra stole it and tied it up in Patal (the under-world) near the place where a sage, Kapila Muni, was meditating. Sugar had two wives, one of whom bore Asmanjas, and the other had sixty thousand sons who were following the horse. The sons found it, and believing Kapila to be the thief abused him, and were consumed to ashes in consequence of the sage's curse. Ansman, son of Asmanjas, had gone in search of his uncles, and finding the horse took it home. Garuda, the mythical half-man, half-bird, king of the snakes, told him that the sin of those who had abused Kapila could best be removed by bringing to earth the Ganges, which then flowed in heaven (Brahmā Lok). spite of much prayer and the practice of austerities by Ansman and his son, Dalip, this could not be brought about; but-Bhagirath, son of Dalip, persuaded Brahma to grant him a boon, and he chose the long-sought permission to allow the Ganges to flow on this world. Brahma ngreed, but told Bhagirath that the earth could not sustain the shock, and advised him to consult Siva, who consented to break the force of the river by allowing it to fall on his head. The ice-cavern' beneath the glacier, from which the stream descends, is repre-

sented as the tangled hair of Siva. One branch, the Mandakini, still flows through Brahma Lok; a second, which passes through Patal, washed away the sin of the sixty thousand; and the third branch is the Ganges1. Besides the places which have already been referred to, Gangotri, near the source, Devapraying, Garhmuktesar, Soron, Dalmau, and Benares are the principal bathing resorts. The sanctity of the river still exists everywhere, though according to prophecy it should have passed away to the Narbada a few years ago. Dying persons are taken to expire on its banks, corpses are carried to be burned there, and the ashes of the dead are brought from long distances to be thrown into its holy stream, in the hope of attaining cternal bliss for the deceased. About the time of the regular festivals the roads to the river are crowded with pilgrims, who keep up an incessant cry of salutation to the great goddess (Gango ji ki jai). On their return they carry away bottles of the sacred water to their less fortunate relations.

Till within the last forty years of the nineteenth century, after Traffic. which the extension of railways provided a quicker means of transport, the magnificent stream of the Ganges formed almost the sole channel of traffic between Upper India and the seaboard, and high masonry landing-places for steamers still exist at Allahābād and other places lower down, though they are no longer used. The products of the Gangetic plain, and the cotton of the Central Provinces and Central India, used formerly to be conveyed by this route to Calcutta. At present it is chiefly used for the carriage of wood and grain in many parts of its course, and also of oilseeds, saltpetre, stone, and sugar in the eastern portion of the United Provinces. The principal import to these Provinces is rice, but manufactured goods and metals are also carried in considerable quantities. The canal dam at Naraura in Bulandshahr District has stopped through traffic between the upper and lower courses of the Ganges.

In Bengal, however, the Ganges may yet rank as one of the most-frequented waterways in the world. The downward traffic is most brisk in the rainy season, when the river comes down in flood. During the rest of the year the boats make their way back up stream, often without cargoes, either helped by a favourable wind or laboriously towed along the bank. The most important traffic in Bengal is in food-grains and oilseeds; and, though no complete statistics are available, it appears probable that the actual amount of traffic on the Ganges by

A variant of the legend represents the ashes of the sixty thousand as having been purified by the BHEGIRATH, a branch of the Gauges.

native craft has not at all diminished since the opening of the railway, to which the river is not only a rival, but a feeder. Railway stations situated on the banks form centres of collection and distribution for the surrounding country, and fishing villages like Goalundo have by this means been raised into river marts of the first magnitude. Steamer services ply along its whole course within Bengal, and many towns lie on its banks, the most important being Patna and Monghyr.

Six 1ailway bridges cross the Ganges: near Roorkee, at Garhmuktesar (2,332 feet), Rājghāt. Cawnpore (2,900 feet), and Benares (3,518 feet), while the sixth, measuring 3,000 feet, was completed near Allahābād in 1905. There is no bridge below Benares, though the construction of a railway bridge near Sāraghāt in Bengal is contemplated. The normal flood discharge varies from 207,000 cubic feet per second at Hardwār, where the bed is steep and only 2,500 feet wide, to 300,000 at Garhmuktesar and 150,000 at Naraura (width at canal weir and about a mile above it 3,880 feet). The bridge at Allahābād is designed to allow the discharge of a million cubic feet per second. The normal flood-level falls from 942 feet above the sea at Hardwār to 287 at Allahābād.

Solāni.—A river of the United Provinces, which rises in the Siwālik Hills (30° 13' N., 77° 59' E.) from the highest point of the Mohan pass, flows south and south-east through Sahāranpur District, and then winds through a corner of Muzaffarnagar, joining the Ganges after a course of about 55 miles. The upper part of the river and most of its tributaries are mere water-courses, almost dry except during the rains, when they carry off the drainage of the Siwāliks in rushing torrents. Near Roorkee a magnificent aqueduct of brick, with fifteen arches, each 50 feet wide, conveys the water of the Upper Ganges Canal at a height of 24 feet above the bed-of this river. The Solāni has done much damage by floods and changes in its course. In Muzaffarnagar this was intensified by percolation from the Ganges Canal, but drainage cuts have improved the tract.

Rāmgangā, West (also known as Ruhut or Ruput in its upper courses).—A river of the United Provinces, which rises in Garhwāl District (30° 5′ N., 79° rz' E.) in the hills some distance south of the snowy range of the Himālayas. It flows for about ninety miles with a very rapid fall, first through Garhwāl, then through Kumaun, and after again entering Garhwāl debouches on the plains near the Kālāgarh fort, south of the peak of the same name, in Bijnor District. It is now a large

of wet seasons caused the land in the valley to deteriorate so much that large reductions of assessment were made. This tract has now recovered to a large extent.

Gumti (Gonati; possibly the Sambos of Arrian).-A river of the United Provinces, which rises (28° 35' N., 80° 7' E.) nearly 20 miles east of Pilibhit. For about twelve miles the river-bed is a mere depression, which dries up in the hot A small stream, the Gaihai, then joins it, and a shallow channel is formed, while after it has received the Toknai (thirty-five miles from its source) it runs in a perennial stream. A few miles farther down the Pawayan steam tramway crosses by a bridge 250 feet long, and the Shāhjahānpur-Kherī road by a bridge 210 feet long. The Gumti then flows sluggishly through Shahjahanpur and Kheri, with a winding course and a network of channels, choked with weeds and aquatic plants. Below Muhamdi it changes its character, and has a well-defined channel roc to 200 feet wide, with banks increasing in height to 60 feet at Lucknow, 180 miles from its source. Two considerable affluents, the Kathna (90 miles long) and Sarayan (120 miles), join the Gumti in Sitapur. At Lucknow it is crossed by two railway bridges, and one stone, one brick, and two iron road-bridges. From Lucknow its course winds much through Bara Banki, Sultanpur, and Jaunpur Districts, the distance by river from Lucknow to Jaunpur being almost double the distance in a direct line. The breadth of the river increases from 120 to 200 feet in Lucknow and Bara Banki to 200 to 400 in Sultanpur, and 400 to 600 in Jampur. At Jampur It is crossed by a magnificent stone bridge, 654 feet long, built at the end of the sixteenth century, and also by a railway bridge. The Sai, a large river which runs parallel to the Gumil for over 350 miles, joins it below Jaunpur. From this point the river flows through the Districts of Jaunpur and Benares and joins the Ganges at Saidpur in Ghazipur District, after a total course of nearly 500 miles.

The Gumti with its tributaries drains about 7,500 square miles, and is especially liable to severe floods, causing much damage. A careful survey of the river was made after the flood of 1894. It then appeared that the floods are entirely due to excessive rainfall in the catchment area, and not to spill from other rivers. At Lucknow the fall is only nine inches per mile, and at Jaunpur only six inches, so that flood-water cannot be carried off fast enough. After heavy rain in September, 1894, the river rose at Lucknow to a height of 22 feet above the ordinary low-water level. There is a tradition that in 1774

the Gumtī rose so high at Jaunpur that boats sailed over the bridge, the parapet of which is 27 feet above low-water level. In 1871 the water rose there to a height of 9 feet above the parapet; 4,000 houses were destroyed in the city, and nearly 9,000 in the villages of the District. In September, 1894, the tiver again rose 27 feet above low-water level, and 1,378 houses in the city were partly or completely destroyed. The Gumtī is navigable as high as Muhamdī, but traffic is not very considerable. Grain, fuel, and thatching-grass are carried down stream, and stone is taken up. It is not used for irrigation.

Sal.—A river of the United Provinces, rising in Hardoī District between the Gumtī and Ganges (27° 46′ N., 80° 9′ E.). It flows in a tortuous south-easterly direction through the Oudh Districts of Unao, Rāe Barelī, and Partābgarh, and enters the Province of Agra in Jaunpur District, falling into the Gumtī ten miles below Jaunpur city after a course of over 350 miles. In the rains small boats can pass up as high as Rāe Barelī. The drainage falling into the Sai is chiefly from the north, and its bed is usually too deep to afford irrigation.

Tons, Southern (Tamasa).—A river of Central India, rising in the Kaimur range in Maihar State (24° N., 80° 9' E.). Its nominal source is the Tamasa Kund, a tank on the Kaimur Hills, 2,000 feet above sea-level. From this point the river follows a general north-easterly course for about 120 miles, and, after traversing the rough billy country round Maihar, flows through the level fertile country of Rewah. Here it is joined by the Satna; and 40 miles lower down it reaches the edge of the plateau at Purwa, where, with its affluents the Bihar and Chachaia, it forms a magnificent series of waterfalls. greatest fall is that of the Bihar, which dashes over the precipice in a great sheet of water, 600 feet broad and 370 high. fall of the Tons itself has a descent of about 200 feet. Tons then flows through a level plain, spreading into a wide stream with long deep reaches, and enters the United Provinces at Deora in Allahābād District. After a north-easterly course of about 44 miles, it falls into the Ganges 10 miles below the junction of the latter with the Jumna, its total length being 165 miles. The principal tributary is the Belan, which rises in Mirzāpur and drains the central plateau of that District. After a picturesque westerly course of 95 miles, including a waterfall 100 feet in height, the Belan enters Allahabad and traverses that District and Rewah State for 40 miles, joining the Tons where it crosses the border between Rewah and Allahabad. A bridge, 1,206 feet long with seven spans, carries the East Indian

Railway over the Tons near its junction with the Ganges: Navigation by boats of any size is confined to the lower reaches; floods rise as high as 25 feet in a few hours, and the highest recorded rise has been 65 feet.

Banganga.—An old bed of the Ganges in Benares and Ghazipur Districts, United Provinces.

Tons, Eastern (also called Chhoti Sarjū).—A river draining, the east of the United Provinces between the Gogra and Guatī. It rises in the west of Fyzābād, and runs nearly parallel with the Gogra. After entering Azamgarh it llows with a tortuous course south-east past Azamgarh town, and receives the Chhoti Sarjū, a branch from the Gogra, near Mau. The combined stream, now known as the Chhoti Sarjū, flows still south-east into Balliā, joining the Ganges two miles west of Balliā town. The Tons is remarkable for its disastrous floods, caused by the inability of the channel to carry off excessive rainfall. In 1871, 1894, and 1903, Azamgarh Town was damaged in this way.

[Report on the River Tons Floods in October, 1894, by A. B. Gale.]

Karamnāsā (Karamnāshā, 'the destroyer of religious merit; 'the Kommenases of Arrian).-A river of Northern India, rising near Sărodāg in the Kaimur Hills (24° 32' N., 83° 26' E.), 18 miles west of Rohtasgarh in Bengal. It first flows north-west, and near Darihārā begins to form the boundary between the Districts of Shahabad (Bengal) and Mirzapur (United Provinces). It then flows north for about 15 miles across Mirzāpur, after which it turns north-east and separates Shāhābād from Benarcs and Ghāzīpur, until it falls into the GANGES near Chausa, after a total course of about 146 miles. Its tributaries are the Durgauti and Dharmauti, two small streams on the right bank. In the hills, the bed of the Karamnāsā is rocky and its banks abrupt; but as it debouches upon the plains, it sinks deeply into a rich clay, very recentive of moisture. During the rains small boats can ply as high as its confluence with the Durgauti. There are two falls, called Deo Dharf and Chhanpathar, which attract attention from their height and beauty.

Two legends account for the ill repute of the river. One tells how Rājā Trisanka of the Solar race had killed a Brāhman and contracted an incestuous marriage. He was purged from these sins by a saint who collected water from all the sacred streams of the world and washed him. The bath took place at the spot where the river issues, and this bears for ever the

RIVERS 17t

taint of his guilt. The other legend makes Trisanka attempt to ascend into heaven by means of long austerities. Half-way he was suspended head downwards by the gods, and a poisonous moisture exudes from his mouth into the river. The real cause of its ill fame is probably the fact that the Karamnāsā was the boundary of the eastern kingdom of Magadha, which is treated with contempt in Sanskrit literature because its inhabitants were not Aryans. Hindus living on its banks, except those of the highest castes, are not defiled by it, and carry more scrupulous travellers over it for a consideration. There is no regular irrigation from the Karamnāsā.

Son (Sanskrit, Suvarna or 'gold'; likewise called Hiranya-l'āha or Hiranya-l'āha; the Sonos of Arrian; also identified with the Erannoboas of Arrian).—A large river of Northern India, which, flowing from the Amarkantak highlands (22° 42' N., 82° 4' E.), first north and then east, joins the GANGES to miles above Dinapore, after a course of about 487 miles.

The Son rises near the Narbadā at Amarkantak in the Maikala range, the hill on which its nominal source is located being called Sonbhadra or more commonly Sonmundā. It possesses great sanctity, the performance of sandhyā on its banks ensuring absolution and the attainment of heaven even to the slayer of a Brāhman. Legends about the stream are numerous, one of the most picturesque assigning the origin of the Son and Narbadā to two tears dropped by Brahmā, one on either side of the Amarkantak range. The Son is frequently mentioned in Hindu literature—in the Rāmāyanas of Vālmīki and Tulsī Dās, the Bhagwat, and other works.

Soon after leaving its source, the Son falls in a cascade over the edge of the Amarkantak plateau amid the most picturesque surroundings, and flows through Bilaspur District of the Central Provinces till it enters the Rewah State at 23° 6' N, and 81° 59′ E. From this point till it leaves the Central India Agency after a course of 288 miles, the stream flows through a maze of valley and hill, for the most part in a narrow rocky channel, but expanding in favourable spots into magnificent deep broad reaches locally called dahār, the favourite resorts of the fisher caste. Following at first a northerly course, near its junction with the Mahanadi river at Sarsi it meets the scarp of the Kaimur Hills and is turned into a north-easterly direction, finally leaving the Agency 5 miles east of Deora village. In Central India three affluents of importance are received: one on the left bank, the Johilla, which likewise rises at Amarkantak and joins it at Barwalū village; and two which join it on the right bank, the Banas at 23° 17′ N. and 81° 31′ E., and the Gopat near Bardt. In the United Provinces the Son flows for about 55 miles from west to east across Mirzāpur District, in a deep valley never more than 8 or 9 miles broad, often narrowing to a gorge, and receives from the south two tributaries, the Rihand and Kanhar. During the dry season it is shallow but rapid, varying in breadth from 60 to 100 yards, and is easily fordable. The Son enters Rengal in 24° 31′ N. and 83° 24′ E., and flows in a north-westerly direction, separating the District of Shāhābād from Palāmau, Gayā, and Patna, till, after a course within Bengal of 144 miles, it falls into the Ganges in 25° 40′ N. and 84° 59′ E.

So far as regards navigation, the Son is mainly used for floating down large rafts of bamboos and a little timber. During the rainy season, native boats of large tonnage occasionally proceed for a short distance up stream; but navigation is then rendered dangerous by the extraordinary violence of the flood, and throughout the rest of the year becomes impossible, owing to the small depth of water. The irrigation system in South Bibar known as the Son Canals is served by this river, the water being distributed west to Shahabad and east to Gaya and Patna from a dam constructed at DEHRI. In the lower portion of its course the Son is marked by several striking characteristics. Its bed is enormously wide, in some places stretching for three miles from bank to bank. During the greater part of the year this broad channel is merely a waste of drifting sand, with an insignificant stream that is nearly everywhere fordable. The discharge of water at this time is estimated to fall as low as 620 cubic feet per second. But in the rainy season, and especially just after a storm has burst on the plateau of Central India, the river rises with incredible rapidity. The entire rainfall of an area of about 21,300 square miles requires to find an outlet by this channel, which frequently proves unable to carry off the total flood discharge, calculated at \$30,000 cubic feet per second. These heavy floods are of short duration, seldom lasting for more than four days; but in recent years they have wrought much destruction in the low-lying plains of Shahabad. Near the site of the great dam at Dehri the Son is crossed by the grand trunk road on a stone causeway; and lower down. near Koelwar, the East Indian Railway has been carried across on a lattice-girder bridge. This bridge, begun for a single line of rails in 1855, and finally completed for a double line in 1870; has a total length of 4,199 feet from back to back of the abutments,

RIVERS 173

The Son possesses historical interest as being probably identical with the Erannobeas of Greek geographers, which is thought to be a corruption of Hiranya-Vāhu, or 'the goldenarmed' (a title of Siva), a name which the Son anciently bore. The old town of Pālibothrā or Pātaliputra, corresponding to the modern Patra, was situated at the confluence of the Erannobeas and the Ganges; and, in addition, we know that the junction of the Son with the Ganges has been gradually receding westwards. Old channels of the Son have been found between Bankipore and Dinapore, and even below the present site of Patra. In the Bengal Atlas of 1772 the junction is marked near Maner, and it would seem to have been at the same spot in the seventeenth century; it is now about ten miles higher up the Ganges.

Jumna (Yamuna; the Diamouna of Ptolemy, Jomanes of Pliny, and Jobares of Arrian).-A great river of Northern India. Rising in the Tchtī State (31° 1' N., 78° 27' E.), eight miles west of the lofty mountain Bandarpunch (20,731 feet), it flows past the sacred shrine of Jamnotri, and winds through the Outer Himālayas for eighty miles, receiving a few small streams. the point where it passes into the Dun, the valley between the Himālavas and the Siwāliks, it receives the Tons, which is there the larger stream. Its course now runs south-west for 22 miles, dividing the Kiarda Dun (Punjab) from Dehra Dun (United Provinces); two large affluents, the Giri from Sirmur on the west and the Asan from Dehra on the east, join it here. The Jumna pierces the Siwāliks 95 miles from its source, at Khārā, and divides Ambāla and Karnāl Districts in the Punjab from Sahāranpur and Muzaffarnagar in the United It is a large river at Faizābād, where it gives off Provinces. the Western and Eastern Junna Canals. Near Bidhault in Muzaffarnagar it turns due south, and runs in that direction for 80 miles, dividing Meerut District from the Punjab, till it reaches Delhi. Ten miles below Delhi it gives off the AGRA CANAL from its western bank at Okhla. It then turns southeast for 27 miles to Dankaur, when it again resumes a southerly course. In this portion it receives on the east the Kotha Nadi and the Hindan, and on the west the Sabi Nadi. Below Delhi the river forms the boundary between Gurgaon District in the Punjab and Bulandshahr and Aligarh Districts in the United Provinces. It then enters Muttra and, crossing it, turns east till the borders of Agra are reached. Throughout its course in this District, where it receives the Banganga, also in Etawah, it winds in a remarkable manner, its bed

lying deep between high banks which are furrowed by sterp ravines. Just before Jalaun District is reached the great river Chambal from Rajputana joins it, and the Jumpa then divides the three Districts of Cawnpore, Fatehpur, and Allahabad from Jalaun, Hamirpur, and Banda. In Cawnpore District the Sengar, and in Fatehpur the Non and Rind, flow into it; close to Hamirpur it receives the Betwa, and in Banda District the Ken. It finally falls into the Ganges below Allahabad, 860 miles from its source.

The Jumna, after issuing from the hills, has a longer course in the United Provinces than the Ganges; but it is not so large or important a stream, and does not carry as much water as is required by the canals taken from it. The supply is therefore increased from the Ganges by means of the cut into the HINDAN; and the Irrigation Commission (1901) recently proposed to make more water from the Ganges available by increasing the supply of the Lower Ganges Canal through a cut from the Sarpa. The Jumna supplies drinking-water to the acities of Agra and Allahabad, which possesses, when fresh, special virtue in destroying the enteric microbe. It is crossed by railway bridges near Sarsawā in Sahāranpur, at Delhi, Muttra, Agra, Kālpī (2,626 feet in width), and Allahābād (3,230 feet). The breadth of water-surface in the dry season varies from 2,600 feet at Okhla and 1,500 feet at Kalpa to 2,200 feet at Allahābād. The discharge in flood at Okhla is about A1,000. cubic feet per second, but this dwindles away to less than 200 in the dry season. The Jumna drains a total area of about 118,000 square miles.

The traffic on the Jumma was formerly of some importance, and large sums were spent in clearing away reefs of kankar (nodular limestone) and conglomerate in Etāwah District. Before the opening of the East Indian Railway, much cotton grown in Bundelkhand was sent down the river from Kālpī. At present timber is carried down the upper portion, and stone and grain in the lower courses. The principal towns on or near its bank are: Delhi in the Punjab; and Bāghpat, Māt, Brindāban, Muttra, Mahāban, Agra, Pīrozābād, Batesar, Etīwah, Kālpī, Hamīrpur, and Allahābād in the United Provinces.

Tons, Northern.—A river in Tehri State and Dehra Dün District, United Provinces. It rises north of the Jamnotti peaks (31° 5′ N., 78° 31′ E.), a few miles from the sources of the Jumna, and first issues as a stream called Sūpin, 31 feet wide and knee-deep, from a snow-bed 12,784 feet above sealevel. After a westerly course of thirty miles in a series of

cascades, it receives the waters of the Rūpin, a rapid torrent, and from this point the united stream is called Tons. Nineteen miles lower down it is joined by the Pābar, and the river then forms the boundary between Jaunsār-Bāwar in Dehra Dūn District and the Native States of Jubbal and Sirmūr in the Punjab. Its course here is tortuous, but generally southerly; and after receiving the Shalwī, a considerable stream, it joins the Junna, after a total course of 100 miles, at an elevation of 1,686 feet above sea-level. The volume of the Tons at the confluence is greater than that of the Junna, so that it may be regarded as the principal head-water of that river. Its average fall is 110 feet per mile, and it is thus of no use for navigation or irrigation.

Hindan (also called Chhaja in its upper course).—A river of the United Provinces, rising in the southern slopes of the Siwāliks in Sahāranpur District (30° 7' N., 77° 47' E.), and draining the central portions of Sahäranpur, Muzasfarnagar, and Meerut. It flows generally towards the south-west, and falls into the JUMNA after a course of 160 miles, a few miles after entering the north-western corner of Bulandshahr. KĀLĪ NADĪ WEST is the chief tributary. Its water is nowhere used for irrigation, but part of its channel forms an important link between the Ganges and Jumna. Thus water can be passed into the Hindan from the Upper Ganges Canal, and thence, by means of a cut made from a point close to Ghāziābād in 1877, into the Jumna above Okhla, increasing the supply of water for the AGRA CANAL. This cut was made wider in 1884 and further improved in 1901, and is now navigable.

Kālī Nadī, West.—A tributary of the Hindan, about 70 miles long, rising in the Sahāranpur District of the United Provinces (30° N., 77° 45′ E.), 16 miles from the Siwāliks, and flowing south-west and south through Sahāranpur and Muzassarnagar, between the Hindan and the Ganges Canal. Its junction with the Hindan is at the point where the latter river enters Meerut.

Chambal.—A river of Central India and Rājputāna, and one of the chief tributaries of the Jumna. It rises in the Indore State, about 9 miles south-west of Mhow cantonment, in the Janapao hill, 2,019 feet above the sca, in 22° 27′ N. and 75° 31′ E. Thence it flows down the northern slopes of the Vindhyan range, with a northward course generally, through Gwalior, Indore, and Sītāmau, and skirts Jhālawār, entering Rājputāna at Chaurāsgath, 195 miles from its source. It receives many tributaries in Central India, the chief being the

Chambla and the SIPRA, both of which rise in the Vindhyan mountains. In Rajputana the Chambal breaks through a scarp of the Patar plateau, the bed getting narrower and narrower. and after a winding course of 30 miles it receives the Damani at Bhainsrorgarh. Some three miles above the latter place are the well-known cascades or challes, the chief of which has Here whirlpools are formed in an estimated fall of 60 feet. huge caverns, 30 and 40 feet in depth, between some of which there is communication underground. Continuing north-east, the river forms for a short distance the houndary between Bundi and Kotah; and near Kotah city it is a broad sluggish stream, very blue in colour, flowing between magnificent overhanging cliffs and rocks rising sheer out of the water, covered with trees and thick brushwood and famous as game preserves. At the city there is a pontoon bridge, replaced by a ferry during the rains in consequence of the high and sudden floods to which the river is subject. Lower down, the Chambal again forms the boundary between Kotah and Bundi, and on its left bank is the interesting old village of Keshorai Pātan. character of the scenery now alters completely. Above Kotah the neighbouring country is all precipitous rock, with wild glens and gullies and thick tangled overhanging brushwood, while below Patan there are gently sloping banks, occasionally very picturesquely wooded and much intersected by channels. Continuing north-east, the river is joined by the Kali Sind from the south and the Mej from the west, while lower down, where the frontiers of Jaipur, Kotah, and Gwalior meet, the Par-RATI flows into it. The Chambal then forms the boundary between Jaipur, Karauli, and Dholpur on the one side and Gwallor on the other. From Jaipur territory it receives the BANAS, and, flowing under an irregular lofty wall of rock along the whole southern border of Karauli, it emerges into the open country south of Dholpur town. Here it is, during the dry season, a sluggish stream 300 yards wide and 170 feet below the level of the surrounding country; but in the rains it generally rises about 70 feet, and in extreme floods nearly 100 feet above summer level. The breadth then increases to more than 1,000 yards, and the current runs at the rate of 51 miles an hour. The banks are intersected by a labyrinth of ravines, some of which are go feet deep and run back inland for a distauce of three miles. At Raighat, three miles south of Dholpur town on the high road between Agra and Bombay, a bridge of boats is kept up between November and June, while a large ferry-boat plies during the rest of the year. A little to the east of

this ghāt the river is crossed by a fine railway bridge of thirteen spans. After forming the boundary between the State of Gwalior and Agra and Etāwah Districts in the United Provinces, the Chambal crosses the latter, and falls into the Jumna 25 miles south-west of Etāwah town. After the two rivers have united, the crystal current of the Chambal may be distinguished for some distance from the muddy waters of the main stream. The total length of the river is about 650 miles, though the distance from its source to its junction with the Jumna is only 330 miles in a straight line. The Chambal is identified with the Charmwati of Sanskrit writers.

Bāngangā (or Utangan).—A river of Northern India, rising in Jaipur territory near BAIRĀT (27° 24' N. and 76° 10' E.). It flows, generally in an easterly direction, through the States of Jaipur, Bharatpur, and Dholpur, and the District of Agra in the United Provinces, and after a course of about 235 miles joins the Jumna ten miles east of Fatehābād in Agra District.

The word Bāngangā (Vānagangā) means literally 'arrow river.' The story goes that the five Pāndava brothers, on going into hiding at Bairāt (Vairāta), concealed their sacred weapons in a tree, and swore that before using them again they would purify them by washing them in the Ganges. One of the brothers, Arjun, had occasion to use his weapons against the Kurus. The Ganges being far off, he shot an arrow into the ground and immediately a spring of the sacred Ganges water issued, which became the source of the Bāngangā.

Between 1848 and 1856 small irrigation works were made in Agra District and Bharatpur State; but these had the effect of diverting the course of the Banganga, and did so much damage that in 1864 the works in Agra were totally closed, and in 1860 operations were undertaken in Bharatpur to bring back the river to its old course. Near the village of Gopalgarh in the Ramgarh hills, about 25 miles below the source, the waters of the river are impounded by a dam 80 feet in height to form the Ramgarh reservoir, the most important irrigation work in the Jaipur State. This lake when full covers an area of six square miles, and can under exceptional circumstances contain 3.000 million cubic feet of water; but ordinarily about half this quantity, or sufficient to irrigate more than 13,000 acres, is impounded. The project is practically complete and has cost nearly five lakhs of rupees. Some smaller works have been carried out in the Bharatpur State. Ramgarh is said to have once been the capital of the Jaipur State under the name of Māshi; there is a temple in the gorge called Jumwa Devi

N

which is visited by the Mahārājās of Jaipur on their accession to the gaddi. Here they are shaved, the process being part of the ceremony connected with the accession.

The stream in the gorge near Rāmgarh is perennial, but lower down the bed dries up except during the rains. The banks are for the most part low, and in Bharatpur are covered, often to a distance of two or three miles from the stream, with a dense growth of jungle grass and tamarisk. In Dholpur territory ravines run inland from either bank, sometimes for a distance of two miles or more. Where it first touches the United Provinces, the Bāngangā is a mountain torrent with a bed of sand mixed with gravel. The principal tributaries are the Gambhir, Kawār or Koela, and Pārvatī on the right bank, and the Khārī on the left. The Bāngangā and Khārī often bring down disastrous floods. In Bharatpur the violence of these has given the river the name of Ghora-pachhār or 'overthrower of horses.'

[Papers relating to the Irrigation of the Agra District from the Utangan River (Roorkee, 1853-4).]

Betwā (Vetravati, or 'containing canes').- A large river of Northern India. It rises in Bhopal State at the village of Kumri (22° 55' N. and 77° 43' E.), and flows in a generally north-eastern direction; after a course of about 50 miles in Bhopāl it enters Gwalior territory near Bhīlsa. It first touches the United Provinces in the south-west corner of the Lalitpur talisil of Ihansi District, and flows north and north-east, forming the boundary between that District and the Gwalior State. It then crosses the District obliquely, traverses part of the Orchhā State, and flows for some distance between Jalaun on the north and Jhansi and Hamirpur on the south. falling into the Jumna, after a course of about 190 miles in the United Provinces, close to the town of Hamīrpur. In the upper part of its course the Betwa flows over the Vindhya sandstone, crossed by veins of quartz which break it up into beautiful cascades. At DEOGARH it passes in a magnificent sweep below a steep sandstone cliff on the eastern bank, surmounted by a ruined fort. Below Thansi its bed is granite for about 16 miles till it reaches the alluvial plain. It is nowhere navigable, and its crossings are often dangerous. There are railway bridges at Barkhera on the Bhopāl-Hoshangābād section of the Great Indian Peninsula, at Sănchi on the Bhopāl-Jhansi section, at Mangaoli on the Bina-Guna line, and near Orchhā on the Mānikpur-Jhānsi line. Road bridges cross it at Bhilsa and at Orchha. At Parichha, 15 miles from Ihansi, the

RIVERS . 179

river has been dammed to supply the Betwā Canal, a protective work which serves part of Jhānsi, Jālaun, and Hamīrpur, and was found of great value in 1896-7. Proposals are under consideration for damming the river at other places, so as to increase the amount of water available, and one dam has recently been completed. The chief tributaries are the Bes in Central India, the Jamnī and Dhasān in Jhānsi, and the Pāwan in Hamīrpur. The river is mentioned in the Purānas, and also in the Afeghadūta of Kālidāsa. According to tradition, the Pāndavas fought with the king of Videsa (Bhīlsa) on its banks.

Dhasan (Dasharna: possibly the Dasaron of Ptolemy).-A river of Northern India. It rises in Bhopal State (23° 32' N., 78° 30' E.) among the Vindhyas, and after crossing Saugor District in the Central Provinces for about 60 miles. first touches the United Provinces in the extreme south of the Lalitpur talist of Jhansi District, which it divides from Saugor for about 30 miles. It then crosses several of the Bundelkhand States, and finally forms the boundary between Jhansi and Hamirpur for nearly 70 miles, till its junction with the Betwa at Chandwari on the border of Jalaun District. The bed of the Dhasan is rocky in Saugor and Lalitpur, and at intervals after it first enters Thansi and Hamirpur, but is then generally sandy, with nullahs and ravines running into it. Except during the rains it is easily fordable. A scheme has been sanctioned for the provision of irrigation in the west of Hamfrpur by damming this river and forming a reservoir.

Ken (or Kayan: Skt. Karnavati: the Kainas of Arrian).-A river of Bundelkhand. It rises in the north-western slopes of the Kaimur Hills (23° 54' N., 80° 10' E.), and flowing north-east through Damoh and Panna enters Banda District in the United Provinces near Bilharka. After a course of more than too miles along the border of and through Banda, it joins the Junna near Chilla, on the road from Banda to Fatehpur, 230 miles from its source. The river flows in a deep, well-defined bed, and is navigable for small boats as fur as Banda town; but there is not much traffic. At Banda the bed is sandy, but pebbles and fragments of quartz and other rocks are found in it, which are polished and made into ornaments. Above Banda the bed becomes more rocky, and the scenery near Kharauni is singularly beautiful. A canal taking off from the river near Bariarpur in the Ajaigarh State has recently been completed. At present it is designed to irrigate only a part of Banda District, namely, the area between the Ken and Bāghain, of which it will command about

half, or 374,000 acres. The reservoir formed in connexion with this project will impound about 182 million cubic feet of water in the valley of the river.

Sarda.—The name given to part of a river-system flowing from the Himālayas through north-western Oudh. streams, the Kuthi Yankti and Kālāpānī, rising in the lofty Panch Chulhi mountains in the north-east corner of Kumaun close to the Tiber frontier, unite after a few miles to form the Kālī river or Kālī Gangā, which divides Nepāl from Kumaun. At a distance of 106 miles from its source, the Kall receives the Sarjū or Rāmgangā (cast) at Pacheswar. The Sarjū and its tributary, the Ramganga (east), rise in a lofty range leading south from the peak of Nanda Kot, and unite at Rameswar, from which point the combined stream is called indifferently by either name. From the junction at Pacheswar the name Kāli is gradually lost and the river is known as Sarlū or as Sārdā. At Barmdeo the waters descend on the plains in a series of rapids, the course to this point being that of a mountain stream over a steen rocky bed. The Sarda now divides into several channels, which reunite again after a few miles at Mundia Ghat (ferry), where the last rapids occur, and the bed ceases to be composed of boulders and shingle. From this point the river forms the boundary between Nepāl and Pilibhit District of the United Provinces for a short distance, and then cuts across and enters Kheri District. In Pilibhit it is joined on the right bank by the Chauka, which is now a river of the plains, rising in the Tarai, but may have been originally formed as an old channel of the Sarda. The river is at first called both Sarda and Chauka in Kheri, and its description is rendered difficult by the many changes which have taken place in its course. Four distinct channels may be recognized, which are, from south to north, the Ul, the Sārdā or Chaukā, the Dahāwar, and the Suheli. The first of these is a small stream which joins the Chanka again. name Sarda is occasionally applied to the second branch in its lower course through Sitapur, but this is more commonly called Chaukii. After a long meandering course it fulls into the Gogka at Bahrämghät. This channel appears to have been the principal bed from the middle of the eighteenth to the middle of the nineteenth century. The largest volume of water is, however, at present brought down by the Dahäwar. which leaves the Chauka in pargana Dhaurahra. The Suheli brings down little water and joins the KAURIAIA (afterwards called the Gogra).

Chaukā.—A river of Oudh, being one of the branches into which the Sāruā splits up in Kherī District. Its channel now contains little water, but has a long course through Kherī, Shāpur, and Bāra Bankī, joining the Gogra near Bahrāmghāt. The name is also applied to an old bed of the Sārdā which now joins that river in Pilibhīt.

Kauriāla (also called Karnāli) .- A river of Northern India, rising in Tibet, not far from one of the sources of the Sutlei. in 30° 40' N. and 80° 48' E. After leaving Tibet by the Takla Khar or Yari Pass, it flows through Nepal, generally in a south-easterly direction, till it emerges from the lower range of the Himālayas through a deep picturesque gorge known as Shisha Pani ('glass water'). The stream here is about 300 yards broad and of great depth, with a slow current, closely shut in by precipitous mountains 2,500 feet high. A little below Shīshā Pānī the channel widens, with a steeper and rockier descent, causing magnificent rapids nearly half a mile Lower down the river divides into two, the western branch retaining the name of Kauriāla or Karnāli, the eastern being called the GIRWA. Formerly the latter was insignificant stream, but its volume has gradually increased till it is now considerably larger than that of the Kauriāla. They are both rapid rivers, with pebbly beds and fords which an elephant can generally cross without difficulty. miles from its point of exit from the hills the Kauriāla enters British territory, at the point where it receives the Mohan, and marks the boundary between the Oudh Districts of Kheri and Bahraich. It now receives on the east bank its former offshoot, the Girwa, and on the west the Suheli, the Dahäwar, and the Chauka, all branches of the SARDA river. From the noint of confluence with the Chauka the united rivers become the Gogra, which ultimately fulls into the Ganges on its left bank, a little above Dinapore. The Kauriāla is navigable by large boats of about 17 tons burthen beyond the limits of British territory. The principal traffic is the export of gram, and of timber, ginger, pepper, ghi, and catechu from Nepal. Gold-washing is carried on by a caste called after their occupation Sonahis. The river abounds in fish.

Girwā.—A branch of the Kauriāla river in Nepāl and Oudh. The Kauriāla bursts through a gorge in the Himālayas called Shīshā Pānī, or 'glass water,' and a little below this point divides into two, the western branch retaining the name Kauriāla, while the eastern is called Girwā. The latter is now the more considerable, though it was formerly the smaller of

of the Bengal and North-Western Railway, within the last twenty years, trade on the Gogra was of great importance. Many years ago a pilot service existed for a short time, and steamers plied as far as Bahramghat in Bara Banki District. The traffic is still considerable, and large quantities of timber, grain, and spices come down from Nepāl, or are carried in the lower At Bahramghat saw-mills used to be worked by the Forest department, but have recently been sold. The most important place on the banks of the river is Fyzābād, with Ajodhya, the sacred birthplace of Rama, adjoining it. in Fyzabad and Barhaj in Gorakhpur are also towns of some size, engaged in trade. The chief mart on the banks of the Gogra in Bengal is Revelgani in Saran District. The trade of Nawabgani in Gonda, which stands some miles from the river. is now largely carried by rail. River steamers from Patna ply as high as Ajodhvii, calling at many places and competing with the railways for both goods and passenger traffic.

The river is spanned by two fine railway bridges: the Elgin Bridge near Bahrāmghāt (3,695 feet long), and a bridge at Turtīpār (3,912 feet). The variability of its course is shown by the method of construction of the first-named bridge, which was built on dry land, the river being then trained under it. The height above sea-level is 350 feet at Bahrāmghāt and 193 feet at Turtīpār; and the flood dischārges are 877,000 and 1,111,000 cubic feet per second respectively. At Ajodhyā a bridge of boats is maintained, except during the rains, when a steamer plies. Another important ferry is at Dohrīghāt on the road from Azamgarh to Gorakhpur.

Rapti sidentified by Lassen with the Solomatis of Arrian =Skt. Sarāvati; by Pargiter with the Sadānīra ('ever-flowing') of the epics; also called Iravali ('refreshing')].-A river which rises in the lower ranges of Nepal (27° 49' N., 82° 44' E.), and joins the Gogka in Gorakhpur District of the United Provinces. Its course is first south and then north-west and west, after which it again turns south and crosses the border of Oudh in Bahraich District. It then flows south-east or south through Bahraich. Gonda, Basti, and Gorakhpur Districts, with a total course of about 100 miles. Its wide bed is confined within high banks. but the actual channel shifts considerably. Floods are not uncommon, but do little damage, if they subside in time for spring crops to be sown, as the silt deposited acts as a fertilizer. The feeders of this river are chiefly small rivers rising in the tarai north of its course, the largest being the Dhamela, joined by the Chunght, and the Rohini, in Gorakhpur. In Gonda and

Bastī an old bed of the river, called the Būrhī Rāptī, some miles north of its present course, brings down a considerable amount of water in the rains. The Rakhira Lake in Basti District and the Chilūā lake in Gorakhpur drain into it. The Rāptī is navigable for small boats as high as Bhingā in Bahraich, and for large boats to the town of Gorakhpur, which stands near its banks. Much timber and grain from Nepāl and the British Districts which it traverses are carried down into the Gogra, and hence into the Ganges; but the traffic has fallen off since the extension of the Bengal and North-Western Railway. The Rāptī is rarely used for irrigation.

Banganga ('Arrow-river').—A hill stream rising in the south of Nepal (27° 42' N., 83° 6' E.), which flows for about 18 miles through Basti District and joins the Bürhi Rāpti ('old' Rāpti) at Kabrahi Ghāt, where the road from Basti through Bānsī to Nepāl crosses the latter river. Timber from Nepāl is floated down. Traces of the bed of another river of the same name still exist south of the Rāpti and the upper course of the Katnehiā. A tributary of the Kuwānā in Basti, which formed ofthe branch of this, is still called Bāngangā.

[Cunningham, Archaeological Survey Reports, vol. xxii, p. 4.] Gandak, Great -A river of Northern India. Rising in the central mountain basin of Nepal, in 276 27' N. and 83° 56' E., where its sources are known as the Sapt Gandaki, or 'country of the seven Gandaks,' it drains the tract between the Dhaulagiri and Gosainthan mountains. The most important of these contributory streams is the Trisulgauga, and they all unite before breaking through the mountains at Tribent. The river is also known in Nepāl as the Sālgrāmi, and in the United Provinces as the Nārāyani; it is the Kondochates of the Greek geographers, and according to Lassen the Sadanira ('ever-flowing') of the epics. Crossing the British frontier at Tribent, it forms the boundary between Champaran District of Bengal and Gorakhpur District of the United Provinces for about 20 miles, after which it flows for 40 miles within Champaran, and then once more separates the Provinces for 12 miles of its course. Thenceforward it forms the boundary between Saran District of Bengal on the south-west and Champaran and Muzaffarpur Districts on the north-east, and it finally joins the Gauges opposite Patna, in 25° 41' N. and 85° 12' E., after a course of 192 miles. At first a snow-fed torrent, the Gandak, soon after its entry into British territory, acquires the character of a deltaic river, its banks being above the level of the surrounding country, which is protected by embankments

from inundation. The river is pavigable throughout the year by country boats below Bagahā in Champāran District. timber pass down it from Nepël and from the Gorakhpur forests, and grain and sugar are exported by the same route. Navigation is, however, difficult, as the channel during the dry season is narrow and winding, while in the rains it becomes a torrent. In the hot season the river is rarely more than a quarter of a mile across, but in the rains it widens to 2 or 3 miles. It is nowhere fordable, and is continually changing its course. The TRIBENT CANAL, now under construction, will carry its waters castward to within 10 miles of Adapur in Champaran District, and will irrigate the portion of that District most liable to famine. The Saran Canals are fed from a side channel on the right bank of the river. The Burhi ('old') Gandak, or Sikrāna, an old channel of the river, is described in the article on CHAMPARAN DISTRICT. A fine railway bridge on the Bengal and North-Western Railway spans the Gandak near its mouth. The most important place on its bank is Hajirur on the left bank, and a great bathing festival takes place annually at Sonpur at its confluence with the Ganges.

Gandak, Little.—A river which rises in the lower Nepāl hills, and enters Gorakhpur District of the United Provinces a few miles west of the GREAT GANDAK. It flows from north to south through the whole length of Gorakhpur, and joins the GOGRA just within Sāran District of Bengal. Except in the rains it has a small stream, not exceeding 60 feet in breadth, and is generally fordable. In 1859 it was proposed to make it into a navigable canal, but the scheme was never carried out. Boats ply during the rains as high as Ragarganj in the Padraunā talsīl.

Himālayas, The.—A system of stupendous mountain ranges, lying along the northern frontiers of the Indian Empire, and containing some of the highest peaks in the world. Literally, the name is equivalent to 'the abode of Name. snow' (from the Sanskrit hima, 'frost,' and ālaya, 'dwelling-place'). To the early geographers the mountains were known as Imaus or Himaus and Hemodas; and there is reason to believe that these names were applied to the western and eastern parts respectively, the sources of the Ganges being taken as the dividing line. 'Hemodas' represents the Sanskrit Himāvata (Prākrit Hemota), meaning 'snowy.' The Greeks who accompanied Alexander styled the mountains the Indian Caucasus.

trees, fringed with delicate orchids and festooned by long convolvuluses, to the region of gigantic pines, junipers, firs, and larches. Down each ravine sparkles a brimming torrent, making the ferns and flowers nod as it dashes past them! Superb butterflies, black and blue, or flashes of minbow colours that turn at pleasure into exact imitations of dead leaves, the fairies of this lavish transformation scene of Nature, sail in and out between the sunlight and the gloom. The mountaineer pushes on by a track half buried between the red twisted stems of tree-rhododendrons, hung with long waving lichens, till he emerges at last on open sky and the upper pastures—the Alps of the Himilaya-fields of flowers: of gentians and edelweiss and poppies, which blossom beneath the shining storehouses of snow that encompass the ice-mailed and fluted shoulders of the giants of the range. If there are mountains in the world which combine as many beauties as the Sikkim Himālayas, no traveller has as yet discovered and described them for us."

Snow-line.

The line of perpetual snow varies from 15,000 to 16,000 feet on the southern exposures. In winter, snow generally falls at elevations above 5,000 feet in the west, while falls at 2,500 feet were twice recorded in Kumaun during the last century. Glaciers extend below the region of perpetual snow, descending to 12,000 or 13,000 feet in Kulü and Lāhul, and even lower in Kumaun, while in Sikkim they are about 2,000 feet higher. On the vast store-house thus formed largely depends the prosperity of Northern India, for the great rivers which derive their water from the Himälayas have a perpetual supply which may diminish in years of drought, but cannot fail absolutely to feed the system of canals drawn from them.

Rivers.

While all five rivers from which the Punjab derives its name rise in the Himālayas, the Sutlei alone has its source beyond the northern range, near the head-waters of the Indus In the next section are found the sources of the Jumna, Ganges, and Kālī or Sārdā high up in the central snowy range, while the Kauriāla or Karnāli, known lower down in its course as the Cogra, rises in Tibet, beyond the The chief rivers of Nepal, the Gandak northern watershed. and Kosi, each with seven main affluents, have their birth in the Himālayas, which here supply a number of smaller streams merging in the larger rivers soon after they reach the plains. Little is known of the upper courses of the northern tributaries of the Brahmaputra in Assam; but it seems probable that the Dihang, which has been taken as the eastern boundary of the Himālayas, is the channel connecting the Tsan-po and the Brahmaputra.

Passing from east to west the principal peaks are Nanga Highest Parbat (26,182) in Kashmir; a peak in Spiti (Kängra District) Peaks. exceeding 23,000 feet, besides three over 20,000; Nanda Devi (25,661), Trisul (23,382), Panch Chulhi (22,673), and Nanda Kot (22,538) in the United Provinces; Mount Everest (20,002), Devālagiri (26,826), Gosainthān (26,305) and Kinchinjunga (28,146), with several smaller peaks, in Nepal; and Dongkya (23,190), with a few rising above 20,000, in Sikkim.

The most considerable stretch of level ground is the beauti- Valleys ful Kashmīr Valley, through which flows the Jhelum. length about 84 miles, it has a breadth varying from 20 to 25 miles. Elsewhere steep ridges and comparatively narrow gorges are the rule, the chief exception being the Valley of Nepāl, which is an undulating plain about 20 miles from north to south, and 12 to 14 miles in width. Near the city of Stinagar is the Dal Lake, described as one of the most picturesque in the world. Though measuring only 4 miles by 23, its situation among the mountains, and the natural beauty of its banks, combined with the endeavours of the Mughal emperors to embellish it, unite to form a scene of great attractions. Some miles away is the larger expanse of water known as the Wular Lake, which ordinarily covers 121 square miles, but in years of flood expands to over 100. A number of smaller lakes, some of considerable beauty, are situated in the outer ranges in Naini Tal District. In 1003 the GOHNA LAKE, in Garhwal District, was formed by the subsidence of a steep hill, rising 4,000 feet above the level of a stream which it blocked.

The geological features of the Himālayas can be conveniently Geology 1. grouped into three classes, roughly corresponding to the three main orographical zones: (1) the Tibetan highland zone, (2) the zone of snowy peaks and Outer Himālayas, and (3) the Sub-Himālayas.

In the Tibetan highlands there is a fine display of marine fossiliferous rocks, ranging in age from Lower Palaeozoic to Tertiary. In the zone of the snowy peaks granites and crystalline schists are displayed, fringed by a mantle of unfossiliferous rocks of old, but generally unknown, age, forming the lower hills or Outer Himālayas, while in the Sub-Himālayas the rocks are practically all of Tertiary age, and are derived from the waste of the highlands to the north.

The disposition of these rocks indicates the existence of Age and a range of some sort since Lower Palacozoic times, and shows origin of the range. 1 By T. H. Holland, Geological Survey of India.

that the present southern boundary of the marine strata on the northern side of the crystalline axis is not far from the original shore of the ocean in which these strata were laid down. The older unfossiliferous rocks of the Lower Himalaras on the southern side of the main crystalline axis are more nearly in agreement with the rocks which have been preserved without disturbance in the Indian Peninsula; and even remains of the great Gondwana river-formations which include our valuable deposits of coal are found in the Darjeeling area, involved in the folding movements which in later geological times raised the Himalayas to be the greatest among the mountain ranges of the world. The Himālayas were thus marked out in very early times, but the main folding took place in the Tertiary The great outflow of the Decean trap was followed by a depression of the area to the north and west, the sea in eocene times spreading itself over Rajputana and the Indus valley, covering the Punjab to the foot of the Outer Himālayas as far east as the Ganges, at the same time invading on the east the area now occupied by Assam. Then followed a rise of the land and consequent retreat of the sea, the fresh-water deposits which covered the cocene marine strata being involved in the movement as fast as they were formed, until the Sub-Himālayan zone river-deposits, no older than the pliocene, became tilted up and even overturned in the great foldings of the strata. This final rise of the Himālayan range in late Tertiary times was accompanied by the movements which gave rise to the Arakan Yoma and the Naga hills on the east, and the bills of Baluchistan and Afghanistan on the west.

The rise of the Himālayan range may be regarded as a great buckle in the earth's crust, which raised the great Central Asian plateau in late Tertiary times, folding over in the Baikal region on the north against the solid mass of Siberia, and earling over as a great wave on the south against the firmly resisting mass of the Indian Peninsula.

As an index to the magnitude of this movement within the Tertiary era, we find the marine fossil foraminifer, Nummulites, which lived in eocene times in the ocean, now at elevations of 20,000 feet above sea-level in Zāskār. With the rise of the Himālayan belt, there occurred a depression at its southern foot, into which the alluvial material brought down from the hills has been dropped by the rivers. In miocene times, when presumably the Himālayas did not possess their present elevation, the rivers deposited fine sands and clays in this area; and as the elevatory process went on, these deposits became

tilted up, while the rivers, attaining greater velocity with their increased gradient, brought down coarser material and formed conglomerates in pliocene times. These also became elevated and cut into by their own rivers, which are still working along their old courses, bringing down boulders to be deposited at the foot of the hills and carrying out the finer material farther over the Indo-Gangetic plain.

The series of rocks which have thus been formed by the The rivers, and afterwards mised to form the Sub-Himalayas, are Siwalk series. known as the Siwālik series. They are divisible into three stages. In the lowest and oldest, distinguished as the Nahan stage, the rocks are fine sandstones and red clays without any pebbles. In the middle stage, strings of pebbles are found with the sandstones, and these become more abundant towards the top, until we reach the conglomerates of the upper stage. Along the whole length of the Himālayas these Siwālik rocks are cut off from the older rock systems of the higher hills by a great reversed fault, which started in early Siwālik times and developed as the folding movements raised the mountains and involved in its rise the deposits formed along the foot of the The Siwalik strata never extended north of this great range. boundary fault, but the continued rise of the mountains affected these deposits, and raised them up to form the outermost zone of hills.

The upper stage of the Siwālik series is famous on account of the rich collection of fossil vertebrates which it contains. Among these there are forms related to the miocene mammals of Europe, some of which, like the hippopotamus, are now unknown in India but have relatives in Africa. Many of the mammals now characteristic of India were represented by individuals of much greater size and variety of species in Siwālik times.

The unfossiliferous rocks which form the Outer Himālayas Unfossilare of unknown age, and may possibly belong in part to the iferous unfossiliferous rocks of the Peninsula, like the Vindhyans and Outer the Cuddapalis. Conspicuous among these rocks are the Himiladolomitic limestones of Jaunsar and Kumaun, the probable yas. equivalents of the similar rocks far away to the east at Buxa in the Duars. With these a series of purple quartities and basic lava-flow is often associated. In the Simla area the unfossiliferous rocks have been traced out with considerable detail; and it has been shown that quartzites, like those of Jaunsar and Kumaun, are overlaid by a system of rocks which has been referred to the carbonaceous system on account of

the black carbonaceous slates which it includes. The only example known of pre-Tertiary fossiliferous rocks south of the snowy range in the Himālayas occurs in south-west Garhwāl, where there are a few fragmentary remains of mesozoic fossils of marine origin.

The crystalline

The granite rocks, which form the core of the snowy range and in places occur also in the Lower Himālayas, are igneous rocks which may have been intruded at different periods in the history of the range. They are fringed with crystalline schusts, in which a progressive metamorphism is shown from the edge of granitic rock outwards, and in the inner zone the granitic material and the pre-existing sedimentary rock have become so intimately mixed that a typical banded gneiss is produced. The resemblance of these gneisses to the well-known gneisses of Archaenn age in the Peninsula and in other parts of the world led earlier observers to suppose that the gneissose rocks of the Central Himālayas formed an Archaean core, against which the sediments were subsequently laid down. But as we now know for certain that both granites, such as we have in the Himālayas, and banded gneisses may be much younger, even Tertiary in age, the mere composition and structure give no clue to the age of the crystalline axis. The position of the granite rock is probably dependent on the development of lowpressure areas during the process of folding, and there is thus a prima facie reason for supposing that much of the igneous material became injected during the Tertiary period. With the younger intrusions, however, there are probably remains of injections which occurred during the more ancient movements, and there may even be traces of the very uncient Archaean gneisses; for we know that pebbles of gneisses occur in the Cambrian conglomerates of the Tibetan zone, and these imply the existence of gneissose rocks exposed to the atmosphere in neighbouring highlands. The gneissose granite of the Central Himālayas must have consolidated under great pressure, with a thick superincumbent envelope of sedimentary strata; and their exposure to the atmosphere thus implies a long period of effectual erosion by weathering agents, which have cut down the softer sediments more easily and left the more resisting masses of crystalline rocks to form the highest peaks in the Excellent illustrations of the relationship of the gneissose granites to the rocks into which they have been intruded are displayed in the Dhaola Dhar in Kulu, in the Chor Peak in Garhwal, and in the Darjeeling region east of Nepāl.

Beyond the snowy range in the Tibetan zone we have a Fossilremarkable display of fossiliferous rocks, which alone would rocks of have been enough to make the Himālayas famous in the the Tibegeological world. The boundary between Tibetan territory tan zone. and Spiti and Kumaun has been the area most exhaustively studied by the Geological Survey. The rocks exposed in this zone include deposits which range in age from Cambrian to Tertiary. The oldest fossiliferous system, distinguished as the Haimanta ('snow-covered') system, includes some 3,000 feet of the usual sedimentary types, with fragmentary fossils which indicate Cumbrian and Silurian affinities. Above this system there are representatives of the Devonian and Carboniferous of Europe, followed by a conglomerate which marks a great stratigraphical break at the beginning of Permian times in Northern India. Above the conglomerate comes one of the most remarkably complete succession of sediments known, ranging from Permian, without a sign of disturbance in the process of sedimentation, throughout the whole Mesozoic epoch to the beginning of Tertiary times. The highly fossiliferous character of some of the formations in this great pile of strata, like the Productus shales and the Spiti shales, has made this area classic ground to the palaeontologist.

The great Eurasian sea distinguished by the name 'Thetys,' which spread over this area throughout the Palaeozoic and Mesozoic times, became driven back by the physical revolution which began early in Tertiary times, when the folding movements gave rise to the modern Himālayas. As relies of this ocean have been discovered in Burma and China it will not be surprising to find, when the ground is more thoroughly explored, that highly fossiliferous rocks are preserved also in the Tibetan zone beyond the snowy ranges of Nepal and Sikkim.

Of the minerals of value, graphite has been recorded in the Economic Kumaun Division; coal occurs frequently amongst the Num-minerals. mulitic (eocene) rocks of the foot-hills and the Gondwana strata of Darjeeling District; bitumen has been found in small quantities in Kumaun; stibnite, a sulphide of antimony, occurs associated with ores of zinc and lead in well-defined lodes in Lahul; gold is obtained in most of the rivers, and affords a small and precarious living for a few washers; copper occurs very widely disseminated and sometimes forms distinct lodes of value in the slaty series south of the snowy range, as in the Kulu, Kumaun, and Darjeeling areas; ferruginous schists sometimes rich in iron occur under similar geological conditions, as in Kangra and Kumaun; sapphires of considerable

value have been obtained in Zāskār and turquoise from the central highlands; salt is being mined in quantity from near the boundary of the Tertiary and older rocks in the State of Mandi; borax and salt are obtained from lakes beyond the Tibetan horder; slate-quarrying is a flourishing industry along the southern slopes of the Dhaola Dhār in Kāngra District; mica of poor quality is extracted from the pegmatites of Kulū; and a few other minerals of little value, besides building stones, are obtained in various places. A small trade is developed, too, by selling the fossils from the Spiti shales as sacred objects.

Botany.

The general features of the great variety in vegetation have been illustrated in the quotation from Mr. Freshfield's description of Sikkim. These variations are naturally due to an increase in elevation, and to the decrease in rainfall and humidity passing from south to north, and from east to west. The tropical zone of dense forest extends up to about 6,500 feet in the east, and 5,000 feet in the west. In the Eastern Himālayas orchids are numerically the predominant order of flowering plants; while in Kumaun about 62 species, buth eniphytic and terrestrial, have been found. A temperate zone succeeds, ranging to about 12,000 feet, in which oaks, pines, and tree-rhododendrons are conspicuous, with chestnut, maple, magnolia, and laurel in the east. Where min and mist are not excessive, as for example in Kulū and Kumaun, European fruit trees (apples, pears, apricots, and peaches) have been naturalized very successfully, and an important crop of potatoes is obtained in the west. Above about 12,000 feet the forests become thinner. Birch and willow mixed with dwarf rhododendrons continue for a time, till the open pasture land is reached, which is richly adorned in the summer months with brilliant Alpine species of flowers. Contrasting the western with the eastern section we find that the former is far less rich. though it has been better explored, while there is a preponderance of European species. A fuller account of the botanical features of the Himālayas will be found in Vol. 1, chap. iv.

Fauna.

To obtain a general idea of the fauna of the Himālayas it is sufficient to consider the whole system as divided into two tracts: namely, the area in the lower hills where forests can flourish, and the area above the forests. The main characteristics of these tracts have been summarized by the late Dr. W. T. Blanford. In the forest area the fauna differs markedly from that of the Indian Peninsula stretching away

<sup>&</sup>lt;sup>1</sup> The Distribution of Vertebrate Animals in India, Ceylon and Burma, Proceedings, Rayal Society, vol. lxvii, p. 484.

from the base of the hills. It does not contain the so-called Aryan element of mammals, birds, and reptiles which are related to Ethiopian and Holarctic genera, and to the pliocene Siwalik fauna, nor does it include the Dravidian element of reptiles and hatrachians. On the other hand, it includes the following animals which do not occur in the Peninsula-Mammals: the families Simiidae, Procyonidae, Talpidae, and Spalacidae, and the sub-family Gymnurinae, besides numerous genera, such as Prionodon, Helictis, Arctonyx, Atherura, Nemorhaedus, and Cemar. Birds: the families Eurylaemidae, Indicatoridae, and Heliornithidae, and the sub-family Paradoxornithinae. Reptiles: Platysternidae and Anguidae. Batrachians: Dyscophidae. Hylidae, Pelobatidae, and Salamandridae. Compared with the Peninsula, the fauna of the forest area is poor in reptiles and batrachians.

'It also contains but few peculiar genera of mammals and birds, and almost all the peculiar types that do occur have Holarctic affinities. The Oriental element in the fauna is very richly represented in the Eastern Himālayas and gradually diminishes to the westward, until in Kashmīr and farther west it ceases to be the principal constituent. These facts are consistent with the theory that the Oriental constituent of the Himālayan fauna, or the greater portion of it, has migrated into the mountains from the eastward at a comparatively recent period. It is an important fact that this migration appears to have been from Assam and not from the Peninsula of India.'

Dr. Blanford suggested that the explanation was to be found in the conditions of the glacial epoch. When the spread of snow and ice took place, the tropical fauna, which may at that time have resembled more closely that of the Peninsula, was forced to retreat to the base of the mountains or perished. At such a time the refuge afforded by the Assam Valley and the hill ranges south of it, with their damp, sheltered, forest-clad valleys, would be more secure than the open plains of Northern India and the drier hills of the country south of these. As the cold epoch passed away, the Oriental fauna re-entered the Himālayas from the east.

Above the forests the Himālayas belong to the Tibetan sub-region of the Holarctic region, and the fauna differs from that of the Indo-Malay region, 44 per cent. of the genera recorded from the Tibetan tract not being found in the Indo-Malay region. During the glacial epoch the Holarctic forms apparently survived in great numbers.

Owing to the rugged nature of the country, which makes People.

travelling difficult and does not invite immigrants, the inhabitants of the Himālayas present a variety of ethnical types which can hardly be summarized briefly. Two common . features extending over a large area may be referred to. From Ladakh in Kushmir to Bhutan are found races of Indo-Chinese type, speaking dialects akin to Tibetan and professing Buddhism. In the west these features are confined to the higher ranges; but in Sikkim, Darjeeling, and Blutan they are found much nearer the plains of India. Excluding Burma, this tract of the Himalayas is the only portion of India in which Buddhism is a living religion. As in Tibet, it is largely tinged by the older animistic beliefs of the people. Although the Muhammadans made various determined efforts to conquer the hills, they were generally unsuccessful, yielding rather to the difficulties of transport and climate than to the forces brought against them by the scanty though brave population of the hills. In the twelfth century a Tartar horde invaded Kashmir, but succumbed to the rigours of the snowy passes. Subsequently a Tibetan soldier of fortune seized the supreme power and embraced Islam. Late in the fourteenth century the Muhammadan ruler of the country, Sultan Sikandar, pressed his religion by force on the people, and in the province of Kashmir proper 94 per cent, of the total are now Muhammedans. Baltistan is also inhabited chiefly by Muhammadans, but the proportion is much less in Jammu, and beyond the Kashmir State Islam has few followers. Hinduism becomes an important religion in Jammu, and is predominant in the southern portions of the Himalayas within the Punjab and the United Provinces. It is the religion of the ruling dynasty in Nepāl, where, however, Buddhism is of almost equal strength. East of Nepal Hindus are few. Where Hinduism prevails, the language in common use, known as Pahāri, presents a strong likeness to the languages. of Rajputana, thus confirming the traditions of the higher classes that their ancestors migrated from the plains of India. In Nepāl the languages spoken are more varied, and Newāri, the ancient state language, is akin to Tibetan. The Mongolian element in the population is strongly marked in the east, but towards the west has been pushed back into the higher portion of the ranges. In Known are found a few shy people living in the recesses of the jungles, and having little intercourse with their more civilized neighbours. Tribes which appear to be akin to these are found in Nepal, but little is known about North of Assam the people are of Tibeto-Burman' origin, and are styled, passing from west to east, the Akas, Daffas, Miris, and Abors, the last name signifying 'unknown savages.' Colonel Dalton has described these people in his Ethnology of Bengal.

From the commercial point of view the agricultural products Agriculof the Himalayas, with few exceptions, are of little importance. ture. The chief food-grains cultivated are, in the outer ranges, rice, wheat, barley, marua, and amaranth. In the hot, moist valleys. chillies, turmeric, and ginger are grown. At higher levels notatoes have become an important crop in Kumaun; and, as already mentioned, in Kulū and Kumaun European fruits have been successfully naturalized, including apples, pears, cherries, and strawberries. Two crops are obtained in the lower hills: but cultivation is attended by enormous difficulties. owing to the necessity of terracing and clearing land of stones, while irrigation is only practicable by long channels winding along the hill-sides from the nearest suitable stream or spring. As the snowy ranges are approached wheat and buckwheat, grown during the summer months, are the principal crops, and only one harvest in the year can be obtained. Tea gardens were successfully established in Kumaun during the first half of the nineteenth century, but the most important gardens are now situated in Kangra and Darjeeling. In the latter District cinchona is grown for the manufacture of quinine and cinchona febrifuge.

The most valuable forests are found in the Outer Himālayas, Forests. vielding a number of timber trees, among which may be mentioned sal, shisham (Dalbergia Sissoo), and tim (Cedrela toona). Higher up are found the deedar and various kinds of pine, which are also extracted wherever means of transport can be devised. In the Eastern Himālayas wild rubber is collected by the hill tribes already mentioned, and brought for sale to the Districts of the Assam Valley.

Communications within the hills are naturally difficult. Rail- Means of ways have hitherto been constructed only to three places in the communiouter hills: Jammu in the Kashmir State, Simla in the Punjab, and Darjeeling in Bengal. Owing to the steepness of the hillsides and the instability of the strata composing them, these lines have been costly to build and maintain. A more ambitions project is now being carried out to connect the Kashmir Valley with the plains, motive power being supplied by electricity to be generated by the Jhelum river. The principal road practicable for wheeled traffic is also in Kashmir, leading from Rāwalpindi in the plains through Murree and Bāramūla

to Sringgar. Other cart-roads have been made connecting with the plains the hill stations of Dharmsala, Simla, Chakrāta, Mussoorie, Dalhousie, Naini Tāl, and Rānikhet. In the interior the roads are merely bridle paths. The great rivers flowing in deep gorges are crossed by suspension bridges made of the rudest materials. The sides consist of canes and twisted fibres, and the footway may be a single bamboo laid on horizontal canes supported by ropes attached to the sides. 'These frail constructions, oscillating from side to side under the trend of the traveller, are crossed with perfect confidence by the natives, even when hearing heavy loads. On the more frequented paths, such as the pilgrim road from Hardwar up the valley of the Ganges to the holy shrines of Badrinath and Redarnath, more substantial bridges have been constructed by Government, and the roads are regularly repaired. Sheep and, in the higher tracts, yaks and crosses between the yak and ordinary cattle are used as beasts of burden. The trade with Tibet is carried over lofty passes, the difficulties of which have not yet been ameliorated by engineers. Among these the following may be mentioned: the Kangwa La (15,500 feet) on the Hindustan-Tibet road through Simla; the Mana (18,000 feet), Niti (16,570 feet), and Balcha Dhura in Garhwal; the Anta Dhurā (17,270 feet), Lampiya Dhurā (18,000 feet), and Lipu Lekh (16,750) in Almora: and the Jolep La (14,390) in Sikkim.

Bibliography.

[More detailed information about the various portions of the Himalayas will be found in the articles on the political divisions referred to above. An admirable summary of the orography of the Himālayas is contained in Lieut.-Col. H. Fl. Godwin Austen's presidential address to the Geographical Section of the British Association in 1883 (Pracedings, Royal Geographical Society, 1883, p. 610; and 1884, pp. 83 and 112, with a map). Fuller accounts of the botany, geology, and fauna are given in E. F. Atkinson's Gazetteer of the Himalayan Districts in the North-Western [United] Provinces, 3 vols. (1882-6). See also General Strachev's 'Narrative of a Journey to Manasarowar, Geographical Journal, vol. xv. p. 150. More recent works are the Kangra District Gasetteer (Lahore, 1899); C. A. Sherring, Western Tibet and the British Borderland (1906); and D. W. Freshfield, Round Kangchenjunga (1903), which contains a full bibliography for the Eastern Himalayas. An account of the Himalayas by officers of the Survey of India and the Geological department is under preparation.]

Siwālik Hills ('belonging to Siva').-A range of hills in Northern India, running parallel to the Himālayas for about 200 miles from the Beas to the Ganges; a similar formation east of the Ganges separates the Path, Patkot, and Kotah Düns (valleys) from the outer range of the Himālayas as far as Kālādhūngī, where it merges into them, and is believed to reappear still farther east in Nepal. In the United Provinces the Siwaliks lie between the Jumna and Ganges, separating Saharanpur District from Dehra Dün, while in the Punjab they cross the Sirmur (Năhan) State and Ambala and Hoshiarpur Districts. This part of the range is irregular and pierced by several rivers, of which the Ghaggar on the west is the largest. West of the Ghaggar the hills run like a wall, separating Ambala from the long narrow valley of the Sirsa river in Nalagarh State, until they are cut through by the Sutlej at Rupar. Thence the range runs with a more northerly trend through Hoshiarpur, where it terminates near the Beas valley in a mass of undulating hills. Beyond the Sutlei there is merely a broad table-land, at first enclosed by sandy hillocks, but finally spreading into minor The southern face, in the United Provinces, rises abruptly from the plains and is scored by the bare stony beds of the watercourses which rush down in the rains. northern side is a more gentle descent into the elevated valley of Dehra Dun, which separates this range from the Himalayas. The greatest height does not exceed 3,500 feet, and the range is about ten miles broad. A road from Saharanpur to Dehra crosses these hills by the Mohan Pass, but has lost its importance since railway communication was opened through the eastern termination near the Ganges. Geologically, the Siwāliks are separated from the Outer Himālayas by a continuous reversed They contain Tertiary strata consisting of fresh-water deposits, celebrated for the fossil remains found in them and described by Falconer and Cautley. The lower hills are thickly clothed with sal (Shorea robusta) and sain (Terminalia tomentosa), while on the higher peaks a cooler climate allows pines Wild elephants are found, and also tigers, sloth bears, leopards, hyenas, various kinds of deer, and hog. term Siwālik has been applied by Muhammadan writers to the area lying south of the hills as far as Hānsi, and also to the Himalayas.

[Fulconer and Cautley (Fauna Antiqua Sivalensis), London, 1846-9-66.]

Vindhya Hills (Ouindion of Ptolemy).—A range of hills Geograseparating the Gangetic basin from the Deccan, and forming phical extent and position. a well-marked chain across the centre of India. The name was formerly used in an indefinite manner to include the Satpura Hills south of the Narbada, but is now restricted to the ranges north of that river. The Vindhyas do not form a range of hills in the proper geological sense of the term, that is, possessing a definite mis of elevation or lying along an anticlinal or synclinal ridge. The range to the north of the Narhada, and its eastern continuation the Kaimur to the north' of the Son valley, are merely the southern searps of the plateau comprising the country known as Mālwā and Bundelkhand. The features of the Vindhyas are due to sub-aerial denudation, and the hills constitute a dividing line left undenuded between different drainage areas. From a geographical point of view, the Vindhyan range may be regarded as extending from Jobat (22° 27' N. and 74° 35' E.) in Gujarat on the west to Sasarām (24° 57' N. and 84° 2' E.) in the south-western comer of Rihar on the east, with a total length of nearly 700 miles. Throughout the whole length as thus defined the range constitutes the southern escarpment of a plateau. The Raimahal Hills, extending from Sasaram to Rajmahal and forming the northern escamment of the Hazāribāgh highlands, cannot be correctly considered as a part of the Vindhyas.

i)rographical features.

The range commencing in Gujarat crosses the Central India Agency from Ihabua State in the west, and defines the southern boundary of Saugor and Damoh Districts in the Central Provinces. From here the KAIMUR branch of the range runs. through Baghelkhand or Rewah and the United Provinces into Bihar. The Knimur Hills rise like a wall to the north of the Son valley, and north of them a succession of short parallel ridges and deep ravines extends for about 50 miles. Amarkantak the Vindhyas touch the Satpura Hills at the source of the Narbada. Westward from Jubbulpore District they form the northern boundary of the valley of that giver. Their appearance here is very distinctive, presenting an almost uninterrupted series of headlands, with projecting promontories and receding bays, like a weather-beaten coast-line. 'In places the Narhada washes the base of the rocks for miles, while elsewhere they recede and are seen from the river only as a far-off outline with the plains of Bhopal or Indore spread out below them. The rocks are sandstone of a pinkish colour and lie in harizontal slabs, which commonly testify to their origin by carious ripple marks plainly formed by the lapping of water on a sandy shore. To the north of this escarpment lies the Bundelkhand or Mālwā plateau, with a length of about 250

miles and a width at its broadest part of about 225 miles. The plateau is undulating and is traversed by small ranges of hills, all of which are considered to belong to the Vindhyan system.

The most northerly of these minor ranges, called the Bindha-Outlying chal, cuts across Jhānsi, Bāndā, Allahābād, and Mirzāpur ranges. Districts in the United Provinces, nowhere rising above 2,000 feet. The range presents the appearance of a series of plateaux, each sloping gently upward from south to north, and ending abruptly in the steep scarp which is characteristic of these hills. Many outlying isolated hills are found in these Districts, standing out on the plains beyond the farthest scarp. One small hill, called Pabhosa, rises on the left bank of the Jumna, the only rock found in the Doab. The Bhanrer or Panna hills form the south-eastern face of the Vindhyan escarpment, and bound the south of Saugor and Damoh Districts and the north of Maihnr State in continuation of the Kaimur, thus being a part of the main range. They run from north-west to south-cast for about 120 miles. Their highest peak is that of Kalumar (2,544 feet). Two other branches of the range lie in Mālwā, starting respectively near Bhīlsa and Jhābua with a northerly direction, and bounding the plateau to the cast and west.

The general elevation of the Vindhyan range is from 1,500 Elevation to 2,000 feet, and it contains a few peaks above 3,000, none of drainage. which is of any special importance. The range forms with the Satpuras the watershed of the centre of India, containing the sources of the Chambal, Betwa, Sonar, Dhasan, and Ken rivers, besides others of less importance. The Son and Narbadā rise at Amarkantak, where the Vindhyan and Sātpura ranges join. The rivers generally rise near the southern escarpment and flow north and north-east.

Geologically, the hills are formed principally of great massive Geological sandstones of varying consistency, alternating with softer flags formation. and shales, the whole formation covering an area not greatly inferior to that of England. The range has given its name to the Vindhyan system of geological nomenclature. Over a great part of the Malwa plateau the sandstone is covered by the overflowing Deccan trap, while from Ginnurgarh in Bhopal to near Jobat the range itself is of basaltic formation, and the last 60 miles to the west from Jobat to near Jambhughorā consist of metamorphic rocks. In the north, the underlying gneiss is exposed in a great gulf-like expanse. Economically, the Vindhyan rocks are of considerable value, the sandstone

being an excellent building material which has been extensively used for centuries; the Buddhist topes of Sanchi and Bharhut, the eleventh-century temples of Khajraho, the fifteenthcentury palaces of Gwalior, and numerous large forts at all important positions on the plateau having been constructed of this material. At Nagod and other places limestone is found in some quantity, the pretty coralline variety, extracted from the Bagh cretaceous beds, having been extensively employed in the palaces and tombs at Manda; and at Panna, in the conglomerate which underlies the shales, diamonds are met with, though none of any great value is known to have been extracted. Manganese, iron, and ashestos are also found in various parts of the range. The lofty flat-topped hills and bold scarps which are such a marked feature of this range were early recognized as ideal sites for fortresses; and, besides the historical strongholds of Gwalior, Narwar, Chanderi, Manda, Ajaigarh, and Bandhogarh, the hills are studded with the ruined castles of marauding Girāsiā and Bundelā chiefs.

Forests.

The hills are generally covered with a stunted forest growth of the several species found in the dry forests of Central India. Teak occurs only in patches and is of small size, while the forests are generally noticeable for their poverty in valuable timbers.

Mythological associations.

The term Vindhya in Sanskrit signifies 'a hunter'; and the range occupies a considerable place in the mythology of India, as the demarcating line between the Madhya Desa or 'middle land ' of the Sanskrit invaders and the non-Aryan Deccan. The Vindhyas are personified in Sanskrit literature, where they appear as a jealous monarch, the rival of king Himālaya, who called upon the sun to revolve round his throne as he did round the peak Meru. When the sun refused, the mountain began to rear its head to obstruct that luminary, and to tower above Himalaya and Meru. The gods invoked the aid of Agastya, the spiritual guide of Vindhya. This sage called upon the Vindhya mountain to bow down before him, and afford him an easy passage to and from the South. It obeyed and Agastyn passed over. But he never returned, and so the mountain remains to the present day in its humbled condition. far inferior to the Himalaya. Another legend is that when Lakshmana, the brother of Rama, was wounded in Ceylon by the king of the demons, he wished for the leaves of a plant which grew in the Himālayas to apply them to his wound. Hanuman, the monkey-god, was sent to get it, and not knowing which plant it was, he took up a part of the Himālayas

and carried them to Ceylon. He happened to drop a portion of his load on the way, and from this the Vindhyan Hills were formed.

Kaimur Hills .- The eastern portion of the Vindhyan range, commencing near Katangi in the Jubbulpore District of the Central Provinces (23° 26' N. and 79° 48' E.). It runs a little north of east for more than 300 miles to Sasaram in Bihar (24° 57' N. and 84° 2' E.). The range, after traversing the north of lubbulpore District and the south-east of Maihar State, turns to the east and runs through Rewah territory, separating the valleys of the Son and Tons rivers, and continues into Mirzapur District of the United Provinces and Shāhābād of Bengal. Its maximum width is so miles. In the Central Provinces the appearance of the range is very The rock formation is metamorphic and the strata have been upheaved into an almost vertical position, giving the range the appearance of a sharp ridge. In places the range almost disappears, being marked only by a low rocky chain, and in this portion it never rises more than a few hundred feet above the plain. The range enters Central India at Jukchi in Maihar State (23° 29' N. and 80° 27' E.), and runs for 150 miles in a north-easterly direction, forming the northern wall of the Son valley and overhanging the river in a long bold scarp of sandstone rock, from which near Govindgarh a branch turns off to the north-west. The range here attains an elevation of a little over 2,000 feet. In Mirzāpur the height of the range decreases in the centre, to rise again to over 2,000 feet at the rock of Bijaigarh with its ancient fort. Interesting relics of prehistoric man have been found in the caves and rock-shelters of the hills here, in the form of rude drawings and stone implements. In Shāhāhād District the summits of the hills consist of a series of saucer-shaped valleys, each a few miles in diameter, containing a deposit of rich vegetable mould in the centre and producing the finest crops. The general height of the plateau is here 1,500 feet above The sides are precipitous, but there are several passes, some of which are practicable for beasts of burden. The ruined for of Rohtas is situated on these hills. rocks throughout consist principally of sandstones and shales,

Salpuras, East.—The eastern extension of the Salpura Hills of Central India, lying east and south of the Son. In the United Provinces they form a wilderness of parallel ridges of low rocky hills, extending over 1.700 square miles in the south of Mirzapur, and covered with jungle, with the exception

of a large basin in tappa Singrauli and a smaller area in Dūdhi where the soil is alluvial and allows cultivation. Coal has been found in Singrauli, and an attempt was made in 1896 to work it. The few inhabitants are chiefly jungle tribes, Kols, &c., resembling those in Chota Nagpur.

Gohnā (Gaunā).—A lake of recent formation situated near the small village of the same name in the Garhwal District of the United Provinces, in 30° 22' N. and 79° 29' E. Towards the end of the rains in 1803 two landslips took place on the right bank of the Dirahi Ganga, a tributary of the Alaknanda (see Gances). The side of a steep bill, towering 4,000 feet above the level of the stream, crashed down into the valley. hurling large blocks of limestone against the opposite cliff to the distance of a mile in places, and forming a dam more than two miles long at the base and one-third of a mile along the top, which completely blocked the valley to a height of 850 to 900 feet. It has been estimated that the dam contained o billion cubic feet of dolomite and detritus, weighing 8 hundred million tons. Special arrangements were successfully made to avoid the damage to life and property to be expected when the water should reach the top of this dam and commence to cut it away. The pilgrim road to the shrines in the Upper Himalayas lies close along the line of escape, and bridges were dismantled and diversions constructed. At Hardwar it was necessary to protect the head-works of the Ganges Canal. December, 1893, the area of the lake was about one square mile and its depth 450 feet. By July, 1894, the lake had become a large sheet of water, nearly a miles long and half a mile broad, and the level of the water had risen nearly 170 feet, while percolation was freely taking place. A month later the water was rising about 4 feet a day, and on the morning of August 25th water began to trickle over the dam, which was rapidly cut away. It was found next day that the level of the lake had fallen 300 feet, leaving a stretch of water 3,000 yards long with an average breadth of 400 yards. The depth near the dam was 300 feet, and the bed had already silted up about Immediately below the dam the flood rose 280 feet, but its height rapidly decreased as the channels of the rivers which carried it off widened. At Rudraprayag, 51 miles away, the rise was 140 feet; at Befisghat, 99 miles, 88 feet; and at Hardwar, 140 miles, only 11 or 12 feet. The total damage caused to public property was valued at more than Rs. 95,000, but no lives were lost except those of five nersons who insisted on remaining just below the dam. At Hardwar

I.AKES 205

the head-works of the Ganges Canal were slightly damaged, but beyond this point the flood had no appreciable effect. The outlet of the lake now appears to have a stable bed.

[Selections from Records, Government of India, Public Works Department, No. CCCXXIV.]

Dahar Lake.—A picturesque sheet of water near Sandt in the Hardor District of Oudh, with fine mango groves on its banks and lotus leaves floating on its waters, situated in 27° 19' N. and 70° 58' E. It is about two miles long and three-quarters of a mile wide. Fish abound in it, and in the cold season water-fowl are plentiful. The depression in which this lake is situated was probably part of an old bed of the Rämgangā, which now flows some distance to the west.

Bakhira Tāl (also called Badānch Tāl or Motl Jhil).-A lake on the eastern border of Basti District, in the United Provinces. Buchanan described it as the finest piece of fresh water he had seen in India. It covers a space of about 5 miles by 2, but is merely a shallow depression filled with water, the depth of which rarely exceeds a or 5 feet. On the west and south the fringe of marsh is small, but on the north a tract, which is regularly flooded in the mins, extends for 3 miles. To the east a low fen stretches for about 2 miles to the edge of the Rapri. The water in the lake is largely supplied by floods from this river, and would escape again but for an embankment along the eastern side. Fish are plentiful, and are caught in screens at the outlets of the dam or speared with a thin piece of bamboo tipped with iron. In the cold season the surface of the water is covered with wild-fowl. Boro or summer rice is largely planted in February or March round the edges of the lake.

Surahā Tāl.—A lake in Balliā District of the United Provinces, 4 miles north of Balliā town, situated in 25° 51' N. and 84° 11' E. Its shape is that of a thick crescent lying north and south, and its area varies from 13 square miles in the rains to over 4 during the dry season. Boro or summer rice is largely sown in the spring round the edge, and in the deeper parts of the lake the weed simār, which is used for refining sugar, grows largely. Fish are plentiful and are caught by sinking nets stretched on conical frameworks, the fish being speared as they try to escape. In the cold season teal and duck are common. The lake is drained by a channel called Katihār, which leads south to the Ganges; but when the Ganges rises, its waters flow back into the lake. In the cold season the Katihār is temporarily dammed to hold up

sufficient water for irrigation of the crops on the banks of the lake.

Ganges Canal, Upper.—The largest and most important irrigation work in the United Provinces, taking off from the right bank of the GANGES river and watering the Upper Doah. Two miles above Hardwar the Canges divides into several channels, the most westerly of which contains a large volume of water and, after passing Hardwar, remins the main stream at Kankhal. This channel is held up by a temporary dam which diverts the water into the canal head-works, where the amount admitted is regulated at the Māvāpur bridge. During the first 20 miles of its course four large torrents liable to sudden floods of extreme violence have to be crossed. Two of these are carried over the canal, the third is passed through it by a level crossing provided with flood-gates, and the canal itself flows on a magnificent aqueduct over the bed of the Solani. At mile as the canal throws off the Deaband branch (52 miles long); at mile 50 the Anupshahr branch (107 miles); and at mile 181 (at Nānū in Alīgarh District) it divides into what were originally called the Cawnpore and Etawah branches of the Ganges Canal. The Lower Ganges Canal now crosses these in their 32nd and 30th miles respectively, and from the points of junction they are considered to belong to it. The Upper Ganges Canal, on March 31, 1904, had 213 miles of main line, 227 miles of brauches, and 2,604 miles of distributaries.

In 1827 Captain De Bude proposed a scheme for utilizing the waters of the West Kall Nadl, along a drainage line constructed under native rule, to irrigate Meerut, Bulandshalir, and Aligarh Districts. The supply would, however, have been deficient and uncertain, and in 1836, at the suggestion of Colonel Colvin, the Ganges was examined near Hardwat. The next year a terrible famine, which devastated the Doab. increased the anxiety of Government to provide a satisfactory scheme, Major (afterwards Sir) Proby Cautley commenced a survey in 1839, and prepared a project which was warmly approved by the Court of Directors in 1841, the estimated cost being over a million sterling. In April, 1842, the actual works were commenced by opening the excavation between Kankhal and Hardwar. The work had, however, hardly begun when Lord Elienborough abruptly stopped it, on the grounds that money could not be spared and that the project was unsound from an engineering point of view. Subsequently the totally inadequate grant of z laklis a year was made.

Mr. Thomason, shortly after assuming office as Lieutenant-Governor, made a strong representation on the subject, and was informed that the main object of the canal was to be navigation, not irrigation. The grant was, however, increased by a lakh a year, and surveys were pressed on. A committee considered the arguments raised, and in 1847 reported favourably on the scheme. Lord Hardinge visited the head-works in the same year, and reversed the decision of his predecessor; an annual grant of 20 lakhs a year was sanctioned, with a promise of more if it could be usefully spent. The revised estimate of 12 million sterling was passed by the Directors in 1850, and the canal was opened in April, 1854. The works were, however, not complete; in particular, those at the Solani river gave way, and irrigation really commenced from May, 1855. Although the canal had been extraordinarily successful, owing to the genius of its projector, Sir Proby Cautley, ten years' experience pointed out defects in the system, and in 1866 a committee sat to examine the proposals which had been made. The result of their report was the expenditure of large sums on improvements and remodelling, the chief objects of which were to increase the supply, and to reduce the excessive slope of the channel by providing more falls. They also recommended a site near Rāighāt in Aligarh as a point from which a supplementary supply might be drawn, and this was carried out later in the Lower Ganges Canal.

The expenditure on capital account up to 1904 has been about 3 crores (£2,000,000 at present rate of exchange). The total area commanded by the canal at the end of 1903-4 was 3,800,000 acres in the Districts of Saharanpur, Muzassarnagar, Meerut, Bulandshahr, Aligarh, Muttra, Agra, Etah, and Mainpurt, of which 978,000 acres were irrigated. There is not much room for further increase. The canal also supplements the supply available in the Lower Ganges and Agra Canals (by means of the Hindan cut). The gross revenue first exceeded the working expenses in 1860-1. The net revenue has been larger than the interest charges on the capital expended since The most successful year of working was 1900-1. when the net revenue amounted to 114 per cent, on the capital In 1903-4 the gross and net revenue amounted respectively to 42 and 31 lakhs, the latter representing 10-3 per cent, on the capital outlay,

Special expenditure has been undertaken to facilitate navigation by constructing locked channels round falls, and by mising bridges; and hoats can pass from Roorkee to Campore. The portion of the Cawnpore branch from Nanu to Gopulpur, where it meets the Lower Ganges Canal, is kept open chiefly for navigation; and both the Ganges Canals are, in this respect, considered a single system. Operations are carried on at a loss; the receipts in 1903–4 were Rs. 11,000, while the expenditure was Rs. 19,000. Grain, cotton, oilseeds, and timber are the most important commodities carried; the rafting of timber is, however, decreasing. A small income is derived from mills worked by water-power at the falls, and the water-supply of Meerut city is raised by turbines worked by the canal.

Ganges Canal, Lower .- An important irrigation work designed to water the southern and eastern portion of the DOAD in the United Provinces. The canal owes its origin to the recommendations of the committee appointed in 1866 to examine the various projects for improving the UPPER GANGES CANAL. It takes off from the Ganges at Namura in Aligarh District, where a solid wall 3,800 feet long, with a section of to feet by 9, having forty-two weir-sluices, has been thrown across the river. At mile 25 the Fatchgarh branch, 61 miles long, is given off, and soon after, at mile 14, the canal is carried on a fine aqueduct across the Kali Nadi at Nadrai. The Rewar branch, 65 miles long, takes off 6 miles lower down, and at mile 55 the main canal meets the old Campore branch of the Upper Ganges Canal at Gopfilpur, and provides most of It then passes on to the Etawah branch of the Upper Ganges Canal and supplies it also, the main channel taking the name of the Bhogniour branch and terminating in Campore District. The canal was first opened for irrigation in 1878; in 1805 the Fatchpur branch, which is a continuation of the Cownpore branch, extending into Allahabad District, was commenced, and it was opened for irrigation in 1898. The total capital outlay on this canal to the end of 1903-4 was more than 4 crores. The system commands an area of 5,300,000 acres in the Districts of Etah, Mainpuri, Farrukhābād, Etāwah, Cawnpore, Fatehpur, and Allahābād, of which 821,000 acres were irrigated in 1903-4. The gross revenue has exceeded the working expenses since 1880-1, but the net revenue still falls, in some years, below the interest charges. In 1903-4 the canal carned 28 lakhs gross and 15 lakhs net, giving a return of 3.8 per cent. on the capital outlay. The main channel of 62 miles and 137 miles of branches are navigable. Navigation accounts are kept jointly with those of the Upper Ganges Canal.

Jumna Canal, Eastern .- An important irrigation work in

the Upper Doan of the United Provinces, taking off from the left or eastern bank of the Jumna. The canal is drawn from a branch of the river which divides soon after piercing the Siwaliks. The bed at this point has a rapid slope over boulders and shingle, and the supply is easily maintained by spurs. For some miles the canal itself flows over a similar bed. The main channel is 129 miles long, and there are 729 miles of distributaries and 447 of drains. Immediately after British occupation of the Doab, recurring famines pointed to the urgent necessity for irrigation, and surveys commenced in 1809, but work was not begun till 1823. Funds were limited, and the canal was first opened in January, 1830. Sir Proby Cautley's experience on this canal was of great assistance in carrying out the magnificent works of the more important Upper Ganges Canal. The line followed kept closely to that of an old canal of the seventeenth century. It has been much improved since it was opened, by providing falls (which also supply power for flourmills) to lessen the slope, and by straightening the channel.

The capital cost at the end of 1830-1 amounted to little more than 4 lakhs, which had increased to 46 lakhs by the end of 1903-4. The canal serves a rich tract in the Districts of Sahāranpur. Muzasiarnagar, and Meerut, lying between the Hindan and Jumna, and falls into the latter river a little below Delhi. It commands an area of 906,000 acres, and in 1903-4 irrigated 305,000 acres. The gross revenue has exceeded working expenses in every year except during the Mutny; and the net profits are usually high, amounting to 9-9 lakhs or 22 per cent. on the capital outlay in 1903-4, while the gross profits were 14-5 lakhs. Since 1837-8 the canal has not been used for navigation.

Agra Canal.—An important irrigation work in Northern India, which receives its supply from the right bank of the Jumna at Okhla, about 11 miles below Delhi. It protects a tract of country which suffered considerably in the past from famine. The weir across the Jumna was the first attempted in Upper India on a river having a hed of the finest sand: it is about 800 yards wide, and rises 7 feet above the summer level of the river. In 1877 a cut was made from the Hindan river to the left bank of the Jumna close to the weir; and water from the Ganges Canal can thus be used, when available, to supplement the supply in the Jumna, which sometimes falls short. The total length of the main canal in 1904 was 100 miles; of branches, 9 miles; of distributaries, 633 miles; of drainage cuts, 191 miles; and of other channels, 57 miles. The main

channel was completed in 1874, and irrigation commenced for the spring harvest of 1875. The total capital outlay to 1004 was 102 lakhs. The canal commands an area of 507,000 ncres, of which about 8,000 acres are situated in the Delhi and 210,000 in the Gurgaon District of the Punjab, and 228,000 acres in the Muttra and 151,000 in the Agra District of the United Provinces. The total area actually irrigated in 1903-4 was 260,000 acres; the gross and net revenues were 8-4 and 5-6 lakhs, and the net revenue amounted to 5-5 per cent, on the capital outlay. The gross revenue has exceeded the working expenses in every year since 1876-7, and the net revenue has been larger than the interest charges on capital since 1896-7; but taking the whole period of existence of the canal, the interest charges have exceeded the net revenue by The total length open for navigation was 125 nearly 14 lakhs. miles, including two branches to the Jumna at Muttra and Agra, o and 16 miles in length, which cost 1-8 and 4-9 lakhs respectively, and were made especially for this purpose. The traffic is, however, small, and in 1903-4 only 14,221 tons of goods. valued at Rs. 90,000, were carried. The navigation receipts were Rs. 1,600, and the expenditure was Rs. 6,500. Navigation was finally stopped in 1904, as it interfered with irrigation, which is the prime object of the canal.

Agra Province.—The Subah or province of Agra was one of twelve into which the Mughal empire was originally divided by Akbar. It took its name from AGRA CITY, the imperial capital, and both city and province were subsequently called Akharābād. The Sūbah is described in the Ain-i-Akbarī as 175 kes long from Palwal (now in Gurgaon District) to Ghātampur (Cawnpore District), and too kos broad from Kanauj (Farrokhābād District) to Chanders (Gwalior State). It thus included, in the present United Provinces, the whole of the Agra Division, with Aligarh and half Bulandshahr District to the north, and most of Cawnpore, Jalaun, and Jhansi District to the east and south. On the west it extended over parts of the present States of Jaipur, Alwar, Bharatpur, Karauli, and Dholpur in Rājputāna, and Gwalior in Central India. The province nominally survived till the end of the eighteenth century, though Rajputs, Jats, Marathas, and the Pathans of Farrakhābād had been the actual rulers for nearly a hundred years. The eastern portion, which is now British territory, was acquired, partly by cession from the Nawab of Oudh in 1801. and partly by conquest from the Marāthās in 1803, and was at first included, with other areas acquired at the same periods, in

the Presidency of Bengal. Administrative difficulties arose, awing to the distance of these outlying tracts from the seat of Government at Calcutta; and after various temporary measures a Board of Revenue and a Sadr Diwani and Nizamat Adalar (Chief Civil and Criminal Courts) were constituted in 1841 for the so-called Western Provinces, entirely independent of the Board and Courts at Calcutta. A few years later a Presidency of Agra was formed by the statute 3 and 4 William IV, cap. 85. which comprised the whole of the present United Provinces. except Oudh and parts of Bundelkhand, and a Governor was appointed. The scheme was, however, never completely carried out; and a Lieutenant-Governor of the North-Western Provinces, which included the same area, was appointed in 1836 under the statute 5 and 6 William IV, cap. 52. By Act VII of 1902 a change was made in designation, and the North-Western Provinces and Oudh became the United Provinces of Agra and Oudb. The term 'Agra' is now applied (section 4 (4). United Provinces Act I of 1904) to the territories formerly known as the North-Western Provinces.

Baiswara.-The name given to several tracts of country in various parts of the United Provinces, from the fact that they belong or have belonged to the Bais Raiputs. important of these includes a number of parganas (traditionally twenty-two) in the eastern half of Unao District, the western half of Rae Barell, and the extreme south of Lucknow, with a total area of nearly 2,000 square miles. Rainuts first became of importance here in the thirteenth century, when two of them, named Abhai Chand and Nirbhe Chand (who are supposed to have come from Mungi Patan in the Deccan), rescued the Gautam Rani of Argal, who had been attacked by the Muhammadan governor of Oudh. Chand died of his wounds, and the Rājā of Argal gave his daughter to Abhai Chand, who settled at Daundia Khera. Tenth in descent from him was Tilok Chand, who lived about 1400, and extended the area held by the Bais to the limits described above. Legends are numerous about Tilok Chaud, who became the greatest noble in Oudh, and opposed the Muhammadans, as did his immediate successors. According to one account, he defeated the Chauhan Raja of Mainpuri, who thereupon gave him a daughter to wife, though the Bais were reckoned inferior to the Chauhans. In the eighteenth century the bravery of the chiefs of Baiswārā gained the admiration of Salidat Khān, the founder of the Lucknow dynasty. Under the Nawabs Baiswara formed a separate administrative division.

as described above. The Baiswārā Division formed by the British Government after annexation consisted of Rāe Barelī, Partābgarh, and Sultānpur, the last two Districts having nothing to do with the real Baiswārā. The tract has given its name to a dialect of Eastern Hindī, which differs very slightly from other dialects of that language. Its inhabitants still hear a reputation for bravery. The Bais chieftain, Drighijai Singh, in 1857, saved the four survivors of the Cawapore massacre from their pursuers.

[Elliott, Chronicles of Oonao, p. 66 et seq.]

Bundelkhand (British).—A tract of country in the United Provinces, which includes the Districts of Jālaun, Jhānsi, Hamīrpur, and Bāndā, with those parts of Allauānād which lie south of the Jumna and Ganges. It thus consists of an area of about 11,600 square miles, lying south-west of the Jumna from its junction with the Chambal. The name is taken from that of the Bundelä Thākurs, the most important clan inhabiting it. The word Bundelā is popularly derived from būnd, 'a drop,' in allusion to the attempted sacrifice of himself by the founder of the clan, a Gaharwār. His son was born from the drops of blood which fell on the altar of Vindhyabāsinī Devī at Bindhāchal (see Mirzāpur City). Other derivations are from Vindhya, or from bāndi, 'a slavegirl.'

Physical features.

The northern range of the Eastern Vindhyas called Bindhachal cuts across the south of Ihansi, Banda, and Allahabad, with many outlying hills, but nowhere rises above 2,000 feet. The base of the hills rests on gness, while the hills themselves are of sandstone, overlaid south of these Provinces by basalt, the Deccan trap, which has also spread north in dikes. From the hills numerous streams flow north or north-east towards the lumns, of which the most important are the BETWA, DHASAN, Birmā, Ken, Bāghain, Paisuni, and (Southern) Tons. The geological formation of Southern Bundelkhand has greatly influenced the soil of the alluvial plain lying between the hills and the Jumna. This contains a large proportion of disintegrated trap, which gives it a dark colour; it is especially adapted for growing wheat, and is known as 'black soil,' and in the vernacular as mar. A variety of lighter colour and differiou qualities is known as kābar. From Jhānsi to Lalitpur a soil called rakar is found, the prevailing colour of which is largely red or yellow, owing to the presence of iron in the disintegrated gneiss. Another soil of red colour is formed from disintegrated sandstone in situ, and though productive is easily exhausted.

as it is very shallow. Black soil is retentive of moisture, but requires irrigation in unfavourable seasons, and in dry weather opens out in large cracks. During the mins unmetalled reads are almost impassable owing to the tenacious mud formed on them. A native proverb says that kābar is too wet to plough one morning, and too dry and hard to plough the next day.

In Banda, as in other tracts crossed by the Vindhyas, many History. varieties of stone implements have been found, the relies of prehistoric man. The earliest traditions connected with British Bundelkhand relate that it was ruled over by Gaharwar Rajputs. Nothing certain is known of these; but some of the numerous tanks formed by throwing embankments across the narrow ends of valleys are attributed to them, namely, those where the embankments are formed of uncut stone. The largest is the Bijainagar lake, situated about three miles east of Mohoba. According to tradition the Gabarwars were followed by Parihars, who were in turn succeeded by Chandels. a clan which has left many memorials of its rule. Nothing but the name is known of Nanika or Nannuka, described in several inscriptions as the founder of the dynasty; but he probably flourished in the first half of the ninth century a.p. The fourth Raja, Rahila (circa 890-910), seems to have extended his dominions, and he constructed the Rahilya Sagar ('lake') at Mahobā, with a fine temple, now in ruins, on its embankment. The earliest dated inscriptions are those of Dhanga (950-99), who appears to have been the most powerful of the early Chundels. He assisted Jaipal of Lahore in his unsuccessful invasion of the Ghazni kingdom in 978, and according to his inscriptions was recognized as overlord by the rulers of most of Central, Southern, and Eastern India; but this is clearly an exaggeration. His successor, Ganda (999-1025), who appears as Nanda Rai in the Muhammadan histories, also assisted Jainal of Lahore against Mahmud of Ghazni; and according to Firishta he killed the king of Kanayi in 1021, but surrendered to Mahmud in 1023, when he was in possession of fourteen forts. Kirtti Varmma I, the eleventh king (1049-1100), seems to have been reigning when his son, Sallakshana, conquered Karna, king of Chedi or Southern Kosala. He is also the earliest Chandel whose coins, copied from those of the Chedi kings, are known. Tradition assigns to him the construction of the Kirat Sagar at

<sup>&</sup>lt;sup>4</sup> J. Kivelt-Camac, J.A.S.B., 1883, p. 221, and J. Cockbarn, ibid., 1891, pt. iii, p. 21.

Mahoba, and some buildings at Ajaigath. Madan Varmma. the fifteenth king (1130-65), was a vigorous ruler, who extended the sway of the Chundels. He again subdued the Chedi kingdom, which had become independent, and is said to have conquered Gujarāt. His immediate successor, Paramardi Deva or Parmal (1165-1203), is still remembered, as during his reign Prithwi Raj of Delhi conquered Bundelkhand in 1182, and the Chandel power received a second blow in 1203, when Kuth-ud-din raided the country. Popular tradition holds that Paramardi lost his kingdom through disobeying the four conditions laid on the founder of the race-not to drink wine, not to put Brāhmans to death, not to form improper marriage connexions, and to preserve the name of Varmma. The Chandel dominion by between the Dhasan on the west, the sources of the Ken on the south, the Jumna on the north, and the Vindhya Hills on the east. At times it extended as far west as the Betwa. Kalinjar, Khajrāho, Mahobā, and Ajaigarh were its great fortresses. In inscriptions the country is sometimes called Jejāka-bhukti, which has been contracted into lishoti, from which the lighotia Brāhmans, who still inhabit the tract, take their name. The kingdom of Chi-ki-to, described by Hiuen Tsiang in the seventh century as lying north-east of Ujjain, has been identified with Jelaka.

After the Musalman conquest the Chandels became petty Rajas. The country was held for a short time by Mewatts, probably in the first half of the thirteenth century, and then by Bhars. Tradition shows the latter as owning a large part of the Eastern Doab and Central Oudh, and the Persian historians record the conquest by Ulugh Khan, in 1248, of a king Dalaki-wa-Malaki, reigning from Kara to Rahinjar. The name appears to be a compound of two names, Dal and Bal, which are known from tradition. The Bhars are locally said to have been driven out by a Muhammadan, and replaced by the Khangars, formerly servants of the Chandels.

The Bundeläs, The Bundeläs claim to be descended from Pancham, a Gaharwar who attempted to sacrifice himself, as noted above; but their real origin is obscure. They probably began to acquire power in the fourteenth century, first settling at a place called Mau, which has not been definitely identified, and then taking Kälinjar and Kälpf; but some writers place them a century earlier. As their power increased, chiefly in western Bundelkhand (Central India), the Bundeläs constantly came into collision with the Muhammadans. About 1507

Rudra Pratap became chief, and is said to have been formally appointed governor by Habar. From his sons most of the great Bundelli families derive their descent. In 1545 Sher Shah invaded Bundcikhand, and lost his life while besieging Kālinjar, Kleat Singh, the last Chandel Rājā, was put to death by Islam Shah, who took the fort; but it again fell into the hands of the Bundelis, till in 1369 Akbar got possession The Bundelüs, who were now divided, still held considerable power and were often successful in resisting the royal troops. Bir Singh Deo, who ruled at Orchha, and commenced the fort at Jhansi, incurred the special anger of Akbar by planning the murder of Abul Fazl at the instigation of prince Salim, afterwards the emperor Jahangir; and though he remained in favour during the reign of the latter, he rebelled against Shah Tahan, and his territory was confiscated. The central part of Bundelkhand was ruled by Champat Rai He joined in Bir Singh Dec's revolt, and though attacked by forces from Agm, from Allahabad, and from the Deccan, maintained a guerrilla warfare near the He finally accepted service under the emperor and obtained the pargana of Kunch in Jalaun, and, in return for assistance given to Aurangzeb at the battle of Samogarh, received further grants, but lost favour and was assessmated by his wife's relations. Champat Rai's son, Chhatarral, soon became chief leader of the Bundeläs, and in a few years held the whole of western Bundelkhand, and gradually extended his power, taking Kālinjar and most of what is now British Bundelkhand. He defeated the imperial troops again and again, and in 1707, on the accession of Bahadur Shah, was confirmed in all the acquisitions he had made. In 1723 Muhammad Khān Bangash of Farrukhābād, while governor of Mālwā, was ordered to bring the Bundelas to order; and in 1727, after his transfer to Allahabad, he attacked them again, laying waste the whole country. Unable to resist the invasion, Chinters 1 called in the Marathas in 1729, and Muhammad Khān barely escaped with his life, glad to promise never to enter Bundelkhand again. When Chhatarsal died, about 1734, he bequeathed one-third of his territory (Jhansi and Jalaun) to the Macathas, and the rest was divided among his heirs. Bundelkhand was valuable to the Marathus, as it lay on the road from the Deccan to the Doub, and the Peshwa Bait Rao made constant use of it, the Bundel55 binding themselves by treaty to co-operate with him. In 1747 the Peshwä further extended his possessions in this region by a fresh treaty, and

nearly twenty years later troops from here assisted Shuiā-uddaula of Oudh in his unsuccessful struggle with the English. British troops first entered Bundelkhand in 1776, when war broke out with the Marathas after the Treaty of Purandhar. but they passed through without retaining any hold on the country. The Bundelas then succeeded in freeing themselves to some extent from the Maratha power, A Gosain or religious mendicant named Himmat Bahadur, who had already commanded troops, now began to rise into power; and he combined with All Bahadur, an illegitimate grandson of Bail Rao, who was in command at Gwalior, to crush the Bundela chiefs. A long struggle took place between 1700 and 1802. when Ali Bahadur died while attempting to take Kalinjar. By the Treaty of Bassein in 1800 the Peshwa ceded territory to the British, some of which was afterwards exchanged for part of the Maratha possessions in Bundelkhaud. Another portion of these possessions was acquired under a later treaty. The subordinate Maratha chiefs, however, refused to recognize these treaties: and Shamsher Bahadur, son of Ali Bahadur, proceeded to lay waste Bundelkhand and the British Districts of Mirzāpur and Benares. Himmat Bahādur then abandoned the Marathas and came over to the British, who granted him a large tract along the Jumna between Allahabad and Kalpi. British troops co-operated with Himmat Bahadur and drove Shamsher Bahādur across the Betwā, and in 1803 took Kālpī. Shamsher Babādur became titular Nawāb of Bāndā with a pension of four lakhs, and by the end of 1804 the country was fairly quiet. The fort of Kalinjar was taken in 1812. Subsequent additions to British territories took place by lapse, and Thansi city was finally acquired from Sindhia in exchange for Gwalior fort and Morar in 1886.

Popula-

The population of British Bundelkhand full from 2,693,000 in 1891 to 2,456,000 in 1901, a decrease of nearly 9 per cent. Excessive rainfall and cloudy weather in the early years of the decade brought on rust, which damaged the spring crops and caused great loss to the people. The failure of the rains in 1895 and 1896 resulted in severe famine, and a virulent cholera epidemic broke out. The density is only 212 persons per square mile, being less than one-half the density in the United Provinces generally. Of the total population, 2,297,000, or more than 93 per cent., are Hindus, and only 143,000, or less than 6 per cent., are Muhammadans, who form 14 per cent of the population in the United Provinces as a whole. British Bundelkhand extends to the jungles of Central India, and its

inhabitants have a strong infusion of Dravidian blood. The principal jungle tribes are the Kols, Khangars, and Saharias, who have become nominally Hinduired. The change is, however, more noticeable in regard to social customs, such as marriage rules, than in religious beliefs, which continue strongly animistic. A few estates are still owned by Marathas, but the effects of their rule have almost disappeared. In Banda and Allahabad the Bagheli and Awadhi dialects of Eastern Hindi are spoken, while in Hamirpur, Thansi, and falaun the vernacular is the Bundelt dialect of Western Hindt.

While in the United Provinces, as a whole, the autumn Agriculgrops cover an area only about 16 per cent, greater than the ture. spring crops, in Bundelkhand they are nearly double. one-third of the autumn crop is jovar and one-seventh cotton. and from 50 to 80 per cent. of the spring crop is gram. These proportions vary according to the seasons, and after good min the rabi area is largely increased. Irrigation from wells is difficult owing to the low spring-level, and the storage tanks made by closing valleys do not command large areas. There is only one canal, drawn from the Betwa, a protective work which chiefly serves Inlaun. In 1903-4, only about 4 per cent. of the cultivated area was irrigated, compared with one-third for the United Provinces as a whole. Bundelkhand is thus peculiarly liable to suffer from deficient rainfall. A canal from the Ken to serve Banda District has been commenced: and schemes to increase the water available in the Betwa Canal, which is at present insufficient for the demand, and to open other sources are under consideration. Other calamities are the prevalence of rust after a wet or cloudy winter, and the growth of a weed or grass called kins, which spreads rapidly and can only be enadicated with difficulty. Famine has thus been severely felt again and again; and the failure of the rains in 1806, which followed successive bad years, was especially disastrous.

The liability to good and bad cycles of agricultural condi-Special tions is coupled with peculiarities in the nature and disposition legitlaof the people. Though perhaps not more extravagant than the inhabitants of the rest of the United Provinces, they are distinctly less provident; and the careful cultivation and saving habits of the Jats, Kurmis, Kachhis, Muraos, and Koiris of other Districts are not found in Bundelkhand. This may be traced partly to the liability to vicissitudes already referred to. and partly to the effects of the revenue system of the Marathas, who possessed the tract before the British. The most common

method was to assess a village annually at fixed rates on soil or crops, and to make deductions for bad seasons, after a valuation of the crops of each holding. This was a system of rack-renting, as the rates were the highest which could be paid in a good season, and it is obviously not a system under which either the standard of comfort or the prosperity of a community would be likely to increase. Except in part of the Lalitpur tahsil of Jhansi, the land was chiefly held by individual cultivators, and talukdārs or large holders of land were British rule conferred proprietary rights on the village headmen who were found managing land and collecting rents. and on a few relations of these who shared in the headman's special holding or reduced rent. Instead of the demand being regulated by the season, a rigid system of collecting a fixed amount was introduced; land became a transferable security, and the owners, unaccustomed to their new conditious, got freely into debt, and lost their holdings. It was estimated that in Banda, most of which became British territory early in the nineteenth century, an aggregate equal to twice or thrice the area of the District changed hands during the next forty years. Most of Ihansi District was acquired later, when more experience had been gained in revenue administration, 1 and sale of land was not allowed till 1862; but even here sufficient allowances were not made. Some landowners had been in debt since the Maratha rule. After the Mutiny, revenue was collected from many from whom it had 'already been extorted by the Orchha or Jhansi rebels. In 1867 the crops failed, and in 1868-9 there was famine and great loss of cattle. In 1872 many cattle were lost from murrain. Although the settlement had appeared light, it became necessary to re-examine the condition of the District in 1876. After much discussion the Jhansi Encumbered Estates Act (XVI of 1882) was passed, and a Special Judge was empowered to examine claims and reduce excessive interest. The sule of a whole estate operated as a discharge in bankruptcy to extinguish all debt due. Many estates were cleared by the sale of a portion only. A striking feature of the proceedings was the rapid increase in the value of land.

The experiment, though apparently successful, had no lasting effect. Bundelkhand suffered from another series of bad years, commencing with rust and blight in 1892-3, excessive tain in 1894, and drought in 1895 and 1896. Even in Bändä, where the last settlement was made, not on actual 'assets,' but on a fair average area of cultivation, the population decreased by

10% per cent, between 1891 and 1901. Debt had become serious in all parts of the tract. The Jhansi legislation has therefore been revived, with modifications suggested by the experience gained, in (United Provinces) Act I of 1003, which has been applied to the whole of British Bundelkhand. In addition to this, two new safeguards have been adopted. By (United Provinces) Act II of 1903 permanent alienations of land are forbidden where the alienor is a member of one of certain agricultural tribes, except in favour of another member of the same tribe, or where both parties reside in the same District and are both members of agricultural tribes. Except where permanent alienation is allowed, mortgages and leases are subject to the condition that possession of the land involved cannot be transferred for more than twenty years. Sales in execution of decrees passed by civil or revenue courts (other than those of the Special Judges who have been appointed) are forbidden, but such decrees may be liquidated by usufructuary mortgages for terms not exceeding twenty years. Large reductions of revenue have been made, and the assessment of all parts of Bundelkhand is being revised. The new demand, instead of being fixed for thirty years, will be liable to further revision whenever the cultivated area fluctuates considerably.

[V. A. Smith, 'History of Bundelkhand,' Journal, As. Soc., Bengal (1881), p. 1; A. Cumingham, Arch. Survey Reports, vols. vii and xxi; C. A. Silberrad, Journal, As. Soc., Bengal (1902), p. 99; E. G. Jenkinson, Settlement Report of Juansi (1871); A. Cadell, Settlement Report of Bunda (1881).]

Doub ('two rivers').—This name is commonly applied to the land between the confluence of any two rivers, but especially to the tract between the Ganges and Jumpa in the United Provinces, extending from the Siwaliks to the junction of the two rivers at Allahabad. The central and lower portions from Etawah to Allahabad are often termed Antarced, the meaning of which is said to be either 'between the waters' or 'within the hearth.' Antartedt is also applied to the dialect of Western Hinds used in the central portion, a variety of Braj. The Doab includes the Districts of Sahāranpur, Muzassarnagar, Meerut, Bulandshahr, Aligarh, parts of Muttra and Agra, Etah, Mainpuri, the greater part of Etawah and Farrukhabad. Campore, Fatchmer, and part of Allahabad. Naturally a rich tract of alluvial soil, it has been irrigated by three fine engineering works, the Upper Ganges, Lower Ganges, and Eastern JUMMA CANALS; and much has been done to improve the drainage of the land. This is the greatest wheat-producing area in the United Provinces; and it presents an almost unbroken sheet of cultivation, varied only by ravines on the banks of the Jumna and other rivers, and by occasional narches of barren usar (saline) plain or dhak (Butea frondosa) imgle. The contrast between this condition and the state of the Doab at the end of the eighteenth century is striking. In 1794-5 Mr. Twining, a servant of the Company, who travelled from Fatchgarb to Agra, Muttra, Delhi, and back across Aligarh, described most of the tract as a sandy waste. Although before British rule famine repeatedly devastated this area, canal irrigation has now rendered the greater part of it safe. 1846-7 the peasants of the Upper Doab were able to hold stocks of grain, while almost every other part of the United Provinces was importing. The Fatehpur branch of the Lower Ganges Canal, opened in 1898, will do much for the three Districts nearest the confluence of the Ganges and Jumna. Camppore, the largest manufacturing town in the United Provinces, which is also an important collecting and distributing centre, Hathras, Meerut, Saharanpur, Allahabad, and Etāwah are the chief commercial marts. Small thriving towns are numerous, and a network of milways crosses the area in every direction, providing excellent means of communication with all parts of India. The Doab, though it has lain in the track of all invaders from the north, was never an historical entity, and the history of its different portions will be found in the accounts of the Districts composing it.

Hindustan.—A vaguely-defined area, sometimes applied to the whole of India north of the Vindhyas, in contradistinction to the Deccan (Dakskin, 'south'), which lies south of Hindustan, in this sense, is bounded on the north by the Himālayas, on the east by Assam, on the south by the Vindhyas, and on the west extends into the Punjab and Rājputāna. It accordingly comprises the administrative tracts forming the Lieutenant-Governorships of Bengal and the United Provinces, together with the eastern portions of the Punjab and Rājputāna, and most of Eastern Bengal and Assam. In Muhammadan histories the term is used for a smaller area, comprising the east of the Punjab and Rajputana and the greater part of the United Provinces, Thus Abul Fazi treated the Province of Lahore as outside of Hindustan. During the eighteenth and first half of the nincteenth centuries the term Hindustan was loosely employed by geographers to include the whole of India. The name means the 'place of the Hindus'; and it has been applied to the lingua franca of Northern India, called Hindustāni or Urdū, which is a dialect of Western Hindi, with a greater or less admixture of Arabic and Persian vocables, according to the taste of the speaker.

Kosnla (from Kushala, 'happy').—Two tracts of this name are known in Hindu literature. That north of the Vindhyas corresponded roughly with Oudh. In the Ramayana it is the country of Dasamulia and Rama, with its capital at Ajodhya. and it then extended to the Ganges. It was part of the holy land of Buddhism, and in Buddhist literature kings of Kosala ruled also over Kapilavastu. Sravasti, the site of which is disputed, was the capital of Uttara Kosala, the northern portion over which Lava, son of Rama, ruled after his father's death. Southern or Great Kosala (Dakshina or Maha Kosala), which fell to Kusa, the other son of Rama, lay south of the Vindhyas. In the seventh century Hinen Tsiang describes it as bounded by Ujjain on the north, Maharashtra on the west, Orissa on the east, and Andhra and Kalinga on the south. thus lay in Chhattisgarh about the upper valley of the Mahanadi and its tributaries, from Amarkantak on the north to Kanker on the south, and may at times have extended west into Mandla and Balaghat Districts, and east into Sambalpur. From about the year 1000 the tract was absorbed in a new kingdom called Chedi (eastern).

[For Northern Kosala, see Lassen, Ind. All., vol. i, p. 129, and authorities quoted there; Rhys Davids's Buddhist India, passim. For Southern Kosala, see Cunningham, Archaeological Survey Reports, vol. xvii, p. 68, and map; and Coins of Mediaeval India, p. 73.]

Madhya Desa ('the middle country').—At present this name is not infrequently used by Hindus for the Ganges and Jumna Doña. It had a more extended meaning formerly; and in early times it probably included the tract lying between the place (at Bhatner in Rājputāna) where the Saraswatī disappears on the west and Allahābād on the east, stretching to the Himālayas on the north and the Vindhyas on the south. This was the area within which Brāhmanism had its rise and full development, and it is still regarded as a holy land of Hinduism. But according to Varāha Mihita, the Sanskrit geographer of the sixth century a.d., the Madhya Desa extended as far west as Mārwār, while the Yūmunas, or people living on the banks of the Jumna, were partly in this and partly in the northern country, and the Vindhyas are wholly excluded. Alberūni explained it as the country lying round Kanauj.

[Lassen, Ind. All., vol. i, p. 92; Fleet, Ind. Ant., 1893, p. 169.]

Magadha.—This ancient kingdom is referred to in both the Ramayana and the Mahabharata. The greater part of Magadha proper was situated in Bihar south of the Ganges, with its capital first at Rajagriha and afterwards at Pataliputra (Pama); but it also extended into the east of what is now the United Provinces, where it marched with the kingdom of Benares. Magadha was the scene of many episodes-in the life of Gautama and is important in the history of Buddhism. About the same period Mahavira founded the cognate sect of the Jains. At the time of Alexander's invasion, the kings of Magadha appear to have been recognized as paramount over the greater part of the United Provinces as well as over Bengal. Their dominion was still further extended by Chandragupta Maurya and his grandson, the famous Asoka. The Maurya dynasty declined after Asoka's death, and Magadha was conquered about 150 B.C. by a king of Kalinga: but towards the end of the fourth century A.D. a new line of Gupta kings renewed the glories of Magadha, and gradually spread westward to Allahābād, Kanauj, and even to Gujarāt, while Samudra Gupta temporarily conquered part of the Deccan. When the Gupta empire broke up early in the sixth century, Magadha was subdued by the Chalukya king Kirttivannan (I), but again became a small kingdom, still ruled by an eastern branch of the Guptas. Inscriptions give the names of eleven kings, the eighth of whom was reigning in 672. The kingdom was absorbed in the dominions of the Pal dynasty of Bengal in the ninth century. In 1197 the last of the Pals was dethroned by Muhammad Bakhtiar Khilji, and the kingdom of Magadha was included in the empire of the Slave kings of Dellii. Magadha formed part of the Jaunpur kingdom for a time, and its later history merges in that of Bihar. Varaha Mihira, the Sanskrit geographer of the sixth century A.D., mentions' Magadha as situated in the eastern division of India between Kosala and Mithila (Tirbut). The kingdom has given its name to a tribe of Brāhmans called Māgadha or Sākaldwip Brāhmans, and also to the Magahiyā subdivision of the lowcaste Doms. Like other kingdoms cast of MADRYA DESA, its inhabitants were held in low esteem, and this feeling has survived to the present day.

- Mewat.-An ill-defined tract lying south of Delhi, and including part of the British Districts of Muttra and Gurgaon. and most of the Alwar and a little of the Bharatpur States. It takes its name from the Meos, who appear to have been originally the same as the Minas of Rajoutana, but say that they have not intermarried with these since the time of Akbar. The origin of the name Meo is disputed, some deriving it from Mewat, which is said to be the Sanskrit mina-rafi, 'rich in fish,' while the Meos themselves derive it from makeo, a word used in driving cattle. Mina is said to come from Amina Meo or 'pure' Meo, a term applied to those who did not become Musalmans. The Hindu Meos and Minas claim to be Rainuts, but are not so regarded by other Hindus, and it is certain that outsiders have often been admitted in the past. Their tribal constitution varies in different places. The Muhammadan Meos call themselves Mewātīs. In 1901 there were 10.516 Mens and Minas in the United Provinces, chiefly in the Districts of Meerut (016), Bulandshahr (4.745), Agra (006), Bijnor (1,263), Budaun (884), and Morādābād (1,070); and 51,028 Mewatis, chiefly in the Meerut (22,576), Agra (7,316), and Rohilkhand (16,129) Divisions. The large number in Robilkhand, which was never part of Mewat, is explained by a migration owing to famine in Mewat in 1761-2. The Meas of Raiputana numbered 168,506, or nearly 2 per cent. of the total population. Practically all are Muhammadans, and they are found in thirteen out of eighteen States. In Alwar there were 173,142, or over 13 per cent, of the population; and in Bharatnur 51,546, or 8 per cent. The Khanzada subdivision is represented by 9,317 members, most of whom are in Alwar. The Mewatts have preserved many Hindu customs, such as exogamous rules and Hindu festivals.

According to tradition, the Meos first crossed the Jumna in the period of anarchy which succeeded the invasion by Mahmud of Ghazni in 1018-9. The great Rājput clans of Bulandshahr and Etāwah state that they dispossessed the Meos at the order of Prithwi Rāj of Delhi towards the end of the twelfth century. Throughout the period of Muhammadan rule the Meos were the Ishmaelites of their own country and of the Upper Doah, though harried again and again by the kings of Delhi, from Nāsir-ud-dīn Mahmūd (1259) to Bābar (1527). During the troubled times of Timūr's invasion (1398) Bahādur Nāhar, who founded the subdivision of Mewātts called Khānzādas, members of which were, for many years, rulers of Mewāt, was one of the most powerful chiefs in this part of India. Under Akbar the

tract was divided between the sarkārs of Alwar and Tijāra in the Sūbak of Delhi. The rule of the Mewātīs was subsequently challenged by the Jāts, who had already risen to importance before the death of Aurangzeb in 1707, and consolidated their power in Southern Mewāt in the first half of the eighteenth century; and from this time the history of Mewāt merges in that of Alwar and Bhamtpur. The Meos and Mewātīs, however, retained their character for turbulence; and towards the end of the eighteenth century travelling in the Upper and Central Doāb was unsafe owing to armed bands of Mewātī horsemen. They gave much trouble to Lord Lake's forces in the Marāthā War of 1803, while in the Mutiny they and the Gūjars were conspicuous for their readiness to take advantage of disorder.

[W. Crooke, Tribes and Castes of the North-Western Provinces and Oudh, vol. iii, p. 485 et seq., where full authorities are quoted.]

Physical aspects.

Oudh (Awadh)1 .- A British Province, forming part of the UNITED PROVINCES, lying between 25° 34' and 28° 42' N. and between 79° 41' and 83° 8' E. Area, 23,966 square miles. Population (1901), 12,833,077. The name is a corruption of that of the ancient city of Ajodhyā (Ayodhyā), which became the seat of a local governor under the early Muhammadan Oudh is bounded on the north by the State of Nepāl, and on all other sides by the Province of Agra. The Gorakhpur and Benares Divisions lie on the east, the Barcilly and Agra Divisions on the west, and the Allahabad Division on the south. The river Ganges forms the greater part of the south-western boundary. Oudh includes portions of two of the great natural divisions of Upper India. The three northern Districts of Kherf, Bahraich, and Gonda stretch up into the submontane tract lying below the Himālayas, while the remainder of the Province lies in the central portion of the Gangetic plain. The northern boundary of Bahraich and Gonda runs for 60 miles along the low hills which mark the first rise above the level of the plain; but the submontane tract or tarai is chiefly distinguished by its greater slope and excessive moisture, due to a heavier minfall and the drainage from the outer ranges of the Himālayas. In the northern portion of the Province there are large areas of forest land. Goologically, the whole of Oudh is classified as Gangetic

<sup>1</sup> This article deals only with matters in which Outh differs from the rest of the UNITED PROVINCES, to the article on which reference should be made for other details.

alluvium. No rock or stone is found except kanbur (npdular limestone), which is used for metalling roads. Gold is obtained in very small quantities by washing sand in the rivers in the north of the Province. Salt was extensively manufactured during native rule, but the influstry has been prohibited for many years. The flora is described in the article on the UNITED PROVINCES.

The country slopes from north-west to south-east, and the River drainage follows the same line, being divided into two great and lakes. tiver systems, those of the Gogna and Ganges, which ultimately unite in Bengal. The Province may thus he divided

into two tracts separated by the Cogra. On the north-east the districts of Bahraich and Gonda form a triangular area, a portion of which is drained by the Rarri, with a course roughly parallel to that of the Gogra, into which it falls in Gorakhnur District, while the greater part of the drainage is carried directly into that river. The rest of the Province is roughly rectangular in shape, and lies between the Gogra and the Ganges. Through the centre of this portion flow the GUMTI and its southern tributary the SAL which carry off most of the drainage into the Ganges. It is only in the northern Districts of Kheri and Sitapur that the Gogra obtains an increase to its volume through the Sarpa and its branches. The numerous shallow ponds or jittle, of which the DAHAR LARE is the most important, form a more valuable source for

The general aspect of the Province, except during the hot Scenery. season when the land is hare, is that of a rich expanse of waving and very varied crops, interspersed with numerous ponds or shallow lakes, mango groves, and bamboo clumps. The villages lie thickly scattered, consisting of low cottages surrounded by patches of garden-land. The dense foliage of mango plantations marks the site of almost every little homestead. Mahus (Bassia latifolia), plantains, guavas, and jackfruits add further beauty to the village plots. The scenery, as a whole, has few claims to attention, except 50 far as trees and water may occasionally combine to produce a pleasing effect; but the varied colouring of the ripe crops, the sky, and the groves or buildings, often charm the eye under the soft lare of a tropical atmosphere.

The legendary accounts of Oudh centre round Ajodaya or History. Awadh, the city from which the Province takes its name. This Legends. was the expital of Kosala, the kingdom of Dasaratha of the Solar race, futher of Rama, from which the hero went forth into

irrigation than the rivers.

exile with his wife Sitā and his brother Lakshmana, and to which he returned in triumph after the defeat of Rāvana, king of Ceylon. Many places in Oudh are visited by pilgrims on appointed days as connected with the story. After the death of Rāma the kingdom was divided into Northern Kosala, ruled by his son, Lava, at Srāvastī, and Southern Kosala, ruled by another son, Kusa. No approximate date can be assigned to whatever may be historical in the story of the Rāmāyana.

Buddhism.

In the Buddhist literature of the centuries immediately before the Christian era, Srāvasti figures as an important place at which Gautama spent many years. Its exact site is disputed, but the kingdom of which it was the capital certainly included part of Oudh north of the Gogra. The rest of the province still preserves many remains of the Buddhist faith, which have not been thoroughly examined. An inscription of the twelfth or thirteenth century found at SET MATTET in the Gondā and Bahraich Districts shows that Buddhist tenets were held as late as that date, but the Chinese pilgrims in the fifth and seventh centuries lament that the faithful were even then few.

Mediaeval period. Little more is known of Oudh up to the rise of the Gupus of Magadha, who gradually extended their dominions westward from Patna in the fourth century a. D., and according to the Purānas took Sāketam or Ajodhyā. The once populous tract north of the Gogra relapsed into jungle, and the ancient city of Srāvastī was deserted by the seventh century.

According to tradition, the Tharus who are still found in the tarm descended from the bills in the eighth or ninth century; and legend tells of a line of Somavansi kings, the last of whom, Suhil Deo, fought with Saiyid Salar. In these dark ages, while the Rajput clans were rising into importance, Western Oudh must have been subject to the rulers of Kanauj or Katehr, and Eastern Oudh to Benares, till this was absorbed in the great kingdom of Kanauj.

Rarly Muhammadaa period. The raid of Mahmud Ghaznivid, in 1018-9, extended from Kanauj through part of Southern Oudh; and there are many tombs in the province, said to be those of warriors who fell in the expedition of his canonized nephew, Saiyid Sūlār, the tomb of the saint himself being at Bahraich. It was nearly two centuries later, however, before Muhammad Ghori's general, Kuth-ud-dīn, finally defeated Jai Chand of Kanauj' in 1194, and thus broke up the last great Hindu kingdom. Not long afterwards the Bhars, a dark-skinned aboriginal race still existing as a low caste, rose into importance in Southern Oudh and in Bundelkhand, but were crushed in 1247; and the

history of the province for nearly soo years is a part of the general history of the kingdom of Delhi. There were local governors at Alodhya, Bahraich, Sandila, Manikpur, and other places, who often found it difficult to maintain their authority; for in Oudh, as in Bundelkhand, the Hindus were never thoroughly subdued, as they were at an early date in the Doah and later in Rohilkhand. In 130.1 Khwāja lahān was made governor of Kaunui, Oudh, Kara, and Jaunpur, and soon afterwards assumed independence. For more than eighty years the province formed part of the great Sharki (or Eastern) kingdom of Jaumpur, and shared in the struggle with Delhi. which ended with the fall of Jaunpur in 1.178. In the southwestern corner Tilok Chand, head of the Bais Raiputs, gradually rose to power and became the greatest noble in Oudh, with a large tract owning his sway, known as Baiewara.

After Babar had gained a footing in Hindustan by his The victory at Panipat in 1526, and had advanced to Agra, the Mughala, defeated Afghan house of Lody still occupied the Central Doah. Oudh. and the eastern Districts of the present United Provinces. In 1527 Bābar, on his return from Central India, defeated his opponents in Southern Oudh near Kanaui, and passed on through the province as far as Ajodhya, where he built a mosque in 1528, on the site renowned as the birthplace The Afghans remained in opposition after the of Rama. death of Babar in 1530, but were defeated near Lucknow in the following year. The Mughal power was, however, still far from secure: and Sher Khan (afterwards Sher Shah), the new leader of the Afghans, gradually increased his influence till in 1540, by his victory at Kanauj, he compelled Humayan to fly from India. For five years the country was at rest; but on the death of Sher Shah in 1545 the Afghan power began to fall in pieces, and Humflyun returned in 1555. Under Akbar a redistribution of the empire into provinces took place. Outh was formed into a Sülvali or province, containing five sarkars or divisions and thirty-eight makals or parganas. vincial forces consisted of 7,640 cavalry, 168,250 infantry, and 50 elephants. Awadh or Ajodhyā was then one of the princivil cities in India, and Lucknow was rising in importance. Akhar's government was not established without a struggle, and in 1565 the jartrairs Iskandar Khan of Ajodbya and Khān Zamān of Jaunpur revolted and took Lucknow, but were soon defeated. It is noticeable that in the list of Akhar's mandees only three belonged to Oudh, one of whom was n Hindu, the relebrated Todar Mal.

Eighteenth century.

Saldat Khān,

The rule of the Mughal emperors was uneventful for Oudh during the next 150 years, when the chief centre of interest lay in the Deccan. Local prosperity may be inferred from the rise in revenue, which was 50 lakhs in 1594 and 83 lakhs about 1720, while the measured area had increased from 0.033 square miles to 18,577. In the struggles for the succession to Shāh Tahān and Aurangzeb Oudh played no important part, When, however, the Mughal empire fell to pieces, small states arose, the rulers of which obtained practical independence. Among these Oudh took the first place; and its importance dates from the appointment about 1724 of Muhammad Anim. originally a merchant from Khorāsān, to be governor of Oudh, with the titles of Saadat Khan and Burhan-ul-mulk. The new governor was a great soldier, who soon reduced those of the local Hindu chiestains who opposed him. He built a house a few miles west of Ajodhyā, round which grew up the new town of Fyzābād; but most of his time was spent elsewhere. fighting at one time against the Marathas and at another against Nadir Shah, or fulfilling the duties of his office as Wazir of the empire. Deputies managed his two provinces of Oudh and Allahābād, and on the whole ruled well under his guidance.

Safdar Jang.

He was succeeded in 1739 by his nephew and son-in-law, Safdar Jang, who had been his deputy at Fyzābād, and was an able statesman. Under both these rulers the province enjoyed great prosperity, and forts, wells, and bridges were constructed. In 1745 Safdar Jang quarrelled with Ali Muhammad, who was then consolidating the Rohillas on the western boundary of Oudh, and thus commenced the long struggle which was to end in the addition of Rohilkhand to Oudh. When the old Nizām of the Deccan died in 1748, he was succeeded in his office as Wazīr of the empire by Safdar Jang. Then followed a war with the Pathan chief of Farrukhabad, which resulted in Saldar Jang's invoking the assistance of the Marathas, who afterwards became a menace to his own province. immediate result, however, was that the Farrukhabad territory became practically dependent on Outh. In 1754 the emperor Ahmad Shah deprived Safdar Jung of his office as Wazīr, and aided by the Marāthās successfully drove him back to Oudh when he attempted, with the help of the lats, to seize Delhi. In the same year Safdar Jang died and was succeeded by his son, Shujā-ud-daula, who removed the capital for a time to Lucknow, which had first become a considerable town in the time of Sher Shah. He was engaged almost at once in conjunction with the Rohillas in repelling the Marathas, who

Shujā-uddaula.

had been summoned by the new Work, Gharlad-din, and were now looked on as a common enemy of the states of When the prince All Gaubar (afterwards Shah Alam II) escaped from Delhi, he was received by Shuja-uddaula and advised to proceed against Bengal, where the British power was increasing. In 1761 Shutā-ud-daula fought by the side of the other Muhammadan chiefs in the great buttle at Paulpat, and soon afterwards Shah Alam gave up his fruitless contests with the British, and retired to Allahabad. Here he was under the control of Shuja-ud-daula, who was appointed to the office of Wazir, which henceforth became hereditary in his family. After the massacre at Patna in 1763, Mir Kāsim and his lieutenant, Sumrū, fled to Oudh and were joined by the emperor and Shujā-ud-daula; but the allied troops failed to take Patna and were completely defeated by the British at Buxar in 1764. Shah Alam, who had taken no part in the fighting, went over to the British, while Shujaud-daula fled through Fyzābād and Lucknow to Bareilly. He obtained some help from the Pathans and even from the Marāthās, and again faced the British in 1765 near lājmau in Cawapore District, but suffered defeat a second time. the treaty then proposed, the British were to obtain the greater part of the present Benares Division, and Shah Alam was to be placed in possession of the rest of Oudb. The Court of Directors, however, refused to sanction this arrangement, and everything was restored to Shuja-ud-daula, except the districts south of the Ganges (now Cawapore, Fatchpur, and Allahabad), which were made over to the emperor. Shuja-uddaula also undertook to pay the British a contribution of 50 lakhs. About this time he moved his court back to Fyrabad, where he built a fort and greatly increased the prosperity of the city. In 1769 the Marathas returned to Hindustan and assumed a most threatening attitude. years later, the emperor disregarded the advice of the British and joined them, leaving Allahabad in charge of Shuja-uddaula. The danger to Oudh and the British was imminent and when the Marathas extorted a grant of the Allahabad territory from Shah Alam, British troops were sent to occupy Chunar and Allahabad. The Marathas pressed on, and in 1773 Sir Robert Barker marched to guard the frontiers of Oudh and Rohilkhand under a guarantee of a lakh of rupees a month. British troops aided in driving the Marathas out of Rohilkhand, and later in the year Warren Hastings met Shujaud-daula at Benares. The result was the cession to the Wazir

of the Allahābād territory, which was taken from the emperor because of his grant of it to the Marāthās, while the Wazīr paid the Company 50 lakhs and undertook to pay 25 lakhs a year, besides the cost of a brigade of British troops to be stationed on the borders of his territories. A permanent British Resident was appointed for the first time at his court, and these arrangements may be said to mark the conversion of Oudh into a state dependent on the Company. Shujā-ud-daula now made fresh efforts to reduce the Rohillas, who had been intriguing with the Marāthās, and had refused to pay for the help given them in 1772. The Council at Galcutta hesitated, but finally sent troops, and in 1774 Rohilkhand was added to Oudh with the exception of the present Rāmpur State, which was left in the hands of a Rohilla chief.

Asaf-nd-

Shuifi-ud-daula died in 1775, and was succeeded by his son. Asaf-ud-daula, who was incapable and inclined to debauchery. He was at once required to cede to the Company the zantindari of Benares, and to pay more for British troops. sonal extravagance was great, and he demanded large sums from his mother, the Bahu Begam. The court was now finally removed to Lucknow, and Fyzābād began-to decline; while most of the state suffered from his failure to exercise any personal authority and from the quarrels of his subordinates. In 1781 a new treaty was made by Warren Flastings, under which the British troops in Oudh were reduced to one brigade and one regiment, and the Nawah was authorized to resume jagars or grants of land. Asaf-ud-daula took advantage of this to confiscate the jagirs of his mother and grandmother, and by imprisoning their chief officers extorted large sums of money. from them. Warren Hastings's share in these transactions was one of the counts in his subsequent impeachment. His approval of the resumption of the jagirs was, however, justified by the behaviour of the Begams, who had raised the whole of eastern Oudh against the British when the emeute at Benares took place in 1781 1.

Srādat Alī Khūn.

Asaf-ud-daula died in 1797, and was succeeded—after a short interval, during which his reputed son, Wazīr Alī, ruled—by his half-brother, Saādat Alī Khān, who concluded a treaty ceding to the Company the fort of Allahābād and promising an annual subsidy of 76 lakhs, while the British in return undertook the entire desence of Oudh. Four years later, after the threatened attack by Zamān Shāh Durrāni, Robilkhand and other parts of

<sup>&</sup>lt;sup>1</sup> Warren Hastings's Insurrection at Banaris, Appendix, p. 8 (Bootkee reprint, 1853).

the Oudh territories were in a state of anarchy, and it was feared that Sindhia would scize the opportunity to attack the state. The Nawib, therefore, executed a fresh treaty piving up the so-called Ceded Provinces<sup>1</sup>, which left him with the area now colled Oudh, surrounded on all sides by British territory except on the north, where the Gurkhas ruled. Sadait Ali Khan died in 1814, having been a good ruler compared with his predecessor. In particular, he attempted to reform the revenue administration, one of his chief difficulties being the resumption of grants made by previous rulers. At his death the treasury contained 14 crores of rupees, though all establishments had been paid up to date and there were no debts.

The history of his successors is a miserable record. The Later only redeeming feature of the period is the occasional employ- rulers. ment as minister of the capable Mahdi Ali Khun, who had been trained under Saudat Ali. Ghazi-ud-din Haidar, son of Saudat All, was allowed to assume the title of king or Shah in 1819, and was the first to strike coin in his own name. He spent four crores of the treasure left by his father, and was succeeded in 1827 by his son. Nasīr-ud-dīn Haidar, a debauchec, who aped English manners and lest only 70 lakks when he died in 1837. An attempt was then made to place a putative son on the throne; but a few of the Company's sepays were sufficient to quell the disturbance that grose, and the uncle of the late king succeeded as Muhammad All Shah. He died in 1842 and was followed by his son, Amjad Alf Shah (died 1847). In 1850 it was estimated that Wajid All Shah, the last king, was spending more than 20 lakhs annually over and above the whole revenue of the state, while the allowances of his officials and his family were greatly in arrears. Muhammad Ali Shah had made some attempts at reform in the administration of justice and the revenue system; but Mahdi Ali Khān, whom he recalled for the purpose, was then an old man, and nothing came of them.

Open resistance to the king's officials and defiance of all law Annexaand order were the ordinary rule. Chronic anarchy and trops oppression had reduced the people of Oudh to extreme misery, and reform by its native rulers had long been hopeless. In 1828 the Resident had reported that only British assumption of administration could save the country from ruin, and in

1 1

The present Goral hour Dividon, most of the Bareilly Dividon, and the Districts of Allahäteid, Campore, Fatebour, Etämb, Malapun, Etab, and Farrukhäteid, the south of Mireapur, and the Taral fargunar of the Kumaun Division.

1834 the Court of Directors had authorized this step; but it was averted for the time by the improvement effected by Mahdi Alī Khān. In 1856 things had come to such a pass that a treaty was proposed to the king, which provided, on liberal. terms to himself and his heirs, for the cession of his state to the Company. The king, however, refused to sign it; and accordingly, in February, 1856, the British Government assumed to itself the government of Oudh, exclusively and for ever. A provision of 12 lakhs a year was offered to the king, which he accepted in October, 1859, and separate provision was sanctioned for his collateral relatives. Wājid Alī Shāh was allowed to retain the title of king of Oudh till his death in 1887, when the title ceased absolutely, and the pecuniary allowances were reduced. On its annexation, Oudh was constituted into a Chief Commissionership, and organized on the model of administration which had been adopted in the Punjab eight years previously. Troops had been moved in, and one British infantry regiment held Lucknow, while native regiments garrisoned Sītāpur, Fyzābād, Sultānpur, Bahmich, Daryābād, Salon, and Secrora. The first year after annexation passed on the whole quietly.

Mating.

The annexation had, however, caused considerable discontent among important classes. The talukdars feared, with more or less reason, the loss of position and estate. The sepoys, who were largely recruited from the Province, anticipated the curtailment of the exceptional privileges which they had enjoyed while their homes were in native territory. The rebellion began in Oudh a fortnight after the outbreak at Meerut gave the signal for a general rising. In March, 1857, Sir Henry Lawrence had assumed the administration at Lucknow; and on May 30 five of the native regiments broke into The remainder of the events connected with the siege and recovery of the capital are narrated in the article on LUCKNOW CITY, and need only be briefly mentioned here. For some time the talukdars, with few exceptions, took no active part in the revolt; several of them did noble service in saving the lives of fugitives; but the native garrisons of the out-stations followed the example of their comrades at Lucknow, and by the middle of June the Residency at Lucknow was the only spot in the Province under the British flag. On July 4 Sir Henry Lawrence died from wounds caused by a shell. For twelve weeks the little Lucknow garrison was besieged by an overwhelming body of mutineers, till relieved by Outram and Havelock on September 25. In spite of this reinforcement, the British force found liself too weak to fall back upon Cawapore, and the siege continued till mised by Sir Colin Campbell on November 17. The women and children were then escotted to Campore by the main body, while General Outram held the outlying post of the Alambuch with a small gartison. Lucknew itself remained in the hands of the rebels, who fortified it carefully under the direction of the Begam! of Oudh. Early in 1858 General Franks organized a force at Benares for the reconquest of the Province, and cleared the south-eastern Districts of rebels. At the same time Jung Bahadur, the minister of Nepal, assisted the British with a body of 8,000 Gurkhas, and twice defeated the insurgents with great slaughter. On the last day in February Sir Colin Campbell crossed the Ganges and marched on Lucknow. Occupying the Dilkusha palace on March 5, he effected a junction with Franks and the Nepalese army, and began the siege the next day. The town was captured after a desperate resistance, and the work of reorganization of the Province began. Early in April Sir Hope Grant marched with a column north-west of Luckney, and soon afterwards General Walpole passed through Hardot. In May the rebels who threatened the Campore road were dispersed and in June the Begun's army, which was threatening Lucknow, was defeated. General Grant marched to Fyzabad in July and then south to Sultanpur, while a force co-operated from Allahabad. The military police, which had been reorganized, and a Sikh contingent under Ruja Randhir Singh of Kapurthala did valuable service; and when the Commander-in-Chief took the field in November, 1858, the rebellion collapsed at once, and Oudh was pacified by the end of the year,

Outh is rich in ancient sites, but none of these has been Archaeoregularly explored, except the mounds at SET MAHER in the logy. Gonda and Italicaich Districts, which yielded important Buildhist and Jain remains. Opinions are divided as to whether this is the site of the ancient city of Sravasti. Popular belief associates many places with the aboriginal Bhars, of whose history little is known. At Ajodhyā, which is connected with the legendary history of the Solar race, the Hindu temples are all of modern date. The early Muhammadan period is chiefly represented by traditions of the religious incursion of Snivid Salar, whose tomb at Bahraich was built early in the thirteenth century, or 200 years after his death. The mosque

Wife of Walld All Shah, the last king, and mother of flirlis Radar, who wramed the throne.

of Bābar at Ajodhyā, and the remains of a few buildings crected by the Sūri Pathāns, may also be mentioned. The Mughals have left few memorials in the Province; and the chief buildings now standing are those erected by the Nawābs and kings of Oudh in the last quarter of the eighteenth and first half of the nuncteenth centuries, at Fyzāsād and Lucknow. The earlier buildings of this period are not unpleasing; but the style degenerated, and the later edifices are vulgar in the extreme.

Population. Density.

Outh has probably the densest rural population of any equal area in the world. The first Census taken in 1369 returned a total population of 11-2 millions, on an area of 24,000 square miles, yielding an average of 468 persons per square mile; but defects in the procedure probably caused the figures to be exaggerated. In 1881 the population was returned at 11-a millions, the central Districts having suffered from famine Ten years later there had been an increase to 12.7 millions. and all parts of the Province showed an increase in prosperity. The famine of 1806-7 caused distress in southern and western Oudh, especially in Hardoī and Rāe Barelt, but the total population increased to 12-8 millions in 1901. Statistics of the population in root for each of the twelve Districts included in the two Divisions of Lucknow and Fyzābād will be found in the article on the United Provinces. The average density was 5.35 persons per square mile; but in single Districts the figure varied from \$20 in Lucknow and 704 in Fyzabad to 305 in Kheri. Central Oudh is the most thickly populated portion, while the submontane Districts are less crowded, but are filling up rapidly. Emigration to distant parts of India and to the colonies is becoming considerable. Partabgarh and Kāc Barell Districts in southern Oudh send the largest numbers to Assam. while the northern Districts of Gonda and Tyzabad supply emigrants to the colonies. The principal city in the Province is Lucknow, which has a population of 264,049, including the cantonments, and is larger than any city in India except the three Presidency towns and Hyderabad. Fyzābād (with Ajodhyā) has a population of 75.085; but there are only three other towns, Bahraich (27,304), Sitapur (22,557), and Shahahad (20,036), whose population exceeds 20,000. The absence of large cities and towns is remarkable, and the agricultural population forms nearly 73 per cent. of the total.

Religion.

The proportion of Hindus to Musalmans in the total population of Oudh is much the same as in the Province of Agra, though the Musalmans are numerically a little weaker and are

found to a larger extent in towns. Out of x-7 millions of Musalmans more than 62,000 are Shiahs, the largest numbers being found in Lucknow cits, where the sect of the former kings still has many followers.

Except in Hardoi District, where a dialect of Western Hindi Language. is spoken, the language of the whole of Qudh is the Awadhi dialect of Eastern Hinds, an old form of which was used by Tulst Das, the author of the vernacular version of the Ramayana, which has been termed the Bible of Upper India. The dialect is still a favourite vehicle for verse, as its forms are more suitable to the indirenous metres than Urdu or Hindustani, which is used for prose or in conversation by educated people.

The caste system is described in the article on the UNITED Caste, In rural tracts more respect is paid to the tribe, and higher castes than in the Doals, and the prejudices of Bruhmans and Raiputs against touching a plough are recognized by their landlords, who allow them privileged rates of rent. Brahmans number 1.4 millions, and Ahirs and Chamars each Among the cultivating classes may be men-1.3 millions. tioned the Kurmis (0.0 million), and Lodhas and Muraos (each ou million); and among lower castes the Pasis, numbering nearly a million, who are largely employed as toddy-drawers, chaukidārs, and labourers.

No metalled roads existed in Oudh at the time of annex-Communi-After the calions. ation, except that from Campore to Lucknow, pacification in 1858 the first lines of communication to be taken up were roads from Allahābād to Fyzābād and from Lucknow to Fyzālaid. With the extension of railways the roads have become only of local importance. The main line and a loop of the broad-gauge Oudh and Rohilkhand State Railway pass from north-west to south-east through Qudh, south of the Gogm, while an important branch connects Lucknow with Cawnpore, and a line from Allahabid through Partabgarh and Sulfangur to Fyzābād has recently been opened. The submontane Districts are well served by the narrow-gauge Rengal and North-Western (Company) line and the Lucknow-Stupur (State) Railway.

Oudh remained a separate administration until February, Adminis-1877, when the offices of Chief Commissioner of Oudh and tration. Lieutenant-Governor of the North-Western Provinces were united. Since 1902 the title of Chief Commissioner has merged in that of Lieutenant-Governor of the United Provinces. In revenue matters the Chief Commissioner remained the principal authority till after the passing of Act XX of 1800,

In revenue matters the Chief Commissioner remained the principal authority till after the passing of Act XX of 1800.

under which the control of the North-Western Provinces Board of Revenue was extended to Oudh. For most administrative purposes there is now no difference between the Provinces of Oudh and Agra. The principal exceptions are in the land revenue system, especially in its relation to tenures, the rent law, and the judicial system, each of which will now be described.

Land revenue.

On the acquisition of what is now the Province of Agra, the policy adopted was to set aside the officials who, during the decline of Mughal power, had acquired quasi-proprietary rights and a hereditary position. The official samindars of Bengal had been tried and found wanting, and an attempt was made to engage for the payment of revenue with the actual occupiers of the soil. In several Districts a double proprietary right was found, the holder of the superior right being called a talukdor. The relation of the talukdor to the subordinate proprietor was, however, largely a temporary arrangement due to the disturbed state of the country; and the subordinate proprietors were therefore invested with full proprietary rights, subject, in some cases, to the payment of an allowance to the talukdārs, who were confirmed only in their ancestral estates. The same policy was applied to Oudh on annexation, though the circumstances were not identical. The talukdars then held 23,543 villages in the Province out of 36,721. A summary settlement was made in 1856, which recognized the rights of the talukdars in 13,640 villages with a revenue of 35 lakhs, and set them aside in 9,903 villages with a revenue of 32 lakhs. The Mutiny broke out in May, 1857, and on the restoration of order in 1858 the policy was completely reversed. In the first place, the proprietary right in practically all the land of the Province was declared to be confiscated on account of rebellion. This proclamation was severely censured in India and in England, but was justified on the ground that the change in policy required the cancellation of existing rights. Only five 1 talukdars had remained loyal; their rights were maintained, and they were subsequently rewarded with large additional grants and a permanent settlement. The other talukdars and landholders were called on to submit, and a liberal measure of indulgence was promised to those who came forward promptly and helped to restore order. Though order had not been completely restored, owing to the suspicion of the talukdars regarding the real intentions of Government, summary settlements

<sup>1</sup> The proclamation of March, 1858, mentioned six, but one was found later to have rebelled.

were commenced in 1859 and 22,658 villages were settled with talukdars. This reversal of the former policy became the subject of much discussion. Lord Canning in April, 1858, described the majority of the falukdars as men, distinguished neither by birth, good service, nor connexion with the soil, who had acquired their position by holding office under a corrupt government; but at the same time he justified the new policy by declaring that the village proprietors had shown themselves unfit for the position in which they had been put. In October he was of opinion that the action of the latter had almost amounted to an admission that they did not value independent rights, and that the talukdari system was 'the ancient, indigenous, and cherished system of the country.' More complete inquiries than were then possible have shown that neither of these statements was altogether correct. With some notable exceptions the majority of talukdars at annexation were not officials, but belonged to families connected with the soil. Many of them were the descendants of hereditary chiefs, whose authority had long been acknowledged over wide tracts of country. So far as the talukas represented these chieftainships, or the territory held by a body of clansmen with their Raia as its head, they were no doubt ancient and indigenous. In its later form, however, when the system had developed under a weak and corrupt government, it is more correctly described as one of convenience, as far as the village proprietors were concerned, than as a cherished institution. Almas Ali. the capable minister of Nawab Saadat Ali Khan at the end of the eighteenth century, took pains to engage directly with the village occupiers in the part of the Province under his control. For fifty years afterwards a weak central government made few attempts to control its corrupt officials or to keep the peace among the talukdars. The petty Rajas, constantly fighting with each other or with the officials, were interested in attaching to themselves village communities who could aid them with fighting men, while the latter gained by voluntarily including their villages in talukas, as the talukdars paid revenue direct to Lucknow and the extortions of the collectors were avoided. Thus by 1856 many of the estates held by representatives of old families had grown far beyond their original limits, by voluntary accessions, by the conquest of weaker neighbours, or by the crushing of the village proprietors. In addition there were the comparatively few large talukas put together by court favourites, officials, or bankers. The summary settlement of 1859 restored the status of 1856, regardless

of the methods by which estates had been acquired, except where estates were permanently confiscated for murder or the refusal to submit. The same year a declaration was issued that those talukdars with whom a settlement had been made had acquired permanent, heritable, and transferable rights in their talukas. Formal certificates (sanads) announcing this were drawn up and distributed. An Act to define the rights of talukdars and to regulate the succession to their estates was subsequently passed (The Oudh Estates Act, 1860); result has been to give the talukdars absolute powers of disposal of their property, either in their lifetime, or by will a notwithstanding the limits imposed by Hindu or Muhammadan law. Most estates descend in case of intestacy to a single heir under a law of primogeniture, the rules of which are contained in section 22 of the Oudh Estates Act, but others are subject to the ordinary law of inheritance.

Talukdārs' 1870.

The talukdars, like the large landholders in all parts of Relief Act, India, have had their troubles. Debts before annexation and mismanagement afterwards involved many of their estates, and ... in 1870 an Act was passed for their relief. The estates of those who applied to come under its operation were vested in managers, and as a consequence all civil suits and the execution, of decrees against such estates were suspended. In all, fortyseven estates with a rental of 25 lakhs were brought under the Act; but three were released almost at once: 'The remaining forty-four properties were found to be indebted to the amount. of 32 lakhs. The working of the Act, while favourable to the talukdārs, gave rise to well-founded complaints by creditors, Mortgagees in possession could be ousted, and interest was reduced to not more than 6 per cent. In 1873 it was proposed to make Government loans, so as to free those estates which were certainly capable of repaying them with 5 per centinterest in twenty years; but two years later it was decided. that all private debts should be paid off by loans from Government. More than 26% lakhs was advanced, and the cost of management was reduced by making Deputy-Commissioners responsible for it. The later administration of the Act was thus similar to the operations of the Court of Wards.

Settled Estates (United

In 1894 the talukdars asked that the Act of 1870 might be revived, and also raised the question of making estates in-Provinces) alienable. Discussion followed, and in 1900 an Act was

When all helps are disinherited, the will has effect only if executed more than three months before the death of the testator and registered within one month of the date of execution.

passed providing that talukdars and grantees in whose estates Act II of the rule of primogeniture is in force may apply for permission 1900. to bring their estates under the Act. If property is encumbered it may only be 'settled' (or entailed) with the consent of all the encumbrancers, or when Government is satisfied that their interests will not suffer. The 'settlement' may be declared irrevocable, or, if this is not done, it may be cancelled with the sanction of Government. The effect of the Act is to make the holder of a 'settled' estate incapable of alienating or encumbering it; leases may be given only for seven or, with the District officer's sanction, for fourteen years; a testator may only bequeath 'settled' property as a whole, and must bequeath it to an heir. Up to the end of 1904 five estates had been 'settled' under the Act, all but one irrevocably.

The terms of the sanads of 1859 reserved to the Government Subordipower to take such measures as it might think fit to protect nate the inferior proprietors and village occupants, and an acute controversy took place which was not settled till 1866. regard to the subordinate proprietors, the dispute was whether rights should be recognized only so far as they were actually enjoyed in 1856, or whether the enjoyment in previous years of rights subsequently lost should be held to give a valid claim. It was soon decided that the settlement courts and not the civil courts should adjudicate on disputed cases, and should be allowed to hear claims to sub-proprietary rights based on enjoyment of rights as far back as 1844 or twelve years before annexation. The definition of what should be considered an enjoyment of rights proved more difficult, and there was hopeless disagreement over the rights of tenants. In the latter case the question turned on whether there was any custom by which length of tenure gave a right of occupancy. An inquiry was held, the results of which were differently interpreted. Finally, in 1866, it was found possible to dispose of the two matters together by what is known as the Oudh Compromise. The talukdars agreed to the detailed rules drawn up for the guidance of the settlement courts in dealing with claims to sub-proprietary rights, which were embodied in Act XXVI of 1866 and later executive orders. It was at the same time decided that tenants who had held proprietary rights within thirty years of annexation should receive occupancy rights. while no other tenant right was recognized.

In Oudh the Government demand for revenue has from the Settlement. first been nominally half of the net rental 'assets.' Where both superior and inferior proprietary rights exist, the settlement

was made with the superior proprietor or talukdār. It was then decided by the settlement court whether a sub-settlement should be made with the inferior proprietor or not. The latter is called a sub-settlement holder where this was done, and his rights include the power of transfer. In other cases the right awarded was a permanent, heritable, but not transferable lease at a rent fixed by the settlement court. The sub-settlement holder or permanent lessee manages the area in which he has rights, and pays rent (which includes the Government demand) to the talukdār. If he falls into arrears, the talukdār may either sue in the rent courts or apply to the District officer to collect the rent for him.

Occupancy rights.

It has been shown that the proposal to grant occupancy rights in Oudh based on long holding was given up. By Act XIX of 1868, however, tenants who had possessed proprietary rights within thirty years of annexation, and had lost them when annexation took place, received a heritable, but not a transferable, right of occupancy in the land held by them in the village or estate where they were formerly proprietors. This right includes protection from eviction, except for nonpayment of arrears of rent, and carries with it a privileged rate of rent which cannot be enhanced beyond a rate 12% per cent. below that paid in the neighbourhood by tenants with no right. When the revenue law was consolidated, Acts XVII and XVIII of 1876 granted a similar right to landholders whose proprietary or under-proprietary rights were transferred for arrears of land revenue, or in execution of decree after the passing of these Acts, in respect of as much of the land in their cultivating occupancy at the time of transfer as the District officer might determine. Important changes were introduced by the United Provinces Acts III and IV of 1901. Ex-proprietors who acquire rights under these Acts enjoy a privilege in rent of four annas in the rupee (or one-fourth), and by the latter Act the right was extended to persons whose proprietary or underproprietary rights had been transferred by voluntary alienation. The right acquired under these Acts is called ex-proprietary, and it accrues only in land continuously cultivated by the ex-proprietor for twelve years before the date of the transfer, or in sir, or homestead land. In Oudh sir means land which had been recognized as sir, or had been cultivated continuously by a proprietor or under-proprietor, for seven years before the passing of the Oudh Rent Act, 1886.

The statutory tenant.

It had been asserted in the great controversy that there was no danger in Oudh of rack-renting, as the land was not fully

cultivated, and tenants were in demand instead of competing for holdings. The population had, however, been underestimated, for while in 1859 it was guessed at between 5 and 8 millions, the Census of 1869 showed it was about 114 millions. The extent of the protection afforded by the grant of occupancy rights was over-estimated. Instead of these forming 15 to 20 per cent, of the cultivating classes, they were found to number less than one-half per cent. By 1873 the number of notices of ejectment of ordinary tenants had attracted attention, and annual inquiries showed that these notices were being largely used as a means to enhance rents. In 1881 the views expressed by the Famine Commission on the relations between landlord and tenant in Northern India led to further inquiry; and the estate of one talukdar was sequestrated on the ground that he had enhanced rents excessively and discouraged cultivation, and thus committed a breach of the conditions of his sanad, which directed him to promote the agricultural prosperity of his estate. The order was cancelled by the Government of India; but at the same time more information was called for on the state of Oudh, and a careful inquiry was made in 1882-3. This showed that there had been a considerable enhancement of rent during the thirteen or fourteen years which had elapsed since settlement. In the villages selected the average incidence of rent had increased by nearly 25 per cent., the increase varying from 14 per cent, in Gonda to over 40 per cent, in Partabgarh. There was a general feeling that the tenants should be placed in a more secure position, and that enhancement should bar a further increase for a certain time. The remedies to be applied were the subject of much discussion, which resulted in the Oudh Rent Act of x886. Under this law all tenants without a right of occupancy obtained the statutory right to retain the holdings occupied by them when the Act was passed, at the rent then payable, for a period of seven years from first occupation or from the last change in the rent or area of the holding. After each period of seven years rent may be enhanced within a limit of 61 per cent. On the death of a tenant his heir may complete the period of seven years then current, after which the landlord may make a fresh contract for rent without the 61 per cent. limit; but this in turn becomes subject to the septennial revision described above. A statutory tenant may be ejected at the close of a seven years' period; but unless the tenant is ejected because he has refused to pay a legal enhancement, a penal court fee of half the annual rent not exceeding Rs. 25 is levied, and in any case the new rent may not exceed the old by more than 63 per

cent. This Act has worked well, though it has not entirely prevented enhancements beyond the legal limit. In many cases such enhancements have been borne without complaint where rents were inadequate; but the tenantry have shown themselves ready to come forward freely where real injustice is done, and they are certainly better protected than they were before.

Judicial.

The judicial system in Oudh is separate from that of Agra. Up to 1870 the ordinary non-regulation system prevailed. according to which the same officials exercised civil, revenue, and criminal powers. In that year it was modified, and under the Oudh Civil Courts Act of 1879 Munsifs and Subordinate Judges were appointed for civil work. The Commissioners of Divisions continued to be Divisional, Civil, and Sessions Judges till April, 1891, when District Judges were appointed and two Commissionerships were abolished. The highest court of appeal is that of the Judicial Commissioner, who was in 1905 . assisted by one permanent and one temporary Additional Judicial Commissioner. District Magistrates, as in most nonregulation Provinces, can pass sentences of imprisonment up to a limit of seven years. The principal statistics of civil litigation are given below. Civil suits proper are more numerous proportionately to the population than in Agra, but tend to decrease, while rent suits are fewer, but are increasing.

	Average for ten years ending 1800.	Average for ten years ending 1900.	igot.	1903,

Panchala,—An ancient kingdom of Northern India, forming the centre of the Mannya-Desa or 'middle country.' There

were two divisions: Northern Panchāla, with its capital at Anī-CHHATTRA or Adikshetra, in Bareilly; and Southern Panchala, with its capital at KAMPIL, in Farrukhābād. They were divided by the Ganges, and together reached from the Himālayas to the Chambal. In the Mahābhārata we find the Pāndaya brothers. after leaving Hastinapur (in Meerut District) and wandering in the jungles, coming to the tournament at the court of Drupada, king of Panchāla, the prize for which was the hand of his daughter, Draupadi. The scene of the contest is still pointed out west of Kampil, and a common flower in the village lanes bears the name of draupadi. In the second century B.C. Northern Panchāla appears to have been a kingdom of some importance, for coins of about a dozen kings inscribed in characters of that period are found in various parts of it, but not elsewhere. has been conjectured that these were the Sunga kings who, according to the Puranas, reigned after the Mauryas; but only a single name, Agni Mitra, is found both in the Puranic lists and on the coins, though many others are compounds with Mitra ('friend'). The coins point to an absence of Buddhistic tendencies. Varāha Mihira, the Sanskrit geographer of the sixth century A.D., mentions a people, the Panchalas, who evidently inhabited the region described above.

[Lassen, Ind. Alt., vol. i, p. 598; Cunningham, Coins of Ancient India, p. 79; Fleet, Ind. Ant., 1893, p. 170.]

Rohilkhand.—The name is often applied to the present Physical BAREILLY DIVISION of the United Provinces; but it also features. denotes a definite historical tract nearly corresponding with that Division plus the RAMPUR State and the Tarai parganas of Nainī Tāl District. It is derived from a Pashtū adjective rohelah or rohelai, formed from rohu ('mountain'). Rohilkhand as thus defined contains an area of 12,800 square miles, forming a large triangle bounded on the north by the Himālayas, on the south-west by the Ganges, and on the east by the Province of Oudh. In the north lies a strip of the Tarai below the hills, with large stretches of forest land, the haunt of tigers and wild elephants, and only small patches of cultivation belonging to the Tharus and Boksas, jungle tribes, apparently of Mongolian origin, who seem fever-proof. Passing south the land becomes drier, and the moisture drains into the numerous small streams rising in the Tarai and joining the Ramganga or the Ganges, which ultimately receive most of the drainage. In the northern portions of Bijnor and Bareilly Districts, canals drawn from the Tarai streams irrigate a small area. The climate is healthy, except near the Tarai, and has a smaller range of temperature

than the tract south of the Ganges. The rainfall is heavy near the hills, but gradually decreases southwards. The usual crops of the plains are grown throughout the tract, but sugar-caue and rice are of special importance. Wheat, gram, cotton, and the two millets (jovair and bajra) are also largely produced.

History

In early times part of the tract was included in Northern PANCHALA. During the Mulammadan period the castern half was long known as Katehr; but the origin and meaning of this term is disputed. It is certainly connected with the name of the Katehriya Rajputs, who were the predominant clan in it; but their name is sometimes said to be derived from that of the tract, which is identified with the name of a kind of soil called kather or katehr, while traditions in Budnun District derive it from Kāthiāwār, which is said to be the original home of the Elsewhere the tribal traditions point to the coming of the Katehriyas into this tract, from Benares or Tirhut, in the twelfth and fourteenth centuries. The portion they first occupied seems to have been the country between the Ramganga and the Ganges, but they afterwards spread east of the former When the power of Islam was extending westwards, Rathor princes ruled at Budaun; but the town was taken by Kuth-ud-din Aibak in 1196, and afterwards held continuously by the Muhammadans. The province was, however, always turbulent, and two risings are described in the middle of the thirteenth century. In 1379 or 1380 Khargu, a Hindu chief of Katchr, murdered Saiyid Muhammad, the governor, at a feast; and Firoz III Tughlak, foiled in his attempt to seize Khargu, who fled to Kumaun, appointed an Afghan governor at Sambhal with orders 'to invade the country of Katehr every year, to commit every kind of ravage and devastation, and not to allow it to be inhabited until the murderer was given up.' Thirtyfive years later, when the Saiyid dynasty was being founded, another Hindu, Har Singh Deo, rebelled, and though several times defeated gave trouble for two or three years. Mahābat Khān, the governor, successfully revolted in 1419 or 1420 from the rule of Delhi; and the king, Khizr Khan, failed to take Budaun, which remained independent for four years, till after the accession of Mubarak Shah, who showed greater force and received Mahābat Khān's submission. In 1448 Alam Shāh Saiyid left Delhi and made Budaun his capital, careless of the fact that he was thus losing the throne of Delhi, which was seized by Bahlol Lodi. Until his death thirty years later, Alam Shah remained at Budaun, content with this small province. During the long struggle between the Jaunpur and the

Delhi kings, the former held parts of Katchr for a time. In the first half of the sixteenth century few events in this tract have been recorded; but the last revolt of the Katehrivas is said to have taken place in 1555-6. In the reign of Akbar the sarkar of Budaun formed part of the Sūbali of Delhi. The importance of Budaun decreased, and Bareilly became the capital under Shāh Jahān, while Aurangzeb included the district of Sambhal (Western Rohilkhand) in the territory ruled over by the governor of Katehr. At this time Afghans had been making many settlements in Northern India; but they were generally soldiers of fortune, rather than politicians or men of influence. Under Shāh Jahān they were discouraged; but they were found useful in the Deccan campaigns of Aurangzeb, and early in the eighteenth century the Bangash Pathan, Muhammad Khan, obtained grants in FARRUKHĀBĀD, while Alī Muhammad Khān, whose origin is obscure, began to seize land north of the Ganges. The former held the southern part of the present Districts of Budaun and Shahjahanpur; but the principality he carved out for himself lay chiefly south of the Ganges. All Muhammad gave valuable help to the governors of Moradabad and Bareilly against the Rājā of Kumaun, and also assisted the emperor in his intrigues against the Saivids of Bārha, for which he was rewarded with the title of Nawab. When Nadir Shah invaded India, Ali Muhammad gained many recruits among the refugees from Delhi, and took advantage of the weakness of the central government to annex all the territory he could seize. governors of Morādābād and Bareilly were sent against him, but both were slain, and in 1740 he was recognized as governor of Rohilkhand. His next exploits were against Kumaun; but by this time Safdar Tang, Nawab of Oudh, had begun to look on him as a dangerous rival, and persuaded the emperor that the Rohillas should be driven out. In 1745 Alī Muhammad was defeated and imprisoned at Delhi, but afterwards he was appointed to a command in the Punjab. On the invasion by Ahmad Shāh Durrāni in 1748, he was able to return to Rohilkhand, and by judiciously supporting the claims of Safdar Jang to be recognized as Wazīr, obtained a fresh grant of the province. On the death of Alī Muhammad, Rahmat Khān, who had been one of his principal lieutenants, was appointed regent for his sons. Safdar Jang renewed his attempts to take Rohilkhand, and persuaded Kaim Khan, son of Muhammad Khan Bangash, of Farrukhābād, to invade it. The attack was unsuccessful, and Kaim Khān lost his life. Safdar Jang at once annexed the Farrukhābād territories; but Kaim Khān's brother,

Ahmad Khān, regained them, and attempted to win the active sympathy of the Robillas, which was at first refused and then given too late; for Safdar Jang called in the Marathas, with whose help he defeated the Rohilla and Bangash forces, and Rohmat Khān was driven to the foot of the Himālayas. 1752 he yielded and gave bonds for 50 lakhs, which were made over to the Marathas in payment of their services. Ahmad Shāh Durrāni invaded India a second time, he brought back Ali Muhammad's sons, Abdullah and Faiz-ullah, who had been in Kandahar since the previous invasion; but Rahmat Khān skilfully arranged a partition of Rohilkhand. so that the brothers fought among themselves, and eventually Rahmat Khān and his friends became masters of most of the province. About this time (1754) another Pathan, named Najīb Khān, was rising in power. At first he acquired territory in the Doab, but in 1755 he founded Najībābād in Bijnor, and thus held the northern part of Rohilkhand independently of the other Rohillas. After the third Durrani invasion in 1757, he became Bakhshi or paymaster of the royal troops, and the following year an attempt was made, through the jealousy of other nobles, to crush him by calling in the Marāthās. mat Khān and Shujā-ud-daula, the new Nawāh of Oudh, were alarmed for their own safety, and hastened to help him, and the Marathas were driven out of Rohilkhand. When Ahmad Shah Durrani invaded India a fourth time, the Robillas joined him and took part in the battle of Panipat (1761), and Rahmat Khān was rewarded by a grant of Etawah, which had, however, to be conquered from the Marathas. In 1764 and again in 1765 the Rohillas gave some assistance to Shujā-ud-daula in his vain contests with the English at Patna and at Jajmau; but they did not suffer for this at first. In fact the next five years were prosperous, and Ruhmat Khān was able to undertake one of the most necessary reforms of a ruler in this part of Indiathe abolition of internal duties on merchandise. In 1770 the end began. Etawah and the other territory in the Central Doab were annexed by the Marathas. Najib Khan and Dunde Khān, who had been Rahmat Khān's right hand, both died. In 1771 the Maräthas attacked Zābita Khān, son of Najīb Khān, and drove him from his fort at Shukartar on the Ganges, and the next year harried Rohilkhand. In June, 1772, a treaty was atranged between the Rohillas and Shujā-ud-daula, in which the latter promised help against the Marathas, while the former undertook to pay 40 lakhs of rupees for this assistance. treaty was signed in the presence of a British general. The

danger to Oudh, and also to the British, from the Marāthās was now clear. Zābita Khān openly joined them in July, 1772, and at the end of the year they extorted a grant of the provinces of Korā and Allahābād from Shāh Alam. In 1773 they demanded from Rahmat Khan the payment of the 50 lakhs promised twenty years before, and again entered Rohilkhand. British troops were now sent up, as it had become known that Rahmat Khān was intriguing with the Marāthās, who openly aimed at Oudh. These intrigues continued even when the allied British and Oudh troops had arrived in Rohilkhand, and the Nawab of Oudh then made overtures for British help in adding the province to his territories. Finally, Rahmat Khan agreed to carry out the treaty obligations which he had formerly contracted with Oudh, and the Marāthās were driven across the Ganges at Ramghat. This danger being removed, Rahmat Khān failed to pay the subsidy due from him to the Nawāb of Oudh. Later in the same year, Warren Hastings came to Benares to discuss affairs with the Nawab, who strongly pressed for British help to crush the Rohillas. While the Council at Calcutta hesitated, the Nawab made secret alliances with Zabita Khān and Muzaffar Jang of Farrukhābād, and persuaded the emperor to approve by promising to share any territory annexed. He then cleared the Marāthās out of the Doab, and in 1774 obtained British troops to assist him against the Rohillas. The latter were met between Mīrānpur Katra in Shāhjahānpur and Fatehgani East (in Bareilly District) in April, 1774, and were defeated after a gallant resistance, Rahmat Khān being among the slain. This expedition formed the subject of one of the charges against Warren Hastings, which was directed to show that his object was merely to obtain money from the Nawab Wazīr in return for help in acquiring new territory. Contemporary documents prove clearly the necessity for improving the western boundary of Oudh as a defence against the Marāthās, and the danger arising from this country being held by men whose treachery had been manifested again and again. Faizullah Khān, the last remaining chief of the Rohillas, received what now forms the Rampur State, and Zabita Khan lost his possessions east of the Ganges. In 1794 an insurrection broke out at Rampur, after the death of Faiz-ullah Khan. troops were sent to quell it, and gained a victory at Fatehganj West. Seven years later, in 1801, Rohilkhand formed part of the Ceded Provinces made over to the British by the Nawab of Oudh.

The total population of Rohilkhand is nearly 6.2 millions. tion.

The density approaches 500 persons per square mile, and in Bareilly District exceeds 600. More than 1\frac{1}{3} millions are Muhammadans, forming a8 per cent, of the total—a proportion double that found in the Provinces as a whole. Among Hindu castes may be mentioned the Jats, who are not found east of Rohilkhand in considerable numbers; the Ahars, who are akin to the Ahars of other parts; and the Khāgis and Kisāns, excellent cultivators resembling the Lodhas of the Doāb. The Bishnoī sect has a larger number of adherents than elsewhere.

[Elliot, History of India, passim; Strackey, Hastings and the Robilla War (1892).]

Surasena.—The ancient name of a tract of country in Northern India, round Muttra. According to the Puramas it was the name of the grandfather of Krishna, whose history is closely connected with Muttra. The inhabitants of the tract were called Saurasenas, and Arrian mentions the Saurasenoi as possessing two large cities, Methora (MUTTRA) and Chisobora or Cyrisobora (not certainly identified), while the Toborrs river (Jumna) flowed through their territory. Pliny describes the Jomanes as flowing between Methora and Carisobora, Varaha Mihira, the Sanskrit geographer of the sixth century A.D., makes several references to the Saurasenas, who are placed in the MADHYA DESA or 'middle country.' The name has been applied to a variety of Prākrit, called Saurasena, which uppears to have been the ancestor of the present language described as Western Hindi in the Linguistic Survey of India. In later times part of this tract was called Braj or Braj Mandal, a name which still survives (see MUTTRA DISTRICT).

Lassen (Ind. All., vol. i, p. 137 n. 3) suggests that this is equivalent to Krishmapura, which he places at Agra. Cunningham (Ancient Geography of India, p. 375) identifies it with Brindaran. Muttra, Agra, and Brindaran are all on the right bank of the Jumms. See also McCrindle, Ancient India as described by Megasthenes and Arrian, pp. 140-1 and note.

contains 112 towns and 7.713 villages. The largest towns are MEERUT (118,129 with cantonments), ALIGARH (70,434), Sahāranpur (66,254), Hāthras (42,578), Khūeja (29,277), DEHRA (28,095 with cantonments), HARDWAR UNION (25,597), MUZAFFARNAGAR (23,444), and DEGBAND (20,167).

The chief places of commercial importance are Meerut, Sahāranpur, Alīgarh (Koil), Hāthras, Khurja, and Muzallurnagar; but many other smaller towns are important centres of the grain trade. HARDWAR and GARHMURTESAR are famous for their religious associations. Hastinapur, now a tiny hamlet is reputed to have been the capital of the Pandava kingdom. At Kālsī there is a rock inscription of Asoka; Batan of Bulandshahr, Aligarh of Koll, and Sardhana have special associations, referred to in the articles on those places, while Meerut was the place where the great Mutiny first broke out in Northern India in May, 1857.

Bonnfiguration. and hill and river systems.

Dehra Dun District.—District in the Meerut Division, daries, con- United Provinces, lying between 29° 57' and 31° 2' N. and 77° 35' and 78° 18' E., with an area of 1,200 square miles. It is bounded on the north-east by the Tehri State; on the southeast by Garhwal District; on the north-west by the Sirmur, Rawain, Taroch, and Jubbal States (Punjab); and on the south-west by Sahāranpur District.

> The District consists of two distinct portions. The greater part of it forms a gently sloping valley, 45 miles long and 15 10 20 miles broad, between the Himalayas and the Siwalik Hills, divided into two parts by a connecting ridge, from which the eastern Dun slopes down to the Ganges and the western Dun to the Jumna. The scenery of these mountain dales can hardly be surpassed for picturesque beauty even among the lovely slopes of the massive chain to which they belong. On the north, the outer range of the Himalayas rises abruptly to a height of 7,000 or 8,000 feet, with the hill station of Mussoorie and the cantonments of LANDOUR and CHARRATA. The Siwaliks rise with a more gentle slope on the south-west of the valley, but fall away suddenly to the great plain of the Doas. The other portion of the District is the Jaunsar-Bawar pargana or Chakrata tahsil, which strikes north from the outer range of the Himalayas between the valleys of the Tons and Jumna, and consists of a confused mass of ridges and spurs clothed with forest. The drainage of Jaunsar-Bawar falls into the Tons or the Jumna, which unite where they penetrate the outer range. The western Dun is drained by the Asan, which falls into the Jumna, and the eastern Dün by a network of

small channels which meet and diverge, again and again, before they join the Ganges. Both the Jumna and Ganges are here rapid rivers pouring over beds of boulders in several channels with islands between.

The Siwalik range is composed in its lower and southern-Geology. most parts of middle Siwālik soft sandstone or sand-rock with a few thin mammalian fossil-bearing conglomerates, and along its crest of thick upper Siwalik conglomerates. These are all of fresh-water origin, and dip at low angles below the flat surface of the valley. The latter is a broad expanse of recent gravels and consolidated fans of scree derived from the higher ranges. On the north of the valley the middle and upper Siwaliks again emerge, bent into sharp reversed folds by faulting against the older Himālayan series. The much-contorted outer Himālayan rocks include the slates and dark-grey limestones or dolomites of the Mussoorie ridge, the Jaunsar series of dark slates, quartzites, fine volcanic ashes, and basic traps, the Deoban massive limestone which comes above the latter and forms much of the rugged elevated country north of Chakrātā, and finally the Mandhata conglomerates and Bawar quartz-schists, which lie flatly above both of the latter series. older rocks have proved unfossiliferous and are probably very ancient. Lead and sulphur mines are found on the Tons river at 30° 43' N., and gypsum in the limestones below Mussoorie1.

The arboreal vegetation of the Siwāliks consists largely of Botany. species occurring both on the lower slopes of the Himālayas and in the hilly districts of Central and Southern India. Epiphytic orchids are absent, and ferns are but few. The Himālayan long-leaved pine (*Pinus longifolia*) is found, and the sāl (Shorea robusta) is here near its western limit and only appears in a stunted form. In the valley a rich vegetation is kept green throughout the whole year. The prevailing forest tree is sāl, and the flora is an interesting mixture of species found in the plains and species from the lower hills. In the Himālayas the vegetation gradually changes at higher elevations to European genera, and the deodār, silver spruce, and weeping pine are found.

The District is singularly rich in animal life, though the Fauna. game has been shot down lately. Wild elephants are found in the Siwāliks, and tigers, leopards, sloth bears, spotted and other deer, and monkeys in the forests. Among game

The scenery of these mountain dales can hardly be surpassed for picturesque beauty even among the lovely slopes of the massive chain to which they belong. On the north, the outer range of the Himülayas rises abruptly to a height of 7,000 or 8,000 feet, with the hill station of Mussuoric and the cantonments of Landour and Chaerata. Siwaliks rise with a more gentle slope on the south-west of the valley, but fall away suddenly to the great plain of the Doas. The other portion of the District is the Jaunsar-Bawar pargana or Chakrata takeil, which strikes north from the outer range of the Himilayas between the valleys of the Tons and Jumna. and consists of a confused mass of ridges and spurs clothed The drainage of launsar-Bawar falls into the Tons or the Jumna, which unite where they penetrate the outer range. The western Dun is drained by the Asan, which falls into the Jumna, and the eastern Dun by a network of

small channels which meet and diverge, again and again, before they join the Ganges. Both the Jumna and Ganges are here rapid rivers pouring over beds of boulders in several channels with islands between.

The Siwālik range is composed in its lower and southern-Geology. most parts of middle Siwālik soft sandstone or sand-rock with a few thin mammalian fossil-bearing conglomerates, and along its crest of thick upper Siwālik conglomerates. These are all of fresh-water origin, and dip at low angles below the flat surface of the valley. The latter is a broad expanse of recent gravels and consolidated fans of scree derived from the higher ranges. On the north of the valley the middle and upper Siwaliks again emerge, bent into sharp reversed folds by faulting against the older Himālayan series. The much-contorted outer Himālayan rocks include the slates and dark-grey limestones or dolomites of the Mussoorie ridge, the Jaunsar series of dark slates, quartzites, fine volcanic ashes, and basic traps, the Deoban massive limestone which comes above the latter and forms much of the rugged elevated country north of Chakrātā, and finally the Mandhata conglomerates and Bawar quartz-schists, which lie flatly above both of the latter series. All these older rocks have proved unfossiliferous and are probably very ancient. Lead and sulphur mines are found on the Tons river at 30° 43' N., and gypsum in the limestones below Mussoorie1.

The arboreal vegetation of the Siwāliks consists largely of Botany. species occurring both on the lower slopes of the Himālayas and in the hilly districts of Central and Southern India. Epiphytic orchids are absent, and ferns are but few. The Himālayan long-leaved pine (Pinus longifolia) is found, and the sāl (Shorea robusta) is here near its western limit and only appears in a stunted form. In the valley a rich vegetation is kept green throughout the whole year. The prevailing forest tree is sāl, and the flora is an interesting mixture of species found in the plains and species from the lower hills. In the Himālayas the vegetation gradually changes at higher elevations to European genera, and the deodār, silver spruce, and weeping pine are found 2.

The District is singularly rich in animal life, though the Fanna. game has been shot down lately. Wild elephants are found in the Siwāliks, and tigers, leopards, sloth bears, spotted and other deer, and monkeys in the forests. Among game

<sup>&</sup>lt;sup>1</sup> H. S. Medlicott, Memoirs, Geological Survey of India, vol. iii, pt. ii, and R. D. Oldham, Records, Geological Survey of India, vol. xvi, pt. iv.

<sup>&</sup>lt;sup>2</sup> Gazetteer of the Himālayan Destricts, 1882, vol. i, chap. vil.

birds may be mentioned the black and grey partridge, peafowl, florican, snipe, woodcock, pheasant, &c. The rivers abound in fish. Mahseer of 40 lb. to 60 lb. weight are frequently caught, and so-called trout  $(roh\bar{u})$  and other species are found in the smaller rivers. The ganch or fresh-water shark is also common.

Clumte and temperature. Extremes of heat and cold in the valley are unknown. The proximity of the Himālayas cools the atmosphere; the bot blasts from the plains do not reach so far, while the heavy mins of the monsoon bring an abundant downpour, and even in May and June occasional showers refresh the country. The eastern Dūn is feverish in the extreme, and is entirely deserted during the rainy season. The temperature in the valley ranges from 37° to tor°, while at Mussoorie it has a range from 27° to 81°.

Rainfall.

The rainfall varies much from one part of the District to another. At Debra it is 89 inches; at Rājpur, near the foot of the Himālayas, 121; at Mussoorie, 96; and at Chakrātā, 80 inches. The annual fall for the whole District averages 195 inches, and any approach to a real drought is unknown within the memory of man.

History.

In the earliest ages of Hindu legend, Dehra Dan formed part of the mythical region known as Kedärkhand, the abode' of the great god Siva, whose sovereignty is still commemorated in the name of the Siwālik Hills. Many generations later, according to the most ancient myths of the Aryan settlers, , the valley became bound up with the two great epics of the Rimāyana and Mahābhārata. Hither came Rāma' and his brother, to do penance for the death of the demon-king, Rīvana; and here soloumed the five Pandava brethren on their way to the inner recesses of the snowy range, where they finally immolated themselves upon the sacred peak of Mahii Panth. Another memorable legend connects the origin of the little river Suswa with the prayers of 60,000 pigmy Brahmans, whom Indra, the rain-god, had laughed to scorn when he saw them vainly endeavouring to cross the vast lake formed by, a cow's footprint filled with water. The indignant pigmies set to work, by means of penance and mortifications, to create . a second Indra who should supersede the reigning god; and when their sweat had collected into the existing river, the irreverent deity, alarmed at the surprising effect of their devotions, appeared their prath through the good offices of Brahms. Traditions of a snake, Bamun, who became lord of the Dan on the summit of the Nagsidh Hill, seem to point

the valley, till the once fertile garden degenerated again into a barren waste. Four Rajas followed one another on the throne; but the real masters were the turbulent tribes on every side, who levied constant blackmail from the unfortunate cultivators.

Meanwhile, the Gurkhas, a race of mixed Nepalese origin, were advancing westward, and reached at last the territories of Garhwill. In 1803 Rājā Parduman Sāh fled before them from Sringar into the Dûn, and thence to Saharanper, while the savage Gurkha host overran the whole valley unopposed. Their occupation of Dehra Dan coincided in time with the Dritish entry into Sahāranpur, and the great carthquake of 1803 proved the miraculous harbinger of either event. The Gurkhas ruled their new acquisition with a rod of iron, so that the District threatened to become an absolute desert. Under the severe fiscal arrangements of the Gutkha governors, slavery increased with frightful rapidity, every defaulter being condemned to lifelong bondage, and slaves being far cheaper in the market than horses or camels. From this unhappy condition the advent of the British rule rescued the feeble and degraded people.

The constant aggressions of the Gurkhas against the frontier compelled the British Government to declare war in 1814. Dehra was immediately occupied, while siego was laid to the hill fortress of Nālāpāni or Kalanda, which fell after a gallant defence, with great loss to the besieging force. The remnant of its brave garrison entered the service of Ranjit Singh, and afterwards died to a man in battle with the Afghans. A resolution of Government, dated November 17, 1815, ordered the annexation of the new possession to Saharanpur; while the Gurkhas, by a treaty drawn up in the succeeding month, formally ceded the country. The organization of the District on the British model proceeded rapidly; and in spite of an ineffectual rising of the disaffected Ghiars and other predatory classes led by a bandit named Kalwa in 1824, peace was never again seriously disturbed. Under the energy and perseverance of its first English officials, the Diln rapidly recovered its prosperity. Roads and canals were constructed; cultivation spread over the waste lands; and the people themselves, awaking from their previous apathy, began to acquire habits of industry and self-reliance. Jaunsar-Bauar, now included in the Chakrata talist, historically an integral portion of Sirmur, land been conquered in the same campaign as the Dun, but was at first erected into a separate charge under a Commissioner subordinate to the Resident at Delhi. In 1829, however, it was incorporated with the present District, of which it has ever since formed a part. The Mutiny of 1857 produced little effect in this remote dependency, cut off by the Siwāliks from direct contact with the centres of disaffection in the Doāb or the Delhi Division; and though a party of Jullundur insurgents, 600 strong, crossed the Jumna into Dehra Dūn, they traversed the District without stopping, and never came into collision with the pursuing troops.

The Asoka inscription at Kālsī has already been referred to. Archaeo-It is of great interest as preserving the names of the kings logy. of western countries who were contemporaries of Asoka. At Madhā on the Jumna, 25 miles north-east of Kālsī, some old temples and interesting remains are found. The chief temple, called Lakkha Mandir, contains two inscriptions which, though undated, probably belong to about A.D. 600 to 800. One of the inscriptions refers to the founding of a temple by a princess of Jullundur in the Punjab¹. An old temple at Rikhikesh, on the Ganges, which is said to have been built by Sankarāchārya, marks a stage on the pilgrim route to Badrīnāth.

The number of towns in the District is 6, and of villages The 416. The population at each Census in the last thirty years people. has been: (1872) 116,945, (1881) 144,070, (1891) 168,135, and (1901) 178,195. The District is divided into two taksīls, Dehra and Chakrātā, the head-quarters of which bear the same names. The chief towns are the municipalities of Dehra and Mussoorie. There are three cantonments: at Dehra, Landour (adjoining Mussoorie), and Chakrātā.

The principal statistics of population in 1901 are shown below:—

	square	Num	ber of	ģ	ii.	ي جو چين	라 다
Tahsīl.	Area in sq miles.	Towns.	Villages.	Population	Population square m	Percentage variation population tween 18 and 190	Number persons a to read a
Dehra Chakrātā	731 478	4 2	377 39	127,094 51,103	174 107	+ 8.2 + 0.8	12,188 393
District total	1,209	6	416	178,195	147	+ 6.0	12,581

Of the total population, 83 per cent. are Hindus, 14 per cent. Musalmāns, 1-8 per cent. Christians, and 0-8 per cent. Aryas. Western Hindī is the principal language in the valley.

<sup>1</sup> Epigraphia Indica, vol. 1, p. 10.

while almost the whole of the people in the hills speak the Jaunsari dialect of Central Pahari.

Castes and occupations.

The most numerous caste is that of Rājputs, who humber 32,000, or more than one-fifth of the total number of Hindus (1,18,000), which is a high percentage for this caste. Chamārs (leather-workers and labourers) number 21,000; Brāhmans, 17,000; and Koris (weavers and labourers), 12,000. Out of a Muhammadan population of 25,000, Shaikhs number 8,000 and Pathāns 5,000. In the hill tracts of the District, Brāhmans and Rājputs are divided, as in Kumaun, into the Khas branch and the ordinary divisions of these castes, the former being looked on as aboriginal. Among the Khas Rājputs polyandry is commonly practised. Of other castes peculiar to the District may be mentioned the Bājgīs (singers and musicians), 6,000; and the Doms (aborigines, now labourers), 8,000.

Christian missions. The number of native Christians is 1,305, while there are 1,829 Europeans and Eurasians. The principal missions, with the dates of their foundation, are those of the American Reformed Presbyterian Church at Dehra (1852) and Rājpur (1868); the Church Missionary Society at Annfield, with two out-stations (1857); and the Methodist Episcopal Church at Mussoonie, with six out-stations (1859). Nearly half the native Christians belong to the last named.

General
agricultural cunditions.

In the hills, tillage is chiefly confined to the valleys or to terraces on the mountain slopes artificially irrigated by dams and canals. In the valley agriculture is carried on much as it is in the plains; but the Dün cultivator, except in the Dehra plateau, is wanting in energy and skill. His cattle are weak, the holdings are small, and methods rude. There is some fine land in the eastern Dün; but the valley as a whole is not a good wheat country, and rains crops and emps with lung tap-roots do best. The surface soil is, as a rule, shallow, and below it lies a gravel subsoil which soon drains away the moisture from the upper layers. The ordinary crop seasons in the valley are the same as in the plains, but harvest is a month or two later.

Chief agrientired statistics and principal crops.

The main agricultural statistics for 1903-4 are given below, in square miles:—

Tiche	И.	Total.	Irrigated.	Cultivable ware.	Porests.	
Dehra . Chaktātā	• •	731 478	,1.22   31	35 2	139 7	278 142
ļ	Total	1,209	153	37	246	420

The staple food-grains are wheat, rice, marua, and barley; the areas under which in 1903-4 were 54, 32, 22, and 16 square miles. Maize, gram, and jowar are also important food-crops, with a total area of 15 square miles. Oilseeds were grown on to square miles, and tea plantations covered 8 square miles. In the hills, ginger, turmeric, and chillies are valuable crops.

The District does not produce any surplus of grain for export, Improveand there is in fact a considerable import, especially since the ments in agriculgrowth of Mussoorie and the extension of the railway. Dams tural pracmade of wooden frames filled with boulders have been success-tice. fully used to prevent erosion by torrents. The tea industry is not very flourishing, owing to the loss of the market in Afghānistān and Central Asia. Experiments in the cultivation of rhea fibre and in sericulture have not proved a success, and grants of waste land to European settlers have not been remunerative, largely owing to the difficulty of obtaining labour. Very few advances are taken under the Agriculturists' Loans Act: the amount lent in 1902 was only Rs. 5,000, and usually there are no loans. No money has been borrowed under the Land Improvement Loans Act.

There are no special breeds of cattle or horses. Cattle-Cattle, breeding has been tried without success, and an attempt to horses, sheep, and improve the breed of sheep also failed. Goats are kept in very goats. large numbers, and are penned on the land in the hills to supply manure. Owing to its cool climate, Dehra is a favourite place for keeping racing stables during the hot season.

Of the total cultivated area, 22 square miles are irrigated Irrigation from Government canals and 15 from rivers and small reservoirs made by damming streams. There are only twenty-nine wells in the whole District, and the canals supply drinking-water as well as irrigation. The canals are small works, being improvements and restorations of watercourses made long before British rule. The principal channels are the Bijapur, drawn from the lesser Tons, a small stream in the centre of the valley; the Katāpāthar, from the Jumna; and the Raipur, Kalanga, and Jakhan, from streams in the eastern Dun. The first of these was made as early as 1839. Till 1903 these canals were supplied by means of temporary dams, but permanent heads have now been constructed. Owing to the steep slopes and nature of the soil, erosion and percolation made masonry channels necessary; but the slopes are being reduced by providing falls, and the cost of extensions will be smaller. The total capital expenditure to the end of 1903-4 was 8 lakhs; and in that year the gross income

waste. The taksil is well irrigated by the Upper Ganges Main Canal and the Deoband branch. In 1903-4 the area under cultivation was 334 square miles, of which 127 were irrigated.

Kairana Tahsil.-North-western talisi! of Muzaffarnagur District, United Provinces, lying between 20° 10' and 20° 42' N. and 77° 2' and 77° 30' E., with an area of 464 square miles. It comprises five parganas-Kairana, Thinihana. Shamli, Thana Bhawan, and Bidauli-and was formerly known as Shamli. Population increased from 200,157 in 1891 to 221.679 in 1901. The latist contains five towns: namely, KATRANA (population, 19,30.1), the head-quarters, THANA BHAWAN (8,861), SHAMLI (7,478), JALALABAD (6,822), and THINJHANA (5,094); and 256 villages. In 1903-4 the demand for land revenue was Rs. 3.86.000, and for cesses Rs. 50.000. The river Jumpa forms the western boundary, and the adjoining tract lies low and is intersected by itals and watercourses. The castern half of the tainst is, however, part of the upland tract and is irrigated by the Eastern Jumna Canal. In 1003-4 the area under cultivation was 201 square miles, of which 131 were irrigated.

Jünsath Tahsil.— South-eastern tahtil of the Muzassar nagar District, United Provinces, lying between 29° 70' and 29° 36' N. and 77° 36' and 78° 6' E., with an area of 451 square miles. The population increased from 193,533 in 1891 to 216,411 in 1901. The tahtil contains four towns: namely, Khatauli (population, 8,695), Mirānpur (7,209), Jānsath (6,507), the tahtil head-quarters, and Bhūrarhiras (6,316); and 244 villages. In 1903-4 the demand for land revenue was Rs. 3,60,000, and for cesses Rs. 47,000. The Ganges bounds the tahtil on the east, and the low land on the bank of the river is swampy; but the greater part lies on the upland and is protected by the Upper Ganges Main Canal and the Anūpshahr branch. In 1903-4 the area under cultivation was 307 square miles, of which 115 were irrigated.

Budhana Tahsal.—South-western tahsal of Muzasar magar Instrict, United Provinces, lying between 59° 12' and 29° 26' N. and 77° 9' and 77° 42' E., with an area of 287 square miles. The population increased from 172,088 in 1891 to 197,034 in 1901. There are two towns with a population exceeding 5,000—Kānnhla (11,573) and Budhāna (6.664), the tahsal head-quarters; and 149 rillages. In 1903-4 the demand for land revenue was Rs. 4,09,000, and for cesses Rs. 50,000. The tahsal is the most thickly populated in the District, supporting 686 persons per square mile.

1

as compared with a District average of 527; it is also the most closely cultivated. The Eastern Jumna Canal and the Deoband branch of the Upper Ganges Canal provide canal-irrigation. In 1903-4 the area under cultivation was 235 square miles, of which 104 were irrigated.

Bhūkarherī.—Town in the Jānsath tahsil of Muzasiarnagar District, United Provinces, situated in 29° 30' N. and 77° 57' E., 15 miles from Muzasiarnagar town. Population (1901), 6,316. The inhabitants are chiefly Jāts, who attained considerable power in the days of Pathān supremacy. There is an old tomb of a saint who is reverenced throughout Northern India by the Hindus as Gharīb Nāth, and by the Muhammadans as Gharīb Shāh.

Budhana Town.—Head-quarters of the tahsil of the same name in Muzassarnagar District, United Provinces, situated in 29° 17′ N. and 77° 29′ E., 19 miles south-west of Muzassarnagar town. Population (1901), 6,664. During the Mutiny the place was held by the rebels, but was retaken in September, 1857. It lies close to the Hindan, but the main site is raised, and is fairly healthy. The town is administered under Act XX of 1856, with an income of Rs. 1,000. Besides the tahsili, it contains three schools and a dispensary.

Charthāwal.—Town in the District and taksil of Muzassar, united Provinces, situated in 29° 33′ N. and 77° 36′ E., 7 miles north-west of Muzassarnagar town. Population (1901), 6,236. Under native rule it was the head-quarters of an āmil. It is now a small agricultural town, administered under Act XX of 1856, with an income of about Rs. 1,500.

Jalālābād.—Old town in the Kairāna tahsil of Muzassarnagar District, United Provinces, situated in 29° 37' N. and 77° 27' E., 21 miles from Muzaffarnagar town. Population (1901), 6,822. It is said to have been founded by a Pathān named Jalāl Khān in the reign of Aurangzeb. A mile away lie the ruins of the celebrated fort Ghausgarh, built by the Rohilla leader, Najib Khān, with a beautiful mosque which was built by his son, Zābita Khān. Jalālābād was often sacked by the Marathas during the rule of Zābita Khān, and a Marāthā still holds a small grant close by. During the Mutiny the Pathans of this place remained quiet, and one of their leaders did good service as talistidar of Thana Bhawan after its capture. town is administered under Act XX of 1856, with an income of about Rs. 2,300. There are two schools, with more than 100 pupils.

Jansath Town.—Head-quarters of the label of the same name in Muzassarnagar District, United Provinces, situated in 29° 19' N. and 77° 51' E., 14 miles from Muzassarnagar town. Population (1901), 6,507. The town is samous as the home of the Jänsath Saiyids, who held the chief power in the Delhi empire in the early part of the eighteenth century. Jänsath was sacked and destroyed by a Rohilla force, under the orders of the Wazir Kamar-ud-din, in 1737, and many Saiyids were slain or exiled; but some of their descendants still live in the town. It is administered under Act XX of 1856, with an income of about Rs. 2,000. Jänsath contains a tahtili, an Anglo-vernacular school opened by private subscription, and a dispensary. Much has been done lately to improve the place by paving the streets and the drains.

Jbinjhāna.—Town in the Kairāna tahstī of Muzassarnagar District, United Provinces, situated in 29° 31' N. and 77°, 13' E., on the left bank of the Kathā, 30 miles from Muzassarnagar town. Population (1901), 5,094. The town is the home of a family of Shaikhs who have resided here from an early date. It contains a dargāh of a Muhammadan saint built in 1495 and several monuments of the Shaikhs, the chief being a mosque and tomb built in 1623, decorated with coloured tiles. Jhinjhāna is administered under Act XX of 1856, with an income of about Rs. 1,700. It was formerly very dirty; and although the streets have recently been paved, it is still unhealthy.

Kairana Town.—Head-quarters of the taket of the same name in Muzassarnagar District, United Provinces, situated in 29° 24' N. and 77° 12' E. It is the terminus of a metalled road from Muzasfarnagar town. The population is increasing slowly and was 19,301 in 1901. Mukarrah Khāu, physician to Jahangir and Shah Jahan, received the town and surrounding country as a grant. He built a dargah and laid out a beautiful garden with a large tank, and the town also contains several mosques dating from the sixteenth and seventeenth centuries. Kairana is built partly on the low-lying Jumpa khadar and partly on the rising slape to the upland plain, and has a clean, well-paved bazar. The town was constituted a municipality in 1874. During the ten years ending 1901 the income and expenditure averaged Rs. 12,000. In 1903-1 the income was Rs. 16,000, chiefly derived from octroi (Rs. 12,000), and the expenditure was Rs. 18.000. Ornamental curtains are made here by pasting small pieces of looking-glass on coloured cloth. There is a considerable amount of traffic in grain with both the Panjab and the railway, and a small calico-printing

1

industry. Besides the takstle, there are a munifi, a dispensary, and two schools.

Kändhla.—Town in the Budhära tahsil of Muzasiarnagar District, United Provinces, situated in 29° 19' N. and 77° 16' E., near the Eastern Junna Canal. 29 miles south-west of Muzasiarnagar town. Population (1902), 11,563. It is situated on low ground and the neighbourhood is swampy. The more important streets are metalled and drained. Kändhla was constituted a municipality in 1872. The income and expenditure during the ten years ending 1901 averaged Rs. 6,700. In 1903-4 the income was Rs. 11,000, chiefly derived from octroi (Rs. 6,600); and the expenditure was Rs. 11,000. There is a considerable local trade in grain, cotton, and cloth, which is manufactured here. The tahsili school had 130 pupils in 1904.

Khatauli.-Town in the Jansath taksil of Muzasiarnagar District, United Provinces, situated in 20° 17' N. and 77° 44' E., on the North-Western Railway and on the road from Population is increasing steadily, and Meerut to Roorkee. was 8,605 in 1901. The town is of some age, and contains four large Jain temples and a large sarai built by Shāh Jahan. It first became of importance during the Bihar samine of 1874, when all the surplus grain in the District was exported from the milway station. The streets have recently been paved and masonry drains constructed. Khatault is administered under Act XX of 1856, with an income of about Rs. 3,000. Its trade is chiefly connected with the export of grain and sugar, and is largely in the hands of Jain merchants. The talistii school has 64 pupils, and an aided Inin school 38.

Mīrānpur.—Town in the Jūnsath tahsīl of Muzassanagar District, United Provinces, situated in 29° 17' N. and 77° 57' E., 20 miles from Muzassanagar town. Population (1901), 7,209. It is the home of a samily of Saiyids, descended from a member of the Chhatrauri branch of the samous Bārha Saiyids. Early in 1858 it was attacked by the Bijnor rebels, but successfully held by British troops. Mīrānpur is administered under Act XX of 1856, with an income of about Rs. 2,000. At one time there was a large local trade in rice, sugar, salt, and grain; but the opening of the railway has diverted trade to Khatauli and Muzassanagar. Blankets are still made to a large extent, and also coarse blue pottery and papier maché goods. There are two small schools.

Muzassaruagar Town.—Head-quarters of the District and talish of the same name, United Provinces, situated in

20° 28' N. and 77° 41' E., on the main road from Meent to Roorkee and Hardwar, and on the North-Western Railway. The population is increasing rapidly: (1872) 10,703, (1881) 15,080, (1891) 18,166, (1901) 23,444. In 1901 Hindus numbered 12.847 and Musalmans 9,519. The town was founded by the son of Muzaffar Khān, Khūn-i-Jahān, in the reign of Shah Jahan, about 1633, close to the site of an older town known as Sarwat. It remained a place of little importance. until in 1824 it became the head-quarters of a sub-collectors fin of Saharanpur District, and two years later Muzaffarmagar District was formed. It is a closely-built lown, crowded with small streets, but is well situated on high land above the Kall Nadi, to which the drainage is carried. Desides the ordinary offices, there are a town hall, high and middle schools. and male and female hospitals. There are no resident officials besides those of the ordinary District staff. The American \_-Presbyterian and Reformed Methodist Missions have branches Muzosfarnagar was constituted a municipality in 1872. The income and expenditure during the ten years ending 1901 averaged Rs. 22,000. In 1903-4 the income was Rs. 35,000, chiefly derived from octroi (Rs. 21,000) and house tax (Rs. 6,000); and the expenditure was Rs. 16,000. A drainage and paving project was completed in 1003 at a cost of more than Rs. 30,000, and the town is now very well drained. The place owes its prosperity largely to the export trade in wheat and sugar, and the only considerable manufacture is that of blankets. Every year in March a horse show is held here. The high school contains 230 pupils, the takstit school 160, and a girls' school 35.

Pur.—Town in the District and talist of Muzasiarnagar, United Provinces, situated in 29° 39' N. and 77° 51' En 16 miles north of Muzasiarnagar town on the metalled road to Roorkee. Population (1901), 6,384. The town is surrounded by fine groves and contains some good brick houses, but the drainage is defective. In the low waste land close by an important camp is formed for artillery practice every cold season. The town is administered under Act XX of 1856, with an income of about Rs. 1.500.

Shāmli.—Town in the Kairāna tahsil of Muzasfaruagar District, United Provinces, situated in 29° 27' N. and 77° 18' E., on the metalled road from Muzasfaruagar town to Kairāna. Population (1901), 7,478. It was originally known as Muhammadpur Zanardār, and formed part of the grant made to Mukarrab Khān, physician to Jahāngīr and

Shih Jahan. The town was built later by a follower of Mukarrab Khān's called Shyām. In 1794 it was the residence of a Maratha commandant, who was suspected of intriguing with the Sikhs. Lakwa Dada, the Maratha governor, sent George Thomas against the town. Thomas stormed it, and killed the commandant and his principal adherents. In 1804 Colonel Burn was surrounded near this place by an overwhelming force of Marathas, who were joined by the inhabitants, but he was relieved by the opportune advance of Lord Lake. During the Mutiny the taksildar of Shamli gallantly held the town and kept communications open for several months, but was defeated and slain by the Shaikhzādas of Thana Bhawan in September, 1857. The head-quarters of the talisti and munsifi have been removed to Kairana, owing to a terrible epidemic of fever. The place was once a municipality, but decayed, and is now administered under Act XX of 1856, the income being about Rs. 2,500. Four schools are maintained.

Thana Bhawan.—Town in the Kairana taksil of Muzaffarnagar District, United Provinces, situated in 20° 35' N. and 77° 25' E., 18 miles north-west of Muzasfarnagar town on an unmetalled road. Population (1901), 8,861. In the Ain-i-Akhari the pargana is called Thana Bhim; but the present name is said to be derived from an old temple of Bhawani, which is still much resorted to. The town was a centre of disaffection in 1857, when the inhabitants, headed by their Kāzī, Mahbūb Alī Khān, and his nephew, Ināyat Alī, broke into open rebellion. Among other daring feats, they captured the talistil, then at Shami, and massacred the 113 men who defended it. Thana Bhawan was soon after taken by the Magistrate, with some Sikh and Gurkha levies, after a fight of seven hours. The walls and gates were levelled to the ground and no further disturbances took place. The town decayed after the Mutiny, but the population has increased during the last thirty years. It contains a primary school and some seventeenth-century mosques and tombs. administered under Act XX of 1856, the income from house tax being about Rs. 2,500.

Meerut District (Merath). - District in the United Pro-Bounvinces, lying between 28° 33' and 29° 18' N. and 77° 7' and daries, configuration, 78° 12' E., with an area of 2,354 square miles. It is bounded and river on the north by Muzasiarnagar District and on the south system. by Bulandshahr, while the Ganges divides it on the east from Moradatiad and Bijnor, and the Jumna on the west from the

Punjab Districts of Karnāl and Delhi. On the banks of these great rivers are stretches of inferior low-lying khādar land. The rest of the District is, for the most part, a level upland, the edges of which are scored by ravines. This may be divided into three main tracts. The western division, stretching almost to the Upper Ganges Canal, has an extraordinarily rich and uniform soil, except immediately above the rivers Jumna and Hindan. East of this lies a shallow depression with poor natural drainage. The third tract, extending to the high banks of the Ganges, is characterized by the presence of sandy dunes, which are scattered in various directions in the eastern portion, but form a well-defined ridge in the west.

Besides the Jumna and the Ganges, the most important river is the Hindan, which runs through the west of the District and has a considerable area of khādar land. Two small streams called Chhoiyā, and a cut called the Abū Nālā, carry off part of the drainage of the central depression and the eastern tract into the ill-defined bed of the Kātā Natū (East). In the extreme east of the District the Būrhgangā, or 'old Ganges,' forms a chain of swamps close below the old high bank.

Geology.

Meerut is situated entirely in the Ganges alluvium, and kankar and saline efflorescences are the only minerals.

Botany.

The botany of the District presents no peculiarities. There is very little natural jungle, and grazing land is chiefly found in the Ganges and Jumna *khādars*, and to a less extent along the Hindan. The District is, however, well wooded, and groves cover 21 square miles. The commonest-tree is the mango, but the *bel* and grava are largely grown for fruit, and the *shīsham* is planted in the road and canal avenues.

Fauna.

Leopards are fairly common in the Ganges khādar and ravines, but tigers are extremely rare. Antelope are numerous in most parts of the District: Meerut is famous for wild hog, and the pig-sticking competition held annually for the Kādir (khādar) Cup in March or April is well-known. Other animals found include the wolf, fox, jackal, hog deer, and nikai-Game birds are numerous. Duck and teal are found along the Būrhgangā and other rivers, and in the larger swamps in the interior. Snipe, geese, black and grey partridges, quail, pigeons, and sand-grouse are also common.

Climate and temperature.

The comparatively high latitude and elevated position of Meerut make it one of the healthiest Districts in the plains of India. From November to March the weather is cool and invigorating, hoar-frost being frequently found in Japuary at an

carly hour of the day. The hot westerly winds begin in April, and the rains set in about the end of June. The mean temperature is about 77°, ranging from 57° in January to 91° in May or June.

The District is practically the meeting-place of the Bengal Rainfall, and Bombay monsoon currents. The annual minfall for thirty years has averaged 29 inches; but it varies in different parts, and the south-west of the District receives less than the north-east. Considerable fluctuations occur, and in five years ending 1895 the average was 47 inches, while it sometimes falls below 20 inches.

The District is connected with the earliest traditions of the History. Lunar race of the Hindus. A small hamlet on the high bank of the Ganges is believed to mark the main site of Hustinapur. the capital of the Knuravas and Pandavas, which was washed away by the Ganges. The Asoka pillar, now standing on the ridge at Dr.L.11, is said to have been removed from near Meerut city, and remains of Buddhist buildings have been discovered near the Jama Masjid. In the eleventh century A.D. the south-western part of the District was held by Har Dat. the Dor Rājā of Baran or Bulandshahr, who was defeated by Mahmud of Ghazni in 1018. According to tradition, the north of the District was held by the Tagas, who were driven south and east by the lats. The Meos were called in by the Gahlots and expelled the Dors. The first undoubted Muhammadan invasion was that of Kutb-ud-din, the general of Muhammad Ghorf, in 1192, when the city of Meerut was taken and all the Hindu temples were converted into mosques. Under succceding Sultans we hear little of the District, which may therefore be considered to have escaped any notable misfortune, until the Mongol invasion of 1398. Timur swooped down upon Meerut with more than ordinary barbarity, and was met with equal Hindu obstinacy. At the fort of Loni, many of the Rajouts burned their houses, with their women and children within, and then sallied out to sell their lives as dearly as they could. After the capture, Timur ordered the massacre of all the Hindu prisoners in his camp, whom he himself represents as numbering 100,000 persons. He then went on to the sack of Delhi, and returned to the town of Meerut, then ruled by an Afghan chief named Ilias. Timur first made his approaches by mining, and on the second day carried the walls by storm. All the males were put to the sword, and the fortifications and houses of the Hundus mized to the ground. Thence his army proceeded northward along the

two great rivers, taking every fort, town, and village they passed.

The firm establishment of the Mughal dynasty in the. sixteenth century, and the immediate neighbourhood of their court, gave Meerut a period of internal tranquillity and royal The valley of the Jumna became a favourite hanting resort for the imperial family and their great officers. Pleasuregardens and game-preserves were established in the low-lying tracts just opposite Delhi; while it was for the purpose of watering one of these that the Eastern Jumna Canal was first designed. After the death of Aurangzeb, Metrut, though nominally subject to the Delhi emperor, was really ruled by local chieftains: the Saivids of Muzassarnagar in the north. the Jats in the south-east, and the Gujars along the Ganges and in the south-west. It was also exposed to the same horrors of alternate Sikh and Maratha invasions which devastated the other parts of the Upper Doab; while the Jats and Rohillas occasionally interposed, to glean the remnant of the plunder which remained from the greater and more fortunate hordes.

From 1707 till 1775, Meerut was the scene of perpetual strife; and it was only rescued from anarchy by the exemions of a European military adventurer, Walter Reinhardt or Sombre, one of the many soldiers of fortune who were tempted to try their destinies in Upper India during the troubled decline of the Delhi dynasty. After perpetrating the massacre at PATNA, 1763. Reinhardt established himself at SARDHANA in one of the northern parganas of Mecrut; and on his death in 1778 left his domains to his widow, generally known as the Begam Sumrū, from the assumed name of her husband. This remarkable woman was of Arab descent, and originally followed the trade of a dancing-girl. After hermarriage with Reinhardt, she was baptized into the Ruman Catholic Church, to which she became a considerable benefactress. Meanwhile, the southern portion of the District still remained in its anarchic condition under Maratha rule, until the fall of Delhi in 1803, when all the country in the possession of Sindhia between the Jumna and the Ganges was ceded to the British. The Regam, who had up till that time given assistance to Sindhia, thereupon made submission to the new Government, to which she remained constantly faithful till her death in 1836.

Meernt has few historical incidents to show during the early British period; but it has been rendered memorable by

the active part which it took in the Mutiny of 1857, being the place where the first outbreak occurred in Upper India. From the beginning of the year disquieting rumours had been affoat among the native troops, and the greased-cartridge fiction had spread widely through their ranks. In April, a trooper named Brijmohan informed his comrades that he had used the new cartridges, and all would have to do so shortly; but within a few days Brijmohan's house was set on fire, and from that time acts of incendiarism became common. On May 9, some men of the 3rd Bengal Cavalry, who had refused to use the cartridges, were condemned to ten years' imprisonment. Next day. Sunday, May 10, their comrades took the fatal determination to mutiny; and at 5 p.m. the massacre of Europeans in the city began.

The subsequent events belong rather to imperial than to local history, and could not be adequately summed up in a brief resume. It must suffice to say that, throughout the Mutiny, the cantonments remained in the hands of the British forces, and the District was on the whole kept fairly clear of rebels. Meerut was more than once threatened by Walidad Khān, the rebellious chieftain of Mālāgarh in Bulandshahr District; but his demonstrations were never very serious. The greatest peril lay in the threatened attack by rebels from Rohilkhand, which was successfully warded off. Indeed, it is a noticeable fact that the very city where the Mutiny broke out, and where the first massacre took place, was yet held by a small body of Europeans, surrounded by thousands of disaffected natives, under the very shadow of Delhi, from the beginning to the end of that desperate struggle.

Though many places are connected by tradition with the Archaeo-events related in the Mahäbhärata, such as Hastināpur, logy. BĀGHPAT, GARIMUKTESAR, PARĪCHHATGARH, Pūth, and Barnāwā, very ancient temples or other archaeological remains have not been discovered. A mosque built by Balban stands at Garhmuktesar, and there are a few Muhammadan buildings dating from the Mughal dynasty at Meerut.

The District contains 27 towns and 1,494 villages. The The population is rising steadily. The number at the last four people enumerations was as follows: (1872) 1,276,167, (1881) 1,313.137, (1891) 1,391.458, and (1901) 1,540,175. The increase in the last decade (10-6 per cent.) was six times as great as the Provincial average. There are six tahsils—Meerut, Ghāziābān, Mawānā, Bāghpat, Sardhana, and Hārur—the head-marters of each being at a town of the

same name. The chief towns are the municipalities of Medrut, the District head-quarters, Hāpur, Sardhana, Ghāziābād, Mawānā, and the 'notified areas' of Baraur, Bāchpat, Pilkhuā, and Shāhdanā. The principal statistics of population in 1901 are shown below:—

	Music E9.	N	mlı <del>cı</del> of		1	'S = 4 -	104
Taheil,	Area in my miles,	Towar	Villages,	Popularian	Population pe	Percentage variation population there 150 and 150.	Number of
Meerut . Ghāriābād . Mawānā . Bāghpat . Sardhana . Hāpur .	364 493 431 405 250 411	59461	250 333 248 218 124 292	342,143 276,518 200,399 297,506 180,141 243,468	940 562 465 735 721 592	+ 4.9 +11.9 +12.7 +14.4 + 6.8 +14.8	18,048 7,122 3,397 7,285 5,198 6,010
District total	2,354	27	1,494	1,540,175	654	+10.7	47,951

Of the total population, 74 per cent. are Hindus, 23 per cent. Musalmans, 1 per cent. Jains, 8 per cent. Christians, while Aryas number 5,000. The great density in the Meerut taissil is due to the large city of Meerut, while Mawana, which has the lowest density, includes a considerable area of Ganges khādar. More than 99 per cent. of the inhabitants speak the Hindustāni dialect of Western Hinds.

Castes and occupa-

Among Hindus the most numerous caste is that of the Chamārs (leather-dressers and labourers), who number 223,000, and form 20 per cent. of the Hindu population. They are followed by the Jats, 184,000, who are the most industrious agriculturists and hold a larger area both as proprietors and cultivators than any other caste. Brahmans number 121,000; Rājputs, 79,000; Baniās, 59,000; Gūjars, 58,000; Tagās, 41,000; Ahirs, 25,000; and Bhangis or sweepers, 44,000. The Jats, Gujars, and Tagas are not found in the centre and . east of the Provinces, and the Tagās (agriculturists) are more numerous here than in any other District. The most numerous Muhammadan tribe is that of the Shaikhs, 50,000; followed by Rājputs, 46,000; Julāhās (weavers), 33,000; Pathāns, 19,000; Saivids, 15,000; and Tagas, 20,000. More than 49 per cent. of the population are supported by agriculture, 11 per cent. by general labour, 10 per cent. by personal services, 3 per cent. by weaving, and nearly 3 per cent. by grain-dealing.

Christian missione.

In 1907 there were 9,315 native Christians in the District, of whom 7,400 were Methodists and 1,100 Roman Catholics.

The four missions at work are the Roman Catholic, the Church Missionary Society, the American Methodist, and the Reformed Presbyterian Churches. Sardhana is the chief station of the Roman Catholics, who commenced work there at the end of the eighteenth century under the Begam Sumru. The Church Missionary Society's mission dates from 1815, and the other two missions are of recent institution. The latter admit converts easily, and chiefly labour among the lower classes.

As is usual in the Upper Doah, the Jats are the best General cultivators, and all good land is manured whether near the agriculvillage site or not. The soil varies from sand to thick clay; ditions. but the greater portion is a fertile loam, and most of the District is capable of irrigation from capals or wells. The Ganges and Tumna and, to a smaller extent, the Hindan khūdars are precarious tracts; but the District as a whole ranks as one of the finest in the United Provinces.

The tenures are those common in the United Provinces, Chief More than 50 per cent. of the total area is held in bhairachara agricultenure; nearly 22 per cent. in imperfect pattidari; and the statistics rest in perfect pattidari and samindari in equal proportions, and princi-The main statistics of cultivation in 1903-4 are shown below, pal crops, in square miles :-

Wheat and gram are the most important food-grains, covering an area of 634 and 241 square miles respectively, or 36 and 14 per cent. of the net area cropped. Maize and jewür, with 189 and 164 square miles, are also important. The most valuable of the other crops are sugar-cane (179 square miles) and cotton (60 square miles).

In the khadar, cultivation depends chiefly on the season, Improveand in dry years considerable areas may be sown. The strik-ments in ing feature of the District during the last thirty years is the taral increase by about 50 per cent in the area under sugar-cane, practice. which is now the crop from which the tenants pay their rent

and the zamindars their revenue. The area cropped in two consecutive harvests in the same year, especially with make in the autumn and wheat mixed with peas, &c., in the spring. is also increasing. The area under cotton has declined, and indigo is grown only by a few of the large community. There is a small, but steady, demand for loans under the Agriculturists' Loans Act, amounting to about Rs. 2,000 annually; but advances under the Land Improvement Loans Act are rarely taken. Out of Rs. 16,000 advanced during the ten years ending 1000. Rs. 11,000 was advanced in the last year. ' A great deal has been done to improve the drainage of the District by deepening and straightening some of the rivers, such as the East Kall Nadi and its tributaries, the two Chhoirs, and by making cuts in other places. In the south-west of the District an embunkment has been made to prevent flooding from the Jumna.

Catale, horses, and sheep,

Private enterprise has done something to improve the ordinary inferior breed of cattle, and several samindars have imported good bulls from Hissan. The best of the cattle have been imported from the same place, but many good animals are now bred locally. Horse-breeding has become, an important business. Stables for a Government stud were established at Habügarh near Hapur in x823, and many cantit. dars turned their attention to horse-breeding. The mates were subsequently disposed of, though stallions are still kept by Government. There has been a considerable improvement in ... the last thirty years, and chargers are bred for the native cavalry and mounted police. Besides the stallions at Babugarh, twelve others were maintained by Government in 1903, ... when the supervision of horse-breeding was transferred from the Civil Veterinary to the Remoint department. mules are also bred from Government donkey stallions. sheep and goats of the District are of the ordinary inferior ' breed.

Irrigation.

About 40 to 60 per cent. of the cultivated area is irrigated according to the season. In 1903-4 canals irrigated 494 square miles, wells 271, and other sources 10. The west of the District is supplied by the Eastern Jumpa Carat, the centre by the Upper Ganges Canal, and the east by the Anapshahr branch of the latter. Canals have to a large extent superseded wells; and the area irrigated in the eastern tract has benefited especially, as well-irrigation was rure. It is only in parts of the Sardhana and Hāpur rahals that well-irrigation supplies a larger area than canals.

The chief mineral product is kankar, which occurs in blocks Minerals. as well as in nodules, and is used for road-metalling and for making lime, as well as for building purposes. Up to 1833 salt was largely manufactured, and a little saltpetre is still prepared. The saline efflorescence called rek, which contains curbonate of soda, is used for making country glass, and also in dycing and washing clothes.

The most important industry is tanning, though there is Arts and no large tannery. Much of the out-turn is exported to Cawn-nardapore and Calcutta, but a fair amount is made up on the spot into shoes and sent to Delhi. Cotton-weaving is carried on largely at Mecrut and several other places, but only for the local market. More than half the raw cotton grown is exported to Campore and Calcutta. Two cotton presses at Hapur employed 263 persons in 1904. The North-West Soap Company. Limited, at Meerut employs about forty hands, and an ice factory about twenty. There are also eleven indigo factories, and a small flour-mill and oil-mill. Blankets are made at Nirpura in the Sardhana talisil, ornamental pottery at Bahādurgarh in the Hapur talist, and cheap cutlery, glass bangles, lowellery, and furniture are turned out at a few centres.

The exports consist chiefly of wheat, sugar, oilseeds, and Commerce. cotton, while the imports are metals, cotton cloth, building materials, ekt., drugs, and spices. The municipalities are the chief centres of trade, especially Meerut, Hapur, and Ghazi-Internal traffic is very large. The sugar goes largely to the Punjab and Rajputana, while wheat is exported to Europe. A large proportion of the trade finds its way to Delhi. Timber and bamboos are brought to Meerut from the forests farther north by the Upper Ganges Canal and the Ganges.

Trade has been greatly fostered by the improvement of Railways communications. The oldest railway is the East Indian, which and roads. just cuts across the south-west corner of the District. followed by the North-Western, which passes through the middle. In 1900 a branch of the Oudh and Rohilkhand Railway was opened, which traverses the southern part. Another important branch of the same line connects Meerut city with Hapur, and will be continued through BULANDSHABR to

Knurja. The rich tract between the North-Western Railway and the Jumna is to be opened up by a light railway from Shahdam on the East Indian Railway opposite Delhi to Sahārangur.

The total length of metalled roads is 216 miles, which is only exceeded in one District in the Provinces; of these, og miles are Provincial and the rest local. There are also 302 miles of unmetalled roads maintained from Local funds. There are avenues of trees along about 180 miles. The western part of the District is most in need of better communications. which will be supplied by the light milway referred to above.

Famine.

The Upper Doab was ravaged by famine at frequent intervals before British rule, and the disorder of the eighteenth century frequently caused distress; but Meerut is not specially mentioned by the native historians. There was frequent distress in the early years of the nineteenth century, and the famine of 1827 was exceptionally severe. In 1860, after the disastrous effects of the Mutiny, famine was imminent; but. the milway works in the south-east of the District gave employment to thousands. The famines of 1868 and later years hardly affected the District adversely, and relief works have. chiefly been required for starving immigrants. This result is largely due to the perfect system of canal-irrigation, and the sturdy nature of the peasantry. In 1896-7, when famine raged elsewhere, the Jats of Meerut prayed openly for a continuance of the high prices which gave them such handsome profits.

District subdivisions and staff.

The Collector is usually assisted by a Toint and Assistant Magistrate belonging to the Indian Civil Service, and by five Deputy-Collectors recruited in India, all residing at Mecrut-There is a tahsildar at the head-quarters of each of the six talisīls.

Civil crime.

The District and Sessions Judge has jurisdiction over the justice and whole District, and also civil jurisdiction over the Sikandrabad takel of Bulandshahr District. He is nided by an Assistant Judge, a Subordinate Judge, and two Munsils. In 1904 there were two additional Munsifs, and an additional Judge was sanctioned for three years. A few village Munsifs have also been appointed. There is a special Cantonment Magistrate, with an assistant, at Mecrut. As usual, the most common forms of crime are burglary and petty theft; but murder, robbery, and dacoity are more frequent than in most Districts. Cases of rioting and criminal trespass are very common, and the Gujars in the Ganges and Jumna khadurs are notorious cattle thieves. Female infanticide was practised by Gdjats and Jats, especially the former, but has nearly died out.

Land fetende administration.

The area comprised in the District was acquired in 1803. and was at first administered as part of Saharanpur, of which it eventually formed the southern division with a Collector at Meerut. In 1818 a separate District was made, which was

further subdivided in 1824 by the removal of parts of what are now Bulandshahr and Muraffarnagar. The early land revenue settlements were simply based on the previous demands, and consisted of two for a year each and two for three years each, the last being extended up to 1815, when a settlement was effected for five years. No records exist of the subsequent arrangements till the first regular settlement was made between 1835 and 1837. There were signs of the coming competition for land, but rents were still mostly in The assessment was based on rates ascertained by converting average produce at market values, the rates being modified according to the condition of villages. A large part of the District had formed the jagir of the Begam Sumra, which lapsed in 1836. Her system had been one of rackrent, qualified by an intimate knowledge of the cultivators and liberal advances. The total demand fixed for the whole District was 18-3 laklis. The second settlement was made between 1865 and 1870, when the demand was raised to 21.8 lakhs, though the share of the rental 'assets' taken had been reduced from 70 to 50 per cent. In this settlement, also, rates were calculated on produce, having regard to soil classification. The last settlement was completed in 1901. It was based on the rental 'assets,' but involved a careful soil classification and the fixing of standard circle rates, which were of special importance, as nearly half of the area was not subject to cash rents, most of it being under proprietary cultivation. A very minute analysis of the rents actually paid was thus required, and the proportionate rental value of different soils was ascertained. The rents paid by occupancy tenants were enhanced in many cases, and the revenue finally fixed was 29.9 lakhs, representing 48 per cent, of the corrected rental 'assets.' The incidence per acre of cultivation is Rs. 2-14-0. being the highest for any District in the Provinces. varies in different parts from Rs. 2 near the Ganges khādar to more than Rs. 4 in the west. The collections on account of land revenue and total revenue are shown below, in thousands of rupces:-

	1880-t.	1890-1.	tg00-1.	190,1~4
Land revenue	22,25	22,11	26,30	27,95
	27,04	34.00	40,57	44,31

Besides the five municipalities, Mecrut. Ghāziābād, Hūpur. Local self-gorem-Sardhana, and Mawānā, four other towns which were formerly ment.

municipalities became 'notified areas' in April, 1904. There are also eighteen towns administered under Act XX of 1856. Beyond the limits of these places, local affairs are managed by the District board, which has an income of more than 2 lakls. In 1903-4 the expenditure amounted to 2.6 lakbs, of which 1.1 lakls was spent on roads and buildings.

Police and jails.

The District Superintendent of police is aided by an Assistant and six inspectors. There are 160 other officers and 633 men belonging to the regular police, 439 municipal and town police, and 2,267 village and road police. The District jail contained a daily average of 574 prisoners in 1903.

Education.

In 1901 the percentage of the population able to read and write was 3-1 (5-6 males and 0-3 females), which is exactly the Provincial average. The proportion is, however, unduly raised by the considerable number of Jains, Aryas, and Christians in the District, and is distinctly lower in the case of Hindus (2-7) and Muhammadans (2). In 1880-1 there were 214 public institutions with 6,677 pupils, and these had increased to 248 institutions with 9,849 pupils in 1900-1. In 1903-4, 277 such schools contained 12,850 pupils, of whom 550 were girls; and there were besides 391 private institutions with 5,235 MEERUT CITY contains an Arts college, a normal pupils. school, and three high schools. Of the public institutions, 152 are managed by the District or municipal boards and only 2 by Government. About half the total expenditure on education of Rs. 96,000 is met from Local and municipal funds, and a quarter from fees.

llospitals and dispensades. In 1903 there were 14 hospitals and dispensaries, with accommodation for 183 in-patients. In the same year 134,000 cases were treated, of whom 1,839 were in-patients, and 10,214 operations were performed. The expenditure was Rs, 19,000, chiefly met from Local and municipal funds.

Vaccion-

More than 50,000 persons were successfully vaccinated in 1903-4, showing a rate of 33 per 1,000 of population. Vaccination is compulsory only in the municipalities and in the cantonment of Mecrut.

[H. R. Nevill, District Gasetteer (1904); R. W. Gillan, Settlement Report (1901).]

Meernt Tahsil.—Central northern tahsil of Meernt District, United Provinces, co-extensive with the pargana of Meerut, and lying between 28° 52' and 29° 14' N. and 77° 27' and 77° 52' E., with an area of 364 square miles. On the west the Hindan divides it from the Baghpat and part of the Sardhana

taksils, but other boundaries are artificial. The population rose from 326,054 in 1891 to 342,143 in 1901. There are 280 villages and five towns, of which MEERUT (population, 118,129), the District and tabsil head-quarters, and Lawar (5,046) In 1903-4 the demand for land are the most important. revenue was Rs. 5,22,000, and for cesses Rs. 87,000. tulist has the highest density of population (940 persons per square mile) in the District (average 654), owing to the inclusion of Mecrut city. Along the Hindan there is a narrow stretch of khūdar which is liable to deterioration, but more than half the taksil is a level upland of first-class soil. The eastern portion is intersected by the East Käli Nadi and its tributaries the two Chboiyas and the Abū Nālā, which flow in badly-defined channels. The channel of the Kali Nadi has been deepened and straightened, and other cuts have been made: but the drainage is still defective, and in this tract cultivation is continually interrupted by patches of reh. It is sandy towards the north, and a well-defined sandy ridge strikes from north to south on the eastern border. Between the Hindan and the Kali Nadi the Upper Ganges Canal provides ample means of irrigation; but east of the Kali Nadi the villages depend chiefly on wells, most of which are of masonry. In 1903-4 the area under cultivation was 277 square miles, of which 122 were irrigated.

Ghāziābād Tahsil.—South-western tahsil of Meerut District, United Provinces, comprising the farganas of Jalalabad, Loni, and Dasna, and lying between 28° 33' and 28° 56' N. and 77° 13' and 77° 46' E., with an area of 493 square miles. The Jumna forms the western boundary. The population rose from 247,141 in 1891 to 276,518 in 1901. contains 332 villages and nine towns, of which the most important are Guazianan (population, 11,275), the taksil headquarters, Pilkhuā (5,859), Shāhdara (5,540), and Farid-NAGAR (5,600). In 1903-4 the demand for land revenue was Rs. 4.85,000, and for cesses Rs. 80,000. The tahsil is one of the poorest in the District, the density of population being only 562 persons per square mile, while the District average is 654. The Hindan passes through the western portion and the Chhoiya, a tributary of the East Kali Nadi, through the east. The worst tract, a sandy area cut up by ravines, lies between the Hindan and the Jumna; but the north-east corner, which forms a badly-drained basin, is also very poor. On the other hand, communications by both railway and road are excellent. The tahsil is well supplied by irrigation from the Upper Ganges

and Eastern Jumna Canals. In 1903-4 the area under cultivation was 349 square miles, of which 180 were impated Indigo is a more important crop here than elsewhere, while sugar-cane is less grown than in the rest of the District.

Mawana Tahsil.—North-eastern tahsil of Mecrat District. United Provinces, comprising the parganas of Hustinapur and Kithor, and lying between 28° 50' and 29° 16' N. and 77" 47 and 78° 8' E., with an area of 431 square miles. The population rose from 177,868 in 1891 to 200,399 in 1901. There are 248 villages and four towns, the largest of which are MAWANA (population, 9,207), the taket head-quarters, Paricu-HATGARH (6,278), and PHALAUDA (5,214). In 1903-4 the demand for land revenue was Rs. 3,56,000, and for cesses Rs. 57,000. The taksil is the most sparsely populated in the District, containing only 465 persons per square mile against an average of 654. It consists of two distinct portions. The greater part lies in the upland area, which descends by a series of ravines to the Ganges khadar on the east. The uplands are intersected by well-marked ridges of sand, and have profited enormously by the irrigation supplied from the Anapshalir branch of the Upper Ganges Canal, as wells are difficult and costly to make. The khādar is damp, and immediately below the edge of the upland lies a series of swamps marking an old bed of the Ganges, which now flows on the eastern boundary; a great part of it is fit only for grazing. In 1903-4 the area under cultivation was 273 square miles, of which 89 were irrigated.

Baghpat Tahsil,—North-western taksil of Mecrut District United Provinces, comprising the parganas of Baghpat, Baraut, Kutānā, and Chhaprauli, and lying between 28° 47 and 29° 15' N. and 77° 7' and 77° 29' E., with an area of 405 square miles. The population rose from 259,656 in 1891 to 297,506 in 1901-There are 218 villages and six towns, the chief of which are BARAUT (population, 7,703), BAGHPAT (5,972), the takail headquarters, KHEKRA (8,918), and CHHAPRAULT (7,058). In-1903-4 the demand for land revenue was Rs. 6,65,000, and ... for cesses Rs. 1,07,000. The density of population is high, being 735 persons per square mile. The talstil lies between the Jumna and Hindan; but even the narrow khadars of those rivers are fairly fertile, and a great part consists of an excellent loam, while ample irrigation is provided by the Eastern Jumna Canal. In 1903-4 the area under cultivation was 336 square miles, of which ruo were irrigated.

Sardhana Tahsil.—Tithsil of Meenst District, United

Provinces, comprising the farganas of Sardhana and Barnawa, and lying between 29° 1' and 29° 16' N. and 77° 19' and 77° 43' E., with an area of 250 square miles. The population rose from 168,692 in 1891 to 180,141 in 1901. There are 124 villages and only one town, Sardhana (population, 12,467), the tahsil head-quarters. In 1903-4 the demand for land revenue was Rs. 3,70,000, and for cesses Rs. 59,000. The tahsil is thickly populated, supporting 721 persons per square mile. It lies in the north of the uplands of the District, and its two farganas are separated by the river Hindan, which is also joined by the Krishal. Both these rivers are fringed with ravines; but the tahsil is a fertile tract, well irrigated by the Upper Ganges and Eastern Jumna Canals. In 1903-4 the area under cultivation was 201 square miles, of which 82 were irrigated.

Hapur Tahsil.—South-eastern tahsil of Meerut District, United Provinces, comprising the parganas of Hapur, Sarawa, Garhmuktesar, and Püth, and lying between 28° 35' and 28° 54' N. and 77° 41' and 78° 12' E., with an area of 411 square miles. The population rose from 212,047 in 1891 to 243,468 in 1901. There are 292 villages and two towns, HAPUR (population, 17,706), the Jahsil head-quarters, and GARHMUKTESAR (7,616). In 1903-4 the demand for land revenue was Rs. 4,04,000, and for cesses Rs. 68,000. The density of population is low for this District, being only 592 persons per square mile. On the east there is a considerable area of khādar land bordering on the Ganges, which forms the eastern houndary. Above this lies a broad stretch of upland, much of which is intersected by ridges of sand; but irrigation from the Anupshabr branch of the Upper Ganges Canal has rendered the cultivation of most of this productive. In the east the Kill Nadi runs through high bhūr, and other streams flow in narrow deeply cut channels. Many drains have been made to carry off the flood-water from above, but the tract is still precarious. In 1903-4 the area under cultivation was 320 square miles, of which 112 were irrigated,

Sardhana Estate.—An important estate in Meerut District, United Provinces. The area of the estate is about 28 square miles. The total demand for rent and other dues in 1904 was 1-3 lakhs, while the Government land revenue and cesses amounted to Rs. 53,000. The head-quarters of the estate are at Sardhana Town. It belongs to a family of Muswi Saiyids, who claim descent from Ali Mūsī Razī, the eighth Imām. These Saiyids resided at Paghmān near Kābul, but were ex-

pelled on account of services rendered to Sir Alexander Rumes in his Kabul mission, and subsequently to the British in the retreat from Kābul. A pension of Rs. 1,000 a month was given to the family, which settled at Sardhana. During the Mutiny Saiyid Muhammad Jan Fishan Khan, the head of the family, raised a body of horse and did good service both in Meerut District and before Delhi. As a reward the title of Nawab Bahadur, and confiscated estates assessed at Rs. 10.000 per annum, were conferred on Jan Fishan Khan, with concessions as to the revenue assessed. The pension was also made permanent. During the lifetime of the first Nawab, and for some time after, the family added largely to the estate but speculations in indigo and personal extravagance caused losses. The estates were taken under the Court of Wards in 1805, and in 1901 the debts, amounting to 10 lakhs, were paid off by a loan from Government. The present Nawab, Snivid Ahmad Shah, and his two predecessors were sons of Jan Fishan Khan, who died in 1864.

Baghpat Town.—Head-quarters of the tahsil of the same name, in Meerut District, United Provinces, situated in 28th 57' N. and 77° 13' E., near the Jumna, 30 miles west of Mecrot city by a metalled road. Population (1901), 5,072. Baghpat is identified with the Vyäghraprastha, or 'place of tigers' of the Mahābhārata, and its name is said to have been changed from Bagpat to Baghpat by one of the Delhi emperors. The town is divided into two portions: the kasha or agricultural quarter, and the mandi or commercial quarter. Besides the tahsili, it contains a dispensary, and a branch of the American Methodist From 1869 to 1904 the place was administered as a municipality, with an average income and expenditure of Rs. 6,000, the chief tax being octroi. It has now been constituted a 'notified area,' Formerly Baghpat was the chief centre of the sugar trade with the Punjab, but Meerut and other towns have now taken its place to a large extent. To 1904 it contained three schools with 137 pupils.

Baraut.—Town in the Büghpat taksil of Meerut District, United Provinces, situated in 29°6' N. and 77° 16' E., 27 miles north-west of Meerut city. Population (1901), 7.703. During the Mutiny some of the Jäts who owned the town were conspicuous for disloyalty, and their property was confiscated and now forms part of the Sardhana Estate. The town is situated in a network of canal distributaries, and irrigation is forbidden near it for sanitary considerations. The American Presbyterian Mission has a branch here. Baraut was adminis-

tered as a municipality from 1870 to 1904, the average income and expenditure being about Rs. 6,500. Under its new constitution as a 'notified area,' a tax on circumstances and property has been substituted for octroi. Iron buckets and cauldrons are made here, and there was formerly a large trade in ght and sufflower. In 1904 the town contained a middle school with 120 pupils, and three aided primary schools with 140 pupils.

Chhaprauli. — Town in the Băghpat tahsil of Meerat District, United Provinces, situated in 29° 12' N. and 77° 11' E., 35 miles north-west of Meerat city. Population (1901), 7,058. It is said to have been founded by Jāts in the eighth century. In the eighteenth century the Jāts of Mīrpur, who had been almost ruined by the incursions of the Sikhs, migrated here, and added to the population and prosperity of the town. There is a large colony of Jain Banias, who are people of some wealth. The town is administered under Act XX of 1856, with an income of about Rs. 2,000. It is increasing in importance as a centre for the collection and export of wheat and sugar. There is a primary school.

Faridingar.—Town in the Chaziabad takit of Meerut District, United Provinces, situated in 28° 46' N. and 77° 41' E., 16 miles south-west of Meerut city. Population (1901), 5,620. It was founded by Farid-ud-din Khan in the reign of Akbar. It is administered under Act XX of 1856, with an income of about Rs. 1,600, and contains a primary school.

Garhmuktesar .- Town in the Hapur talist of Meerut District, United Provinces, situated in 28° 47' N. and 78° 6' E., near the Ganges, on the Oudh and Rohilkhand Railway and the Delhi-Moradabad road. Population (1901), 7,616. The place is said to have been part of Hastingpur, the great city of the Kauravas; but the site now pointed out as Hastinapur is 25 miles away. It contains an ancient fort, which was repaired by a Maratha leader in the eighteenth century. name is derived from the great temple of Mukteswam Mahadeo, dedicated to the goddess Ganga, which consists of four principal shrines, two on the Ganges cliff and two below it. Close by is a sacred well whose waters are said to cleanse from sin, surrounded by eighty out! pillars. The principal festival is held at the full moon of Kartik, when about 200,000 pilgrims collect, the numbers being much larger at intervals of six, twelve, and forty years. The cost of the fair is met from a fart on carts and cattle, and the rent of shops. Horses were formerly exhibited, but the numbers are decreasing. On the other hand,

mules are now brought in increasing numbers. The town also contains a mosque built by Ghiyās-ud-dīn Balban in 1283, and a branch of the American Methodist Mission. Garhmuktesar is administered under Act XX of 1856, with an income of about Rs. 2,000. There is little trade except in timber and bamboos, which are rafted down the river from the Dūn and Garhwāl.

Ghāziābād Town.—Head-quarters of the fahsil of the same name in Meerut District, United Provinces, situated in 28° 40' N. and 77° 26' E., on the grand trunk road from Calcutta to Peshawar, and a junction for the East Indian. North-Western, and Oudh and Robilkhand Railways, ' Population (1901), 11,275. It was founded in 1740 by the Wazir Ghāzī-ud-dīn, son of Asaf Jāh, ruler of the Deccan, and was formerly called Ghāzī-ud-din-nagar. In 1763 Sūraj Mal, the Int Raja of Bharatpur, met his death at the hands of the Rohillas near this place. In May, 1857, a small British force from Mecrut encountered and defeated the Delhi rebels, who had marched out to hold the passage of the Hindan. The main site contains two broad metalled bazars at right angles, with masonry drains and good brick-built shops. Extensions have recently been made, including two fine markets, called Wrightganj and Wyerganj, after the Collectors who founded them. The police station and town hall are located in the large sarai built by Ghazi-ud-din. There is also a dispensary. Near the station the railway companies have built several barracks and houses. The Church Missionary Society and the American Methodists have branches here. Ghāziābād has been a muni-During the ten years ending 1901 the cipality since 1868. income and expenditure averaged Rs. 13,000. In 1903-4 the income was Rs. 17,000, chiefly derived from octroi (Rs. 13,000), and the expenditure was Rs. 18,000. There is a considerable trade in gmin, hides, and leather. The town contains an-Anglo-vernacular school, supported by the Church Missionary Society, with 120 pupils in 1904, a faksili school with 147, eight aided primary schools with 211, and a girls' school with 27 pupils.

Hāpur Town (or Hāpar). — Head-quarters of the takst of the same name in Meerut District, United Provinces, situated in 28° 43' N. and 77° 47' E., on the metalled road from Meerut to Bulandshahr, and on the Morādāhād-Delhi branch of the Oudh and Rohilkhand Railway. The population rose from 14,977 in 1891 to 17,796 in 1901. Hindus number 10,038 and Musalmāns 7,518. The town is said to have

been called Haripur after Har Dat, the Dor chicking who founded it late in the tenth century; but another derivation is from hoper, meaning 'the orchard,' It formed part of the justr of Perron, the French general in the service of the Maratha chief Sindhia. He established a system of grants for his disabled veterans, which was maintained by the British for many years. In 1805 Ibrāhim Alf, the tahsildar, defended the place against Amir Khan, the Pindari freebooter. During the Mutiny, Walidad Khan of Malagarh threatened Hapur, but was obliged to retire by the loyal Jats of Bhatauna. The town is surrounded by several fine groves, and the site in the centre near the Jama Masjid, which was built during the reign of Aurangzeh, stands high. Around the town are numerous small excavations often full of stagnant water, and the largest of these is connected with the Chhoiva Nala, a tributary of the Kali Navi (East), which drains most of the town. The drainage system has been greatly improved of late years. principal public offices are the taksili, dispensity, and Angloveruacular school. The Church Missionary Society and the American Methodist Mission have branches here. was constituted a municipality in 1872. During the ten years ending 1001 the income and expenditure averaged Rs. 17,000. In 1903-4 the income was Rs. 25,000, chiefly derived from actroi (Rs. 17,000), and the expenditure was There is considerable local trade in sugar, grain, cotton, hamboos, and brass vessels. Two steam cotton-gins employ 263 hands. In 1904 there were eleven schools with 408 pupils.

Khekrā.—Town in the Baghpat tahsil of Meerut District, United Provinces, situated in 28° 52' N. and 77° 17' E., 26 miles west of Meerut city. Population (1901), 8,918. It is said to have been founded 1,600 years ago by Ahirs, who were ousted by Jäts from Sikandarpur. In the Mutiny the owners rebelled, and the land was confiscated. The place is administered under Act XX of 1856, with an income of about Rs. 2,000. It is rising in importance as a centre of the grain and sugar trade. There is a primary school with 60 pupils.

Lāwar. — Town in the District and labil of Meerut, United Provinces, situated in 29° 7' N. and 77° 47' E., 12 miles north of Meerut city. Population (1901), 5,046. It belongs to the descendants of Mir Surkh, a native of Mazandarān, who acquired forty-five villages in the neighbourhood. It contains a fine house, called the Mahal Sarai, built about 1700 by Jawāhir Singh, who also excavated the Sūrai

Kund (tank) at Meerut. Lawar is administered under Act XX of 1856, with an income of about Rs. 1,500. In 1904 the primary school had 80 pupils.

Mawānā Town.—Hend-quarters of the tahsil of the same name in Meerut District, United Provinces, situated in 29°6'N, and 77°57'E., 17 miles north-east of Meerut city. Population (1901), 9,207. The town, according to tradition, was founded by Mana, a huntsman employed by the Kauravas. It combins a large brick-built tank, and on the banks of another, now ruined, stands a fine temple built in the sixteenth century. The municipality was constituted in 1886. During the ten years ending 1901 the income and expenditure averaged Rs. 5,000. In 1903-4 the income was Rs. 7,000, chiefly from a tax on circumstances and property (Rs. 3,000), and the expenditure was Rs. 8,000. There is little trade, and most of the inbabitants are cultivators. The town contains two middle schools with 136 pupils, hesides six primary schools with 164 pupils. The American Methodist Mission has a branch here.

Meerut City. — Administrative head-quarters of Meerut District, United Provinces, and military cantonment, situated in 29° 1′ N. and 77° 43′ E., 970 miles by rail from Calcuta and 931 miles by rail from Rombay. The city is the seventh largest in the United Provinces, and its population has risen considerably during the last thirty years. The numbers at the four enumerations were as follows: (1872) 81,386, (1881) 99,565, (1891) 119,390, and (1901) 118,129. The population in 1907 included 62,700 Hindus, 50,317 Muhammadans, and more than 4,000 Christians. Of the total, 78,740 persons reside in the municipality and 39,389 in cantonments.

The derivation of the name is uncertain. According to one account it is derived from an architect named Maha, in the time of king Yudhishthira. The Jats allege that it was founded by a colony of their easte belonging to the Maharashtra golea. The Asoka pillar now standing on the ridge at Delhi waremoved from Meerut, and remains of Buddhist buildings have been found near the Jama Masjid. Meerut is said to have been captured early in the eleventh century by Saiyid Salar Masūd; and about the same time Har Dat, Rājā of Baron (Rulandshaha), built a fort here, which was one of the most celebrated in Hindustan for its strength. The fort was captured by Kuth-ud-din in 1192, and all the Hindu temples were converted into mosques. In 1327 a Mongol chief, Tarmshirin Khān, made an unsuccessful attempt on the city, but it was

completely sacked and destroyed by Timur in 1399. Mughal rule the place revived and several fine buildings were erected. The brick fort is mentioned in the Ain-i-Akhari, and Akbar struck copper coin at Meerut. The troubled times of the eighteenth century were unfavoumble to the growth of towns in the Upper Doab, and in 1805 it was described as 'a ruinous, depopulated town, and a place of no trade.' In 1806 cantonments were first established, and population grew rapidly to 20,014 in 1847 and 82,035 in 1853. Meerat obtained an unenviable notoriety in 1857 as the spot where the Mutiny broke out in Upper India. Disquieting rumours had been abroad for some time, and in April the troopers of the 3rd Cavalry refused to use the new cartridges. On May 9, eightyfive men were condemned to long terms of imprisonment; and the next afternoon, Sunday, May 10, a cry was raised that the Europeans were going to seize the magazines of the Native Infantry. The men of the 20th Native Infantry took up arms, and the Mutiny commenced. Several Europeans were shot down at once, and the bad characters of the city gathered together, armed with any weapons they could find. 'The convicted troopers were released from jail without the slightest opposition by the guards, and the rest of the prisoners broke out. The infuriated mob of sepoys, police, hangers-on about the bazars, servants, and convicts burned and plundered the cantonments, murdering every Christian they met. In the civil station, which lies some distance away, nothing was known of the outbreak until close on 7 p.m., when the people going to church saw the blaze of burning bungalows. Even the native troops posted there remained steady till relieved. The British troops cantoned near the civil lines included a regiment of cavalry, 800 infantry, and a large force of artillery; but nothing was done by the superior military authorities, and the general organization was defective. Many of the Carabineers could not tide, and there was a want of horses. Much time was wasted in a roll-call, and when the native lines were reached after dark, they were found descried. No pursuit was attempted, and the mutineers were allowed to reach Delhi The town was, however, held throughout the in safety. disturbances, and was the base of a small volunteer force known as the Khāki Risālā, which helped materially in the restoration of order.

The native city lies south of the cantonments and east of the railway line. The streets are generally of mean appearance, and are badly arranged. The oldest monuments are a mausoleum and dargih creeted by Kuth-ud-din in 1194, the former in the city, and the latter about a mile away on the site of a famous temple to Nauchandi Debi. The Jāma Masjid is said to have been built in 1019 by Hasan Mahdi, Wazir of Mahmud of Ghazni, and was repaired by Humāyūn. A fine dargūh of red sandstone was erected by Nūr Jahān, wife of the emperor Jahāngīr, in 1628, in memory of a fakir named Shāh Pir, and there are some other seventeenth-century mosques and tombs. The great tank called the Sūraj Kuud, or 'sun tank,' constructed in 1714, is surrounded by numerous small temples and sait pillars.

The town hall, containing the Lyall library, is an imposing building, the foundation-stone of which was hid in 1884 by the Duke of Connaught, then commanding the Meetut military In the cantonments the finest building is the church. which was built in 1821, and has a handsome spire. There are also a Roman Catholic church and a mission chapel, an asylum for the relief of distressed European and native Christians, and a club. The Mall is one of the finest station roads in India. Besides being the head-quarters of the ordinary District staff. Meerut is the residence of the Commissioner of the Division of the same name, Superintending Engineers of both the Roads and Buildings and Irrigation branches of the Public Works department, and two Executive Engineers in charge of divisions of the Upper Ganges Canal. The Church Missionary Society and the American Methodists have their principal stations here, besides several branches in the District.

Meerut was constituted a municipality in 1864. During the ten years ending 1901 the income and expenditure averaged about 2-3 lakhs; but the receipts include a loan of 7½ lakhs for water-supply in 1895, and the expenditure includes the cost of the works and an annual sum on account-of capital and interest. In 1903-4 the total income was 2-2 lakhs, chiefly derived from actroi (1-4 lakhs) and municipal property, fines, &c (Rs. 41.000). The expenditure of 2-5 lakhs included general administration (Rs. 2,000), collection of taxes (Rs. 31,000), water-supply (Rs. 21,000), conservancy (Rs. 21,000), public safety (Rs. 15,000), and repayment of loans with interest (Rs. 65,000). A house tax has recently been sanctioned.

The water-works were completed in 1896. The supply is taken from the Upper Ganges Canal, 9 miles away, at a place called Bhola. The engines by which the supply is raised are worked by turbines turned by the water in the canal fails. In 1903-4 the daily consumption of water amounted to between

4 and 5 gallons per head. The drainage of the city is good, and all channels have been lined with masonry and the whole system recast within the last few years.

The normal garrison in the cantonments consists of four regiments of British and native cavalry and infantry, and two horse and two field batteries. The income of cantonment funds in 1903-4 was 1-4 lakhs, and the expenditure 1-2 lakhs. The chief taxes are octroi and a house tax.

The prosperity of the city was originally due to the presence of a large cantonment and the population was in fact larger in 1853 than in 1872. The extension of the North-Western Railway in 1867 and 1860, however, laid the foundation of a more extended trade than the supply of local needs. In 1887 a bonded warehouse was opened about a mile from the city station, with which it is connected by a branch line, and 8 or 9 lakhs of maunds of grain, and nearly as much sugar, pass through this every year. Cotton cloth, building materials, oilseeds, spices, and ghi form the chief imports. Manufactures are not yet of much importance, but there are a large soap factory and a flour and oil mill. An important agricultural show is held annually near the Nauchandt temple, a mile from the city. The exhibits include 1,800 horses, besides cattle, agricultural products and implements, &c., and valuable prizes are given.

The chief educational institutions are the Meerut College and the normal school. The former was founded in 1892 at a cost of 2 lakhs raised by subscriptions, and receives an annual grant of Rs. 8,000 from Government. It had 123 pupils in 1903-4, of whom 15 were reading for a degree and 35 were in the First Arts classes. The oldest school belongs to the Church Missionary Society and has 120 pupils. There are eight other secondary schools with about 800 scholars, and four primary schools with 159 pupils, of whom over 100 are girls. Among the secondary schools may be mentioned that supported by the Arya Samāj, which is very strong here. The municipality spends about Rs. 10,000 annually on education.

Parichhatgarh.—Town in the Mawānā tahsīl of Meerut District, United Provinces, situated in 28° 59' N. and 77° 57' E., 14 miles cast of Meerut city. Population (1901), 6,278. The four round which the town is built lays claim to great antiquity; tradition ascribes its construction to Parkhshit, grandson of Arjuna, one of the five Pāndava brethren in the Mahābhārata, to whom is also attributed the foundation of the town. The

fort was restored by Rājā Nain Singh on the rise of Gnjar power in the eighteenth century. It was dismanded in 1857, and is now used as a police station. The town is adminic tered under Act XX of 1856, with an income of about Rs. 1,700. The trade is local. There are branches of the Church Missionary Society and the American Methodist Mission, and two primary schools.

Phalauda.—Town in the Mawinā tuhsil of Meerut District, United Provinces, situated in 29° 11' N. and 77° 51' E, 17 miles north of Meerut city. Population (1901), 5,214. It is said to have been founded by a Tomar named Phalgu, whose descendants were dispossessed by Mir Surkh, a Persian from Mazandarān. The town is a poor place, with narrow dirty streets, but has fine mango groves surrounding it. There is a dargūh of a saint called Kuth Shāh, where a religious fair is held annually, and the Church Missionary Society has a branch here. Phalauda is administered under Act XX of 1856, with an income of about Rs. 1,300. It contains a primary school with 75 pupils in 1904.

Pilkhuā.—Town in the Ghāziābād taksīl of Meerut District, United Provinces, situated in 28° 43' N. and 77°, 40' E., 19 miles south of Meerut city on the Oudh and Robilkhand Railway, and on the metalled road from Delhi to Moradābād. Population (1901), 5,859. The town is budly drained and surrounded by stagnant pools, though a small drainage cut has been made. It contains branches of the Church Missionary Society and the American Methodist Mission. From 1872 to 1904 it was administered as a municipality, with an income and expenditure averaging about Rs. 3,000, lut. it has now been declared a 'notified area.' The chief manufacture is country cloth, which is specially noted for a peculiar pattern made by dyeing. There is also a considerable trade in leather and shoemaking, and the products are exported as far as Calcutta and Bombay. In 1904 there was an aided primary school with 35 pupils.

Sardhana Town.—Hend-quarters of the tohal of the same, name in Meerut District, United Provinces, situated in 29° 9' N. and 77° 38' E., on a metalled road 12 miles north-west of Meerut city and 6 miles from the Sardhana station on the North-Western Railway. The population rose from 12,059 in 1891 to 12,467 in 1891.

The place is now of small importance, but it was once famous as the residence of the Begam Sumru. According to tradition, the town was founded by a Rājā Sarkut, whose family

ruled till their expulsion by the Musalmans. The plant became the property of Dhusars and Bishnots, who were driven out by Tagus in the eighth century. Walter Reinhardt, botter known by the sobriquet of Sombre or Summi, was a butcher by profession, and a native of Luxemburg. He came to India as a suddier in the French army, and deserting that service, took employment with the British, where he attained the mak of sergeant. Descring again, he rejoined the French service at Chandersagore, and on the surrender of that settlement accompanied M. Law in his nanderings throughout India from 1757 to 1760. In the latter year Law's party joined the army of Shah Alam in Bengal, and remained with the emperor until his defeat in 1760 near Gaya by Colonel Carnac. Sumra next entered the service of Mir Kasim, by whom he was cmployed to murder the English prisoners at Patna (Patna Distrator) in October, 1763. He succeeded in escaping into Oudh, and afterwards served several native chiefs, until in 1777 be entered the service of Mirza Nataf Khan, the general and minister of Shah Alam II, and received the farguna of Sardhana in fief, as an assignment for the support of his battalions. He died here in the following year, and was succeeded by his widow, the Begam Sumre, who continued to maintain the military force. This remarkable woman, the illegitimate daughter of a Musalman of Arab descent, and the mistress of Reinhardt before becoming his wife, assumed the entire management of the estate, and the personal command of the troops, which numbered five battalious of sepays. about 200 European officers and gunners, with 50 pieces of cannon, and a body of irregular horse.

In 1781 the Begam was haptired into the Roman Catholic Church, under the name of Johanna. Her troops reodered excellent service to the Delhi emperor in the battle of Gokulgarh in 1788, where a charge of Sauthana troops, personally led by the Begam and the celebrated adventurer George Thomas, saved the fortunes of the day at a critical moment. In 1792 the Begam married Levassoult, a Frenchman in command of her artillery. In 1795 her European officers became disaffected, and an illegitimate son of Reinhardt, known as Zafaryāb Khān, put himself at their head. The Begam and her husband were forced to fig. In the flight the Begam's palanquin was overtaken by the rebels, and she stabbed herself to prevent falling alive into their hands: where upon Levassoult shot himself, in pursuance of a vow that if one of them was killed the other would commit suicide. The

Begam's wound, however, was but a slight one, and she was brought back to Sardhana. Another account is that the Begam had become tired of her husband, and that her self-inflicted wound was only a device to get rid of him. However, all her power passed temporarily into the hands of Zafaryāb Khān, and she was treated with great personal indignity, till she was restored to power some months later by George Thomas. Henceforth the Begam remained in undisturbed possession of her estates till her death in 1836.

After the battle of Dolhi, and the British conquest of the Upper Doab in 1803, the Begam submitted to the new rulers, and ever after remained distinguished for her loyalty. Her nossessions were numerous, and included several considerable towns, such as Sardhana, Baraut, Baroawa, and Dankaur, lying in the immediate neighbourhood of great marts like Meerut, Delhi, Khutja, and Baghpat. Her income from her estates in Meerut District alone amounted to £56,721 per She kept up a considerable army, and had places of residence at Khirwa-Jalalpur, Meerut, and Delhi, besides her palace at Sardhana. She endowed with large sums the Catholic Churches of Madras, Calcutta, Agra, and Bombay, the Sardhana Cathedral, the Sardhana poorhouse, St. John's Roman Catholic College, where natives are trained for the priesthood, and the Meerut Catholic Chapel. She also made over a lakh of rupees to the Bishop of Calcutta for charitable purposes, and subscribed liberally to Hindu and Musalman institutions.

Zafaryāb Khān, the son of Sumrū, died in 1802, and left one daughter, whom the Begam married to Mr. Dyce, an officer in her service. David Ouchterlony Dyce Sombre, the issue of this marriage, died in Paris, July, 1851, and the Sardhana estates passed to his widow, the Hon. Mary Ann Forester, daughter of Viscount St. Vincent. The palace and adjoining property have since been purchased by the Roman Catholic Mission, and the former is used as an orphanage.

The town itself lies low, and has a poor and decayed appearance. Immediately to the north is a wide parade-ground, beyond which is the quarter called Lashkarganj, founded by the Begam as a cantonment for her troops, and the old fort now in ruins. East of the town lies the Begam's palace, a fine house with a magnificent flight of steps at the entrance and extensive grounds. It formerly contained a valuable collection of paintings, but these have been sold; some of them are now in the Indian Museum, and others in Government House,

Allahabad. The Roman Catholic Cathedral is an imposing building. The public offices include the taksili, post office, and police station. In addition to the Roman Catholic Mission, the American Methodists have a branch here.

Sardhann was constituted a municipality in 1883. come and expenditure during the ten years ending 1901 averaged Rs. 11,000. In 1903-4 the income was Rs. 15,000, chiefly from octroi (Rs. 10,500), and the expenditure was Rs. 13,000. The trade is entirely local, except for the export of grain. The town contains a middle school with 183 pupils, and six primary schools with 280 pupils.

[H. G. Kecne, Calcutta Review, January and April, 1880.]

Shahdara.—Town in the Ghaziabad tahsil of Meerut District. United Provinces, situated in 28° 40' N. and 77° 18' E., on the East Indian Railway, 5 miles from Delhi. A light rallway to Sahāranpur is being constructed. Population (1901), 5.5.40. It was founded by Shah Jahan as a market, and was sacked in the eighteenth century by Sūraj Mal, the Tat Raja of Bharatpur, and plundered by the soldiers of Ahmad Shāh Durrāni just before the battle of Pānīpat. It is badly drained, and drinking-water is obtained from a distance. The American Methodist and Reformed Presbyterian Missions linve branches here. From 1872 to 1904 Shahdara was administered as a municipality, with an income and expenditure averaging about Rs. 3,000. It is now a 'notified area.' The trade of the place has fallen away, and it is chiefly celebrated for sweetmeats; but there is still a small manufacture of shoes and leather, and a little sugar-refining. 1904 there was a primary school with 75 pupils.

Bulandshahr District.—District in the Meerut Division, Boun-United Provinces, lying between 28° 4' and 28° 43' N. and daries, configuration, 77° 18' and 78° 28' E., with an area of 1,899 square miles, and river It is situated in the Doan or alluvial plain between the system. Ganges and Jumna, which form its eastern and western boundaries, dividing it from Moradabad and Budaun Districts, and from the Punjab Districts of Delhi and Gurgaon, respectively. On the north and south lie Mecrut and Aligarh Districts. The central portion forms an elevated plain, flanked by strips of low-lying land, called khādar, on the banks of the two great rivers. The Jumna khādar is an inferior tract, from 5 to 10 miles wide, except in the south, where the river flows close to its eastern high bank. The swampy nature of the soil is increased in the north by the two rivers, HINDAN and Bhuriya, but flooding from the Jumna has been prevented

by the embankments protecting the head-works of the Agra Canal. The Ganges khādar is narrower, and in one or two places the river leaves fertile deposits which are regularly cultivated. Through the centre of the upland flows the Kālī Nadī (East), in a narrow and well-defined valley which suffers from flooding in wet years. The western half contains a sandy ridge, now marked by the Māt branch of the Upper Ganges Canal, and two drainage lines known as the Patwai and Karon or Karwan. The castern portion is drained by another channel called the Chhoiyā. The whole of this tract is a fertile stretch of country, which owes much to the extension of canal-irrigation.

Geology.

The soil is entirely alluvium in which kankar is the only stone found, while the surface occasionally bears saline efflor-

Bolany.

The flora of the District presents no peculiarities. At one time thick jungle covered with dhak (Buten frondera) was common; but the country was denuded of wood for fuel when the East Indian Railway was first opened, and trees have not been replanted. The commonest and most useful trees are the babūl and kīkar (Acacia arabica and A. churnia). The shīsham (Dalbergia Sisson), nim (Melia Azadirachta), and pipal (Ficus religiosa) are also common. In the east the landlords have encouraged the plantation of fine mango groves.

Fauna.

Wild hog and hog deer are common in the khādar. Both antelope and nilgai are found in the uplands, but are decreasing owing to the spread of cultivation. The leopard, wolf, and hyena are occasionally mer with. In the cold season duck and snipe collect in large numbers on the ponds and marshes. Fish are not much consumed in the District, though plentiful in the rivers.

Climate and temperature. The climate resembles that of MERRIT DISTRICT, but no meteorological observations are made here, except a record of rainfall. The extension of canal-irrigation has increased malaria, but its effects have been mitigated by the improvement of the dramage system.

Rainfall.

The annual rainfall averages about 26 inches, of which 24 inches are usually measured between June r and the end of October. Large variations occur in different years, the fall varying from under 15 inches to over 40 inches. There is not much difference between the amounts in different parts of the District, but the eastern half receives slightly more than the western.

History.

The early traditions of the people assert that the modern

District of Bulandshalir formed a portion of the Pandava kingdom of Hastinapur, and that after that city had been cut away by the Ganges the tract was administered by a governor who resided at the ancient town of Anar. Whatever credence may be placed in these myths, we know from the evidence of an inscription that the District was inhabited by Gaur Brahmans and ruled over by the Gupta dynasty in the fifth century of our era. Few glimpses of light have been cast upon the norals of this region before the advent of the Muhammadans, with whose approach detailed history begins for the whole of Northern India. In 1018, when Mahmud of Ghazni arrived at Baran (as the town of Bulandshahr is sometimes called to the present day), he found it in possession of a native prince named Har Dat. The presence of so doughty an apostle as Mahmud naturally affected the Hindu ruler; and accordingly the Raja himself and ro,000 followers came forth, says the Musalmila historian, and proclaimed their anxiety for conversion and their rejection of idols.' This timely repentance saved their lives and property for the time; but Mahmud's raid was the occasion for a great immigration towards the Doub of fresh tribes who still hold a place in the District. In 1193 Kuth-ud-din appeared before Baran, which was for some time strenuously defended by the Dor Rājā, Chandra, Sen; but through the treachery of his kinsman, Jaipal, it was nt last captured by the Musalmans. The traitorous Hindu accepted the faith of Islam and the Chaudhriship of Baran. where his descendants still reside, and own some small landed property. The fourteenth century is marked as an epoch when many of the present tribes inhabiting Bulandshahr first gained a footing in the region. Numerous Rajput adventurers poured into the defenceless country and expelled the Meos from their lands and villages. This was also the period of the early Mongol invasions; so that the condition of the Doab was one of extreme wretchedness, caused by the combined rayages of pestilence, war, and famine, with the usual concomitant of internal anarchy. The firm establishment of the Mughal dynasty gave a long respite of tranquillity and comparatively settled government to these harassed provinces. They shared in the administrative reconstruction of Akbar; their annals are devoid of incident during the flourishing reigns of his great successors. Here, as in so many other Districts, the proselytizing zenl of Aurungzeh has lest permanent essects in the large number of Musalman converts; but Bulandshahr was too near the court to afford much opportunity for those rebellions and

toyal conquests which make up the object elements of Mughal history. During the disastrous decline of the imperial power. which dues from the accession of Bahadur Shah in 1707, the country round Baran was a prey to the same misfortunes which overtook all the more fertile provinces of the empire. The Güiars and Täts, always to the front upon every occasion of disturbance, exhibited their usual turbulent spirit; and many of their chieftains carved out principalities from the villages of their neighbours. But as Baran was at this time a dependency of Koil, it has no proper history of its own during the eighteenth century, apart from that of Aliganit District. Under the Maratha rule it continued to be administered from Koil; and when that town with the adjoining fort of Aligarh was captured by the British in 1803, Bulandshahr and the surrounding country were incorporated in the newly formed District.

The Mutiny of 1857 was ushered in at Bulandshahr by the revolt of the 9th Native Infantry, which took place on May 21, shortly after the outbreak at Aligarh. The officers were compelled to fly to Meerut, and Bulandshahr was plundered by a band of rebellious Gujars. Its recovery was a matter of great importance, as it lies on the main road from Agra and Aligarh to Meerut. Accordingly, a small body of volunteers was dispatched from Medrut for the purpose of retaking the town, which they were enabled to do by the aid of the Dehra Gurkhas. Shortly afterwards, however, the Curkhas marched off to join General Wilson's column, and the Güjars once more rose. Walidad Khan of Malagarh put himself at the head of the movement, which proved strong enough to drive the small European garrison out of the District. From the beginning of July till the end of September Walldad held Bulandshahr without opposition, and commanded the whole line of communication with Agra. Meantime internal fends went on as briskly as in other revolted Districts, the old proprietors often ousting by force the possessors of their former estates. But on September 25 Colonel Greathed's flying column set out from Ghāziābād for Bulandshahr, whence Waltdad was expelled after a sharp engagement and forced to fly across the Ganges. On October 4 the District was regularly occupied by Colonel Farqubar, and order was rapidly restored. The police were at once reorganized, while measures of repression were adopted against the refractory Gujars, many of whom still continued under arms. It was necessary to march against rebels in Etah early in 1858; but the tranquillity

of Bulandshahr itself was not again disturbed. Throughout the progress of the Mutiny, the Jats almost all took the side of Government, while the Gujars and Musalman Rajputs proved our most irreconcilable enemies.

Two important copperplate inscriptions have been found Archaeoin the District, one dated A.D. 465-6 of Skanda Gupta, and logy. another giving the lineage of the Dor Rajas. There are also ancient remains at Ahar and Bulandshahr. A dargah was built at Bulandshahr in 1193, when the last Dor Raja was defeated by the Muhammadans; and the town contains other buildings of the Muhammadan period.

The number of towns and villages in the District is 1,532. The Population has increased considerably. The numbers at the people. four enumerations were as follows: (1872) 937.427, (1881) 924.822, (1891) 949,914, and (1901) 1.138,701. The temporary decline between 1872 and 1881 was due to the terrible outbreak of fever in 1879, which decimated the people. increase of nearly 20 per cent. during the last decade was exceeded in only one District in the Provinces. There are four tabilis-Andpshahr, Bulandshahr, Sikandarabad, and KHURIA—the head-quarters of each being at a town of the same name. These four towns are also municipalities, and the last three are the chief places in the District.

The principal statistics in 1901 are given below:-

Tubsil,	Ares in upuste with which	Towns. Z	Amages	Population	Population per equate mile.	Percentage of variation in population ise tween 1891 and 1901.	Number of persons able to read and write.
Anüpshahr Bulendshahr Sikandarāhād Khurja	4-11 477 516 462	\$ 5 7 27	378 379 404 348	278,152 332,262 260,849 266,838	626 696 505 577	+ 22.0 + 17.8 + 16.2 + 20.7	6,325 9,612 5,046 7,176
District total	t,Rgg	23	1,509	1,138,101	599	+ 19.8	28,159

In 1901 Hindus numbered 900,169, or 79 per cent. of the total: Musalmans, 217,209, or 19 per cent.; Aryas, 12,298; and Christians, 4,528. The number of Aryas is greater than in any other District in the Provinces, and the Samaj has twentyseven lodges or branches in this District. Practically all the inhabitants speak Western Hinds. In the north the dialect is Hindustani, while in the south Braj is commonly used.

Among Hindus the most numerous castes are Chamars Castes and (leather-workers and lubourers), 183,000, who form one-fifth of tions.

the total; Brahmans, 113,000; Rajputs, 93,000; Jats, 69,000; Lodhas (cultivators), 64,000; Banias, 56,000; and Gujars, 44,000. The Brähmans chiefly belong to the Gaur clan, which is peculiar to the west of the Provinces and the Puniah, while Jats and Gujars also are chiefly found in the same area. The Lodhas, on the other hand, inhabit the central Districts of the Provinces. The Meos or Minas and Mewaits are immigrants from Mewat; and among other castes peculiar to this and a few other Districts may be mentioned the Orhs (weavers). 4.000, and Aherias (hunters), 4.000. The Musalmans of nominally foreign extraction are less numerous than those descended from Hindu converts, Shaikhs number 24,000; Pathāns, 17,000; Saivids, 6,000; and Mughals only 3,000; while Musalman Rajputs number 34,000; Barhais (corpenters), 15,000; Telis (oil-pressers), 11,000; and Lohais (blacksmiths). 11,000. About 51 per cent, of the population are supported by agriculture. Rājputs, both Musalmān and Hindu, lats, Salyids, and Banias are the largest landholders; and Rajputs, Brāhmans, and Jāts the principal cultivators. General labour supports it per cent, of the total population, personal service 9 per cent., weaving 3 per cent., and grain-dealing 3 per cent.

Christian

Of the 4,480 native Christians in 1901, 4,257 belonged to the American Methodist Episcopal Church, which started work here in 1887. Most of them are recent converts, chiefly from the lower castes. The Zanāna Bible and Medical Mission and the Church Missionary Society have a few stations in the District.

General agricultural conditions. Excluding the Jumna and Ganges khādars, the chief agricultural defect is the presence of barren ūsar land covered with saline efflorescences called rch, which occurs in badly-drained localities, and spreads in wet years. The District is remarkable for the absence of grazing-grounds, fodder-crops being largely grown. Where conditions are so uniform, the chief variations are due to the methods employed by different castes, among whom Ahīrs and Jāis take the first place. The Ahīrs devote most attention to the area near the village site and prefer well-irrigation, while the Jāts do equal justice to all good land and use canal water judiciously. The Lodhas come next and are as industrious as the Jāts, but lack their physique. Gūjars are usually inferior.

Chief ngricula tural statistles The tenures are those common to the United Provinces; but the District is marked by the number of large estates. Out of 3,440 mahals at the last settlement, 2,446 were caminaari.

or joint zamindari, 546 blaigachara, und 448 pattidari or and muclimperfect fattidari. The main statistics of cultivation in polonya. rgog-4 are shown below, in square miles:-

Taknt.			Total	California	Inigotal	Cultivable	
Antip;hahr	•	4	414	339	reg	3.8	
liulandehahe	•	-	477	376	791	46	
Silandarábliá			516	845	120	63	
Khutja .	•	•	460	315	15.2	73	
	Tu	tal	1,899	1,418	651	146	

The chief food-crops and the area occupied by early in square miles were: wheat (424), gram (199), maire (188), barley (227), jouair (156), and Alfra (121). The area under maize has trebled during the last twenty-five years. Bajra is chiefly grown on inferior soil in the Sikandarabad and Khurja tahsils. The other important crops are cotton (103) and sugar-cane (63), both of which are rapidly increasing in importance. On the other hand, the area under indigo has declined from 120 square miles in 1885 to 25 in 1903-4.

From 1870 to 1874 a model farm was maintained at Improve-Bulandshahr, and attempts were made to introduce Egyptian menu in cotton; but these were not successful. The chief improve-tural ments effected have been the extension of canal-irrigation, and practice. its correction by means of drainage cuts. Much has also been done to straighten and deepen the channels of the rivers described above, especially the East Kall Nadl. These have led to the extended cultivation of the more valuable staples. Very few advances have been made under the Agriculturists' Loans Act, and between 1891 and 1900 only Rs. 30,000 was given under the Land Improvement Loans Act. In 1903-4 the loans were Rs. 1,700. The agricultural show held annually at Bulandshahr has done much to stimulate interest in small improvements.

An attempt was made in 1865 to improve the cattle by Coule. importing bulls from Haritma; but the camendars were not hime, and favourable. The ordinary cattle are poor, and the best animals are imported from Rajputana, Mewar, or Bijner. Horsebreeding has, however, become an important pursuit, and there are twenty stallings owned by Government in this District. The zamindars of all classes are anxious to obtain their services, and strong handsome coles and fillies are to be seen in many parts. Mules are also lived, and ten donker stallions

have been supplied. Since 1903 horse and mule-breeding operations have been controlled by the Army Remount department. Sheep and goats are kept in large numbers, but are of the ordinary interior type.

Irrigation.

The District is exceptionally well provided with means of irrigation. The main channel of the Upper Ganges Candl passes through the centre from north to south. Near the eastern border irrigation is supplied by the Anūpshahr branch of the same canal, while the western half is watered by the Māt branch. The Lower Ganges Canal has its head-works in this District, leaving the right bank of the Ganges at the village of Naraura. Most of the wells in use are masonry, and water is raised almost universally in leathern buckets worked by bullocks. In 1903-4 canals irrigated 323 square miles and wells 310. Other sources are insignificant.

Minerals.

Salt was formerly manufactured largely in the Jumna khādar, but none is made now. The extraction of sodium sulphate has also been forbidden. There are sixty factories where crude saltpetre is produced, and one refinery. Where kankar occurs in compact masses, it is quarried in blocks and used for building purposes.

Arts and manufactures.

Till recently Bulandshahr was one of the most important indigo-producing Districts in the United Provinces. There were more than 120 factories in 1801; but the trade has fallen off considerably, and in 1902 there were only 47, which employed about 3,800 hands. Cotton is ginned and pressed at 12 factories, which employ more than 900' hands; and this industry is increasing. The owners of the factories have imported the latest machinery from England. Other manufactures are not of great importance; but the calico-printing of Jahangiraban, the muslims of Sikandar-ARAD, the pottery of Khurja, the rugs of Jewan, and the wood-carving of Bulandshahr and Shirarpur deserve mention for their artistic merits. There is also a flourishing glass industry in the Bulandshahr taksil, where bangles and small phials and bottles are largely made. Country cloth is .. woven as a band industry in many places.

Commerce,

Grain and cotton form the principal exports; the weight of cleaned cotton exported is nearly 4,000 tons, having doubled in the last twenty-five years. The imports include piece-goods, metals, and salt. Anapshahr is a dépôt for the import of timber and bamboos raited down the Ganges; but Khurja and Dibai have become the largest commercial centres, owing to their proximity to the railway. Local trade is carried

on at numerous small towns, where markets are held once or twice a week.

The East Indian Railway runs from south to north through Railways the western half of the District. For strategic reasons it was built on the shortest possible alignment, and thus passes some distance from the principal towns; but a branch line is under construction, which will connect Khurja and Bulandshahr and join the Oudh and Rohikhand Railway at Hāpun in Meerut District. A branch of the Oudh and Rohikhand Railway from Aligarh to Morādābād and Bareilly crosses the south-east corner.

There are 163 miles of metalled roads and 495 miles of unmetalled roads. The whole length of metalled roads is in charge of the Public Works department, but the cost of 109 miles of these, and the whole cost of the unmetalled roads, is met from Local funds. Avenues of trees are maintained on 257 miles. The principal line is that of the grand trunk road from Calcutta to Delhi, branches of which leave Bulandshahr for Meerut and Anupshahr. The only parts where communications are defective are the northern Jumna khādar and the north-eastern and south-eastern corners of the District.

Bulandshahr shared in the many famines which devastated Famine. the Upper Doab before British rule, and during the early years of the nineteenth century scarcity occurred several times. In 1837 famine was severe, and its effects were increased by immigration from Hariana and Marwar, and the Districts of Etawah and Mainpurl. The worst-affected tracts were the areas along the Junua; but the construction of the grand trunk road provided employment for many, and other works were opened. In 1860 the same tracts suffered, being largely inhabited by Gajars, still impoverished owing to their lawlessness in the Mutiny. The Mat branch canal was started as a relief work. About Rs. 32,000 was spent on relief and Rs. 50,000 advanced for purchase of bullocks and seed, much of which was repaid later, and spent in constructing dispensaries. In 1868-9, though the rains failed, there was n large stock of grain, and the spread of irrigation enabled spring crops to be sown. In 1877 and 1896-7 no distress was felt except among immigrants, and able-bodied labourers could always find work. In the latter period alone 1,518 wells were made, and the high prices of grain were a source of profit,

The ordinary staff consists of a Collector, assisted by one District

subdivisions and staff, member of the Indian Civil Service and three Deputy-Collectors recruited in India. There is a tahsildar at the head-quarters of each of the four tahsils. Bulandshahr is also the head-quarters of an Executive Engineer of the Upper Ganges Canal.

Civil justice and crime.

For purposes of civil jurisdiction the District is divided between two Judgeships. The Sikandarābād tahsīl belongs to the munsifi of Ghāziābād in Meerut District, and appellate work is disposed of by the Judge of Meerut. The rest of the District is divided into two munsifis, with head-quarters at Bulandshahr and Khurja, subordinate to the Judge of Aligarh. The additional Sessions Judge of Aligarh exercises criminal jurisdiction over Bulandshahr. The District has a bad reputation for crime, cattle-theft being especially common. Murders, robberies, and dacoities are also numerous. The Gūjars are largely responsible for this lawlessness, being notorious for cattle-lifting.

Land revenue administration.

Part of the District was acquired by cession from the Nawāb Wazīr of Oudh in 1801, and part was conquered from the Marathas in 1803. For twenty years the area now included lay partly in Allgarh, and partly in Meerut-or South Sahāranpur Districts. In 1819, owing to the lawlessness of the Gujars, a Joint Magistrate was stationed at Bulandshair, and in 1823 a separate District was formed. The early land revenue settlements were of a summary nature, each lasting one, three, four, or five years. Talukdars, who were found in possession of large tracts, were gradually set aside. Operations under Regulation VII of 1822 were completed in only about 600 villages, and the first regular settlement was made between 1834 and 1837. The next settlement was commenced before the Mutiny, and was completed in 1865; but the project for a permanent settlement entailed a complete revision. This showed that there had been an extraordinary rise in rental 'assets,' which was partly due to survey errors, partly to concealments at the time of settlement, and partly to an increase in the rental value of land. The idea of permanently fixing the revenue was abandoned, and the demand originally proposed was sanctioned, with a few alterations, yielding 12-4 lakhs. The 'assets,' of which the revenue formed half, were calculated by fixing standard rent rates for different classes of soil. These rates were derived partly from average rents and partly from valuations of produce. The latest revision of settlement was completed between 1886 and 1880, and was notorious for its results. The assessment was to be made on the actual rental 'assets'; but the records were found to be unreliable on account of the dishonesty of many landlords, who had deliberately falsified the patwaris' papers, thrown land out of cultivation, and stopped irrigation. The tenants, who had been treated harshly and not allowed to acquire occupancy rights, themselves came forward to expose the fraud. Large numbers of rent-rolls were entirely rejected, and the villages they related to were valued at circle rates. The circle rates were obtained by an analysis of rents believed to be genuine. While the settlement of most of the District was confirmed for thirty years, a number of villages were settled for shorter terms to enable the settlement to be made on the basis of a fair area of cultivation. The total demand was fixed at 19.8 lakhs, which has since risen to 20 lakhs. The incidence per acre is Rs. 1-15-0, varying in different parts of the District from Rs. 1-2-0 to Rs. 2-0-0.

Collections on account of land revenue and total revenue have been, in thousands of rupees:-

	1850-1.	1200-1.	1900-1-	1903-4-
Land revenue , Total revenue .	13,31	54'22	19,81	19,85
	13,81	1840	27,99	28,02

There are four municipalities—BULANDSHAHR, ANDPSHAHR, Local self-SIKANDARĀBĀD, and KHURJA—and 19 towns are administered governunder Act XX of 1856. Outside these, local affairs are nunaged by the District board. In 1903-4 the income of the latter was 1-9 lakhs, chiefly derived from local rates. The expenditure was 2 lakhs, of which Rs. 96,000 was spent on roads and buildings.

In 1903 the District Superintendent of police was assisted Police and by four inspectors. The force numbered 106 officers and jails. 355 constables, besides 369 municipal and town police, and 1,979 village and road police. The District jail contained an average of 232 prisoners in the same year.

The District is backward in literacy, and only 2.5 per cent Education. (4.5 males and 0.3 females) of the population could read and write in 1901. In 1881 there were 130 public schools with 4,486 pupils, and the numbers rose in 1901 to 171 schools with 7,989 pupils. In 1903-4 there were 187 public schools with 10,301 pupils, of whom 57 were girls, and also 271 private schools with 4,157 pupils. The total expenditure on education was Rs. 49,000, of which Local and municipal funds supplied Rs. 38,000, and fees Rs. 11,000.

the public schools, two were managed by Government and 117 by the District and municipal boards.

Hospitals and illispensaries. The District has nine hospitals and dispensaries, with accommodation for 109 in-patients. In 1903 the number of cases treated was 101,000, of whom 2,300 were in-patients, and 8,400 operations were performed. The expenditure in the same year was Rs. 18,000, chiefly from Local funds.

Vaccina-

In 1903-4, 39,000 persons were successfully vaccinated, representing a proportion of 34 per 1,000 of population. Vaccination is compulsory only in the municipalities.

[F. S. Growse, Bulandshahr (Benares, 1884); T. Stoker, Settlement Report (1891); H. R. Nevill, District Gazetteer (1903).]

Anupshahr Tahsil.—Eastern taksil of Bulandshahr District, United Provinces, comprising the parganas of Antipshahr, Ahar, and Dibai, and lying along the Ganges, between 28° 5' and 28° 37' N. and 77° 58' and 78° 28' E., with an area of 444 square miles. The population rose from 222,481 in 1891 to 278,152 in 1901. There are 378 villages and four towns, the largest of which are JAHANGIRABAD (population, 11,572), DIBAI (10,579), and Anurshahr (8,601), the taksil head-quarters. The demand for land revenue in 1903-4 was Rs. 4,99,000, and for cesses Rs. 80,000. The tabsti is divided into two parts, from north to south, by the Chhoiya river, The land to the east is naturally inferior to that on the west of the river, but has been immensely improved by irrigation from the Anapshahr branch of the Upper Ganges Canal. The channel of the Chhoiva was very badly defined, but has been straightened and deepened by the Irrigation department. 1903-4 the area under cultivation was 339 square miles, of which 158 were irrigated, wells supplying more than half.

Bulandshahr Tahsil.—Central tahsil of Bulandshahr District, United Provinces, comprising the parganas of Baran, Agautā, Siyānā, and Shikārpur, and lying between 28° 14' and 28° 43' N. and 77° 43' and 78° 13' E., with an area of 477 square miles. The population rose from 281,928 in 1891 to 332,262 in 1901. There are 379 villages and five towns, the largest of which are Bulandshahr (population, 18,959), the District and tahsil head-quarters, Shikārpur (12,249), Siyārā (7,615), Gulaothī (7,208), and Aurangābād (5,916). The demand for land revenue in 1903-4 was Rs. 5,65,000, and for cesses Rs. 94,000. This is the richest tahsil in the District, and the density of population, 696 persons per square mile, is considerably above the District average (590). The East

Kalt Nadi flows from north to south through the western portion of the tahsil, and formerly caused much damage by flooding in wet years. It has been straightened and deepened, and is no longer used as a canal escape, with very beneficial results. The northern parguna of Aganta is the most fertile. There are marshy tracts in the north-east of the tahsil, and sandy areas in the south-east. Irrigation is supplied by the Upper Ganges Canal east of the Kall Nadi. In 1903-4 the area under cultivation was 376 square miles, of which 191 were irrigated. Well-irrigation supplies two-thirds of this area, and is more important here than in the other tahsils of the District.

Sikandarābād Tahsīl.—North-western talisīl of Bulandshahr District, United Provinces, comprising the parganas of Sikandarabad, Dadri, and Dankour, and lying along the Jumna, between 28° 15' and 28° 39' N. and 77° 18' and 77° 50' E., with an area of 516 square miles. The population rose from 224,368 in 1891 to 260,849 in 1901. There are 404 villages and seven towns, the largest of which are SIKANDARĀBĀD (population, 18,200), the taket head-quarters, and DANKAUR (5,444). The demand for land revenue in 1903-4 was Rs. 4,32,000, and for cesses Rs. 74.000. The tahsil is the poorest in the District, and supports only 505 persons per square mile, against an average of 500. It is crossed from north to south by two main lines of drainage—the Patwai and the Karon or Karwan. Both of these are naturally ill-defined, but their channels have been deepened and straightened. The area between the Patwai and Junina is poor, being largely covered with tamarisk and grass jungle varied by patches of salt waste. In the north the HINDAN and Bhuriya rivers increase the saturation, though they bring down fertile deposits of earth. The talist is well supplied with irrigation by the Mat branch of the Upper Ganges Canal, which passes through the centre from north to south. In 1903-4 the area under cultivation was 358 square miles, of which 150 were irrigated. More than twothirds of the irrigated area is supplied from the canal.

Khurja Tahsil.—Southern tahsil of Bulandshahr District, United Provinces, comprising the parganas of Jewar, Khurja, and Pahäsū, and lying between 28° 4' and 28° 20' N. and 77° 29' and 78° 12' E., with an area of 462 square miles. The population rose from 221,137 in 1891 to 266,838 in 1901. There are 348 villages and seven towns, the largest of which are Khurja (population, 29,277), the tahsil head-quarters, Jewar (7,718), Pahäsū (5,603), Chhatārī (5,574), and Rabūpura (5,048). The demand for land revenue in 1903–4 was Rs. 5,05,000,

and for cesses Rs. 82,000. The talisti is drained by the East Kālī Nadī, the Karon or Karwan, and the Patwai or Patwāhā Bahū, all which have been deepened and straightened to improve the drainage. The Jumna flows along the western border. East of the Kālī Nadī and west of the Patwai are tracts of light sandy soil; but the central portion is highly fertile, and is well supplied by irrigation from the Upper Ganges Canal and the Māt branch of the same work. Cotton is more largely grown in this tract than in any other part of the District. In 1903-4 the area under cultivation was 345 square miles, of which 152 were irrigated. Well-irrigation supplies about one-third of the total, and is chiefly important in the area between the canals.

Ahār.—Town in the Anunshahr tahsil of Bulandshahr District, United Provinces, situated in 28° 28' N. and 78° 15' E., 21 miles east of Bulandshahr town. Population (1901), 2,382. It is said to derive its name from alli, 'snake,' and har, 'sacrifice,' as tradition relates that Janamejaya performed his great snake sacrifice here. The capital of the Lunar race is also said to have been moved here after Hastinapur was washed away. Another legend states that this was the residence of Rukmini, wife of Krishna, and the temple from which she was carried off is still pointed out. The place is certainly of great antiquity, and several fragments of stone sculpture of an early date have been found. Under Akbar, Ahār was the chief town of a mahāl or pargana. The town lies on the high bank of the Ganges, and there are many temples. It also contains a hall for the meetings of the Arya Samāj, which has over 100 followers here.

Anupshahr Town.—Head-quarters of the taksil of the same name, in Bulandshahr District, United Provinces, situated in 28° 21' N. and 78° 16' E., 25 miles east of Bulandshahr town on a metalled road. Population (1901), 8,601. was founded in the reign of Jahangir by the Bargujar Raja Anup Rai, from whom it derives its name, and was of great importance in the eighteenth century as commanding an important crossing of the Ganges on the road from Delhi to In 1757 Ahmad Shah Durrani established Rohilkhand. cantonments here for a time, and returned to them in 1759. It was from this place that the coalition was organized which led to the overthrow of the Marathas at Panipat in 1761. In 1773 the combined forces of the Oudh Wazīr and the British made Anupshahr their rendezvous when opposing the Maratha invasion of Rohilkhand; and from that date

till 1806 Anaushahr was garrisoned by British troops, afterwards removed to Meerut. During the Muliny the Jats successfully defended the crossing of the river by the rehels from Robilkhand. The town stands on the high bank of the Ganges and is well drained. There is a fine bazar, and besides the totalli a dispensary is maintained. The Zanana Bible and Medical Mission and the Charch Missionary Society have branches here. Antipshahr has been a municipality since 1866. During the ten years ending 1901 the income and expenditure averaged Rs. 9,000. In 1903-4 the income was Rs. 11,000, chiefly derived from octroi (Rs. 6,000), and the expenditure was Rs. 15,000. The town was formerly the northern limit of traffic on the Ganges, and a factory of the East India Company was maintained here for some time; but the construction of the Naraura weir in 1878 cut it off from the lower reaches of the river, and at present it is merely a depot for timber and hamboos. The through trade across the river has also been diverted by milways, and at present sugar is the chief article of commerce. There is a small manufacture of cloth, blankets, and shoes for the local demand. The tabili school contains 160 pupils, and there is also a Mission Angla-remacular school.

Aurangābād Saiyid.—Town in Bulaudshahr District, United Provinces, situated in 28° 22' N. and 78° 5' E., 9 miles north-east of Bulandshahr town. Population (1901), 5.916. It was founded in 1704 by Saiyid Abdul Azīz, who undertook, with the permission of the emperor Aurangzeb, to eject the turbulent Jaroliyās of the neighbourhood. His descendants still own the town. The site is low and surrounded by water during the rains. Aurangābād is administered under Act XX of 1856, with an income of Rs. 2,000. Trude is entirely local. There is a primary school with so pupils.

Bulandshabr Town.—Head-quarters of the District and labil of the same name, United Provinces, situated in 28-15 N. and 77 52 E., on the grand trunk road, to miles eact of the Chola station on the East Indian Railway. l'opalation (1901), 18,950, of whom 9,139 are Hindus and 9,071 Musalmans. The old name of the town was Baran, and it received the nickname Unchanagar or Bulandshahr ("high town") from its elevated position on a bank near the Küll Nadi. It is a place of considerable antiquity, and is said to have been faunded by a Tomar chief of Ahâr named Parmil, or according to another account by a man named Ahibaran, from whom

its name was derived. Buddhist remains of the fifth to seventh centuries have been found here, besides coins of much older date. In the eleventh century the town was the head-quarters of Har Dat, a Dor chieftain who ruled in this part of the Doah, with territory extending as far as Hapur and Meerut. In 1018 Mahmud of Ghazni crossed the Junua and reached Baran. In the words of the Persian historian, Har Dat 'reflected that his safety would be best secured by conforming to the religion of Islam, since God's sword was drawn from the scabbard and the whip of punishment was uplifted. He came forth, therefore, with 10,000 men, who all proclaimed their anxiety for conversion and their rejection of idols.' The town was given back to Har Dat, but from a copperplate inscription the Dors appear to have been superseded for a time. They were restored; and Chandra Sen, the last Hindu ruler, died while gallantly defending his fort against Kutb-ud-din, the general of Muhammad Ghori, in 1193. The town is chiefly famous in later times as having been the birthplace of the historian, Ziā-addin Barni, who flourished in the first half of the fourteenth century. There are a few tombs and mosques of the Muhammadan period, but none of importance. At the commencement of British rule. Bulandshahr was a small town. A few good houses stood on the elevation now known as the Balae Kot, and Chamars and Lodhas lived in huts at the base. The establishment of the District head-quarters here caused arapid growth; and the town has been much improved by the energy and taste of its inhabitants, encouraged by several Collectors, especially the late Mr. F. S. Growse. The Chauk or central market has been provided with a brick terrace and is adorned with carved stone, while the houses and shops ... surrounding it are elegant specimens of domestic architecture. The rich landlords of the District have also erected several fine houses and gateways and a town hall, all of which are remarkable for the excellence of the stonework which they contain. Close to the courts is a handsome building called the Lowe Memorial, in memory of a former Collector, which is used as a shelter for people attending the courts. A line bathing ghat has been made on the banks of the river at the eastern entrance of the town. A dispensary and a female hospital were built in 1895. Besides the ordinary District staff, an Executive Engineer of the Ganges Canal has his head-quarters here. There are also stations of the American Methodist, Church Missionary Society, and Zanana Bible and Medical Missions.

Bulandshahr has been a municipality since 1865. During the ten years ending 1901 the income and expenditure averaged Rs. 18,000. In 1903-4 the income was Rs. 21,000, chiefly derived from octrol (Rs. 18,000), and the expenditure was R4. 24,000. Wood-carving of some artistic merit is turned out. The distance from the railway has hitherto prevented the growth of trade, which is of a local nature. A line is, however, now under construction. A high school contains more than 200 pupils and a takitat school 230, while four primary schools have 220 more.

Chhatari.—Town in the Khurja tahai of Bulandshahr District, United Provinces, situated in 28° 6' N. and 78° 9' E., 30 miles south of Bulandshahr town. Population (1901), 5,574. The town takes its name from the Chhataidhar clan of Mewalis who founded it. It belongs to the estate of the same name founded by Mahmad Ali Khān, a brother of Murād Ali Khān of Panāsū. The estate is at present under the Court of Wards, as the owner, Ahmad Saiyid Khān, is a minor. Chhatāri is administered under Act XX of 1856, with an income of about Rs. 800. There is a primary school with about 120 pupils.

Dankaur.—Town in the Sikandarābād tahsil of Bulandshahr District, United Provinces, situated in 28° 21' N. and 77° 33' E., 20 miles west of Bulandshahr town. Population (1901), 5,444. It is said to have been founded by Drona, the hero of the Mahābhārata, who taught the Pāndavas the use of arms. A masonry tank and ancient temple are still known as Dronācharj. The town lies on the edge of the high bank above the Junna, and the upper portion is gradually being deserted for the lower, on the ground that it is unlucky. Dankaur is administered under Act XX of 1856, with an income of about Rs. 1,300. It has a thriving trade in ght, sugar, and grain. A primary school is attended by 80 pupils.

Dibal.—Town in the Anapshahr tahsil of Bulandshahr District, United Provinces, situated in 25° 12' N. and 75° 16' E., close to the metalled road from Aligarh to Moradahad and a branch of the Oudh and Rohilkhand Railway. Population (1901), 10,579, which is increasing rapidly. The town is said to have been called Dhundhgath in the eleventh century, when it belonged to Dhakra Raiputs, who were expelled by Saiyid Salar Masud. A new town was built, called Dhundai, and later Dibai. In the time of Akhar it was the head-quarters of a fargana in the surkār of Koil. The basar is composed of brick-built houses, and the town is fairly well drained by

the Chhoiyā river, which flows round three sides. Dibai is administered under Act XX of 1856, with an income of about Rs. 5,000. It is a prosperous town, with three cotton gins, a cotton press, and an oil press, employing nearly 500 persons. There are large exports of coarse cloth, cotton, ghi, and grain. It contains a flourishing Anglo-vernacular school with 75 pupils, partly supported by market fees and partly by private subscriptions, and a middle school with 150 pupils.

Gulaothi.—Town in the District and tahsil of Bulandshahr, United Provinces, situated in 28° 35' N. and 77° 48' E., 12 miles north of Bulandshahr town on the Meerut road. Population (1901), 7,208. The town is said to have been founded by Mewātīs or by Gahlot Rājputs. It is chiefly inhabited by Saiyids and Baniās. A prominent Saiyid, named Mihrbān All, who died a few years ago, did much to improve the town and its approaches. He built several houses, metalled the road to the Kālī Nadī, and built a bridge across it at a cost of Rs. 30,000, and also constructed a large mosque and established a school for teaching Arabic and Persian. The American Methodist Mission has a branch here. Gulaothī is administered under Act XX of 1856, with an income of about Rs. 1,800. It has a considerable local trade and is thriving. There is a middle school with about 200 pupils.

Jahāngīrābād.—Town in the Anūpshahr tahsil of Bulandshahr District, United Provinces, situated in 28° 24' N. and 78° 6' E., 15 miles by metalled road from Bulandshahr town. Population (1901), 11,572. The town was built by Anūp Rai, founder of Anūpshahr, who named it after the emperor Jahāngīr. The place stands low, and was formerly very unhealthy, owing to the stagnant water in the neighbourhood and a ditch round the town; but this has now been drained. Act XX of 1856 is in force, and the annual income is about Rs. 3,300. There is an important market, which is the centre of a flourishing grain trade. The principal manufacture is calico-printing, excellent counterpanes, curhains, and cloths being turned out. The middle school is attended by over 250 pupils, 40 of whom reside in a boarding-house, and there is a small aided primary school with 38 pupils.

Jewar.—Town in the Khurja taksit of Bulsandshahr District, United Provinces, situated in 28° 7′ N. and 77° 34′ E., 20 miles west of Khurja. Population (1901), 7,718. In the eleventh century Jādon Rājputs, invited from Bharatpur by the Brāhmans of Jewar, settled in the town and expelled the Meos. The well-known Begam Sumrū held Jewar till her

death in 1836, when it lapsed to Government. The town lies among the ravines and broken ground on the edge of the high land above the Jumua, and is well drained. The market was rebuilt in 1881, and is now lined with good brick-built shops. Jewar is administered under Act XX of 1856, with an income of about Ra 2,000. There is a small manufacture of cotton rugs and carpets, and a weekly market is held. The town contains a prosperous agricultural bank, a middle school with 120 pupils, and a small primary school for girls, besides a branch of the American Methodist Mission.

Khurja Town.-Head-quarters of the takal of the same name in Bulandshahr District, United Provinces, situated in 28° 15' N. and 77° 51' E., near the grand trunk road, and a miles from Khuria station on the East Indian Railway. Population (1901), 19,277, of whom 15,878 are Hindus and 12,023 Musalmans. The town is said to derive its name from khārija ('revenue free'), as it was built by the Dhale Sultan Rajputs on a revenue-free grant made by Firoz Shah Tughlak. The descendants of the original grantees retained possession of their holdings till they were resumed partly by Saraj Mal, Raji of Bharatpur, in 1740, and partly by Daulat Rao Sindhia towards the close of the eighteenth century. There is only one ancient building, the tomb of Makhdam Sahib, near the grand trunk road, which is about 400 years The chief public buildings are the tahalli, dispensare, and town hall. The principal inhabitants are Kheshel Pathans and Churawal Banias; the latter, who are Jain by religion, are an enterprising and wealthy class, carrying on banking all over India and taking a leading share in the trade of the place. Thirty years ago they built a magnificent domed temple, which cost more than a lakh and is adorned with a profusion of stone carving of fine execution. The interior is a blaze of gold and colour, the vault of the dome being painted and decorated in the most florid style of indigenous art. The market-place, bazar, and dharmella are all adorned by handsome gateways of carved stone, and ove much to the munificance of the Jain traders. There are branches of the American Methodist and Zanlina Bible and Medical Missions.

Khurja has been a municipality since 1866. The receipts and expenditure during the ten years ending mor averaged Rs. 27.500. In 1903-4 the income was Rs. 38,000, chiefly derived from octroi (Rs. 28,000), and the expenditure was Rs. 42,000. The town is the chief commercial centre of the

District, and contains seven cotton gins and presses, which employed 444 hands in 1903. Cotton-ginning by hand is important, and there is a very large export of grain, besides a smaller trade in indigo, sugar, and ght. The pottery of Khurja resembles that made at Multian and in the Rantur State, and has some reputation. English cloth, metals, and brass utensils are the chief articles imported. There are eight schools with about 600 pupils.

Pahāsū.—Town in the Khurja tahsil of Bulandshahr District, United Provinces, situated in 28° 10' N. and 78° 5' E., 24 miles south of Bulandshahr town. Population (1901), 5,603. Partab Singh, one of the first Barguiar immigrants, made it his head-quarters. Pahāsū was the chief town in a mahāl or fargana under Akbar, and in the eighteenth century was conferred with a jagir of fifty-four villages by Shah Alam II on the Begam Sumru for the support of her troops. After her death in 1836, it was held for a time by Government and then granted in 1851 to Murad Ali Khan, a descendant of Partab Singh. His son, Nawab Faiz Alī Khan, K.C.S.I., behaved with conspicuous loyalty during the Mutiny, and was afterwards commander-in-chief and prime minister of Jaipur State. Since his death in 1894, his son, Nawab Faiyaz Ali Khan, C.S.I., has served as a member of the Imperial and Provincial Legislative Councils, and is now a minister of state in Jaipur. The town is administered under Act XX of 1856, with an income of about Rs. 900. The Nawab maintains a dispensary and an Anglo-vernacular school, and there is a primary school with os punils.

Rabūpura.—Town in the Khurja tahūl of Bulandshahr District, United Provinces, situated in 28° 15' N. and 77° 37' E., 19 miles west of Bulandshahr town. Population (1901), 5,0.48. The place was founded by a Mewätī named Rabū in the eleventh century. The Mewätīs were ousted by the Jalswār Rājputs in the time of Prithwī Rāj, late in the twelfth century. From the days of Shāh Alam II up to 1857, Rabūpura was the centre of an estate comprising twenty-four villages, which was confiscated after the Mutiny for the rebellion of the proprietors. The town contains a good brick market, and half the houses and shops are also of brick. The American Methodist Mission has a branch here, with a small church and dispensary. Rabūpura is administered under Act XX of 1856, with an income of about Rs. 1,300. There is a considerable trade in cattle. The primary school contains 60 pupils.

Shikarpur.-Town in the District and tahsil of Buland-

shahr, United Provinces, situated in 28° 17' N. and 78° 1' E., 13 miles south of Bulandshahr town. Population (1901), 12,249. The present town over its existence to Sikandar Lodi, who built a hunting-lodge here at the end of the fifteenth century, near the cite of an older town now represented by a mound called the Tulpat Nagari or Anyai Khera. North of the site is a remarkable building of red sandstone called the Bara Khamba, or 'twelve pillars,' which formed an unfinished tomb begun by Saivid Fazl-ullah, son-in-law of the emperor Farrukh Siyar, about 1718. The town contains a fine walled sarai built in the seventeenth century, and many substantial brick houses and a few handsome mosques. The American Methodists have a branch mission here. The town is administered under Act XX of 1856, with an income of about Rs. 4.500. chief manufactures are cotton cloth and shoes, and excellent wood-carving is turned out on a small scale. There are a middle school with 100 pupils, and an aided primary school with to.

Sikandarābād Town.—Head-quarters of the talsil of the same name in Bulandshahr District, United Provinces, situated in 28° 28' N. and 77° 42' E., on the grand trunk road, 4 miles from the Sikandarabad station on the East Indian Railway. Population (1901), 18,290, of whom 10,590 are Hindus and 6.814 Musalmans. The town was built by Sikandar Lodi in 1498, and was the head-quarters of a pargana or mahal under Akbar. In the eighteenth century it was held for a time by Najīb-ud-daula. Saādat Khān, Nawāb of Oudh, attacked and defeated a Matatha force here in 1736. The Jat army of Bharatpur encamped at Sikandarābād in 1763, but fled across the Jumna on the death of Sumj Mal and defeat of Jawahir Singh. Under Maratha rule the town was the head-quarters of a brigade under Perton; and after the fall of Aligarh, Colonel James Skinner held it. During the Mutiny of 1857, the neighbouring Gujars, Rājputs, and Muhammadans attacked and plundered Sikandarābād; but Colonel Greathed's column relieved the town on September 27, 1857. There are several tombs and mosques of some antiquity. Besides the tahali and police station there is a dispensary; and the American Methodists. the Church Missionary Society, and the Zanana Bible and Medical Mission have branches here. Sikandarābād bas been a municipality since 1872. During the ten years ending 1901 the income and expenditure averaged Rs. 15,000. In 1903-4 the income was Rs. 23.000, chiefly derived from actroi (Rs. 17,000), and the expenditure was Rs. 21,000. There is not much trade:

but fine cloth or muslin is manufactured and exported to Delhi, and a cotton gin has been recently opened, which employed 105 hands in 1903. The town contains a flourishing Anglovernacular school with more than 200 pupils, a taksili school with 120, and five primary schools with 240 pupils.

Siyana.—Town in the District and talist of Bulandshahr. United Provinces, situated in 28° 37' N. and 78° 4' E, 19 miles north-east of Bulandshahr town. It is being connected by a metalled road with Bulandshabr and Gailmuktesar. Population (1901), 7,615. The name is said to be a corruption of Sainban or 'the forest of rest,' because Balarama, brother of Krishna, on his way from Muttra to Hastinapur, slept here our night, and was hospitably entertained by fakirs, who had excavated a tank in the centre of a vast forest. The town gave its name to a mahal or pargana recorded in the Amer-Allari After the British conquest it was the head-quarters of a taktildar and Munsif up to 1844. It is now of small importance, but has been improved lately, and the mud huts are being replaced by brick houses. It is administered under Act XX of 1856, the income being about Rs. 1,800. There was formerly some trade in safflower, but it is declining. Indigo is still made in a small factory. A middle school with a boardinghouse is attended by about 160 pupils.

Honndaries, configuration, and river system

Aligarh District .- Southernmost District in the Meerut Division. United Provinces, lying between 27° 29' and 28° 11' N and 77° 29' and 78° 38' E., with an area of 7,946 It is bounded on the north by Bulandshahr square miles District; on the east and south by Etah; and on the west and south by Muttra The Jumna separates the north-west corner from the Puniab District of Gurgaon, and the Ganges the north-east comer from Budaun Bordering on the great rivers he stretches of low land called khadar. The Ganges khadar is fertile and produces sugar cane, while the Jumna khūdar is composed of hard unproductive clay, chiefly covered with coarse jungle grass and tamarisk. The rest of the District forms a fertile upland tract traversed by three streams most important is the Kali Nadi (East), which winds across Between the Kali Nadi and the Ganges the eastern portion lies the Nim Nadi, with an affluent known as the Chhowa the west of the District the Karon or Karwan flows through The centre is a shallow depression, the a wide valley. dramage of which gradually collects in two streams named the Schear and the Rind or Arind.

Geology. The District is composed of alluvium, but hankor or lime-

stone is found in nodules and also consolidated in masses, from which it is quarried for building purposes. Large stretches of land are covered with saline efforciscences.

The flore of Algarh presents no peruliarities. At the come Botany moncement of British rule the surface of the country was covered with large tracts of jungle, rhiefly of dhik (Rulea frondota). The jungle was rapidly out as cultivation extended, and for many years was not replaced. Between 1870 and 1900, however, the area under groves doubled, and is now about 18 square nules. The principal trees are bahul (Acara arabica), num (Melia Acadirachta), and mango. Better sorts of timber for building purposes have to be imported.

Wild hog are very numerous in the Ahādar, and are also Facusfound near the canal. Antelope are fairly common in most parts. In the cold season snipe and many kinds of duck appear on the swamps. Fish are plentiful, but are not much eaten, and there are no regular fishenes in the District.

The climate of Aligath is that of the Dohb plains generally. Climate The year is divided into the rainy season, from June till and temperature. October; the cold season, from October till April; and the hot season, from April to June.

The annual rainfall averages about 26 inches, and there is Ramfall, little variation in the District; the north-cast receives slightly more rain than the south-west. Fluctuations from year to year are more considerable. In 1894-5 the fall was 33 inches, while in 1896-7 it was only 19 inches.

The few facts in the early annals of the District that can fintery, now be recovered centre around the ancient city of Koil, of which the fort and station of Aligarh form a suburb. A popular legend informs us that Koil owes its origin to one Koshārab, a Kshattriya of the Lanar race, who called the city after his own name; and that its present designation was conferred upon it by Balarama, who slew the great demon Rol. and subdued the neighbouring regions of the Do.th. tradition assums a totally different origin to the name. The District was held by the Dor Rajport before the first Muhammadan invasion, and continued in the hands of the Raja of Baran until the close of the twelfth century. in a b. reas Kuth-ud-din marched from Della to Kork on which occasion. as the Muhammadan betorian informs us. 'those who were nise and neute were converted to Islam, but those who stood by their ancient faith were slain with the sword.' The enty was thenechoward administered by Musalman governors, but the native RIJIs retained much of their famor nower.

The District suffered during the invasion of Timur in the fourteenth century, and participated in the general misfortunes which marked the transitional period of the fifteenth. After the capture of Delhi by the Mughals, Bähar appointed his follower, Kachak Alf, governor of Koil (1526). Many musques and other monuments still remain, attesting the power and picty of the Musalman rulers during the palmy days of the Mughal dynasty. The period was marked, here as elsewhere, by frequent conversions to the dominant religion. But after the death of Aurangzeb, the District fell a prey to the contending hordes who ravaged the Doab. The Marathas were the first in the field, closely followed by the Jats. About the year 1757, Suraj Mal, a Jat leader, took possession of Koil, the central position of which, on the roads from Muttra and Agrato Delhi and Rohilkhand, made it a post of great military importance. The lats in turn were shortly afterwards oussed by the Afghous (1759), and for the next twenty years the District became a buttle-field for the two contending races. The various conquests and reconquests which it underwent had no permanent effects, until the occupation by Sindhia took place in 1784. The District remained in the hands of the Marathas until 1803, with the exception of a few months, during which a Robilla garrison was placed in the fort of Aligarh by Ghulam Kādir Khān. Aligarh became a fortress of great importance under its Maratha master; and was the dépôt where De Boigne drilled and organized his battalions in the European fashion. When, in 1802, the triple alliance between Sindhia, the Rājā of Nāgpur, and Holkar was directed against the British, the Nizām, and the Peshwa, Alīgarh was under the command of Sindhia's French general, Perron, while the British frontier had already advanced to within 15 miles of Perron undertook the management of the campaign; but he was feebly seconded by the Maratha chieftains, who waited, in the ordinary Indian fushion, until circumstances should decide which of the two parties it would prove most to their interest to espouse. In August, 1803, a British force under Lord Lake advanced upon Aligarh, and was met by Perron at the frontier. The enemy did not wait after the first round of grape from the British artillery, and Perron fled precipitately from the field. Shortly after he surrendered himself to Lord Lake, leaving the fort of Aligarh still in the possession of the Maratha troops, under the command of another European leader. On September 4 the British moved forward to the assault; but they found the fortifications.

planned with the experience of French engineers, and deleaded with true Markha obstinacy. It was only after a most intropid attack and an equally vigorous maistance that the formers, considered impregnable by the natives, was carried by the British assault; and with it fell the whole of the Upper Doah to the very foot of the Siwaliks. The organization of the conquered territory into British Districts was undertaken at once. After a short period, during which the pargraph now composing the District of Allgath were distributed between l'atcheath and Etawah, the nucleus of the present District was separated in 1801. Searcely had it been formed when the war with Holkar broke out, and his emissares stirred up the discontented tevenue-farmers who had made fortunes by unscrupulous oppression under the late Maththa rule to rise in tebellion against the new Government. This insurrection was promptly suppressed (1805). A second revolt, however, occurred in the succeeding year; and its ringleaders were only driven out after a severe assult on their fortres of Kamon's Other disturbances with the revenue-farmers arose in 1816. and it became necessary to dispontle their forts. The prace of the District was not again interrupted until the outbreak of the Mutiny.

News of the Mecnu revolt reached Koil on May 12, 1857. and was at once followed by the muting of the native troops quartered at Aligath, and the rising of the rabble. The Europeans escaped with their lives, but the usual planderings and hurnings took place. Until July 2 the factory of Mandrak was gallantly held by a small body of volunteers in the face of an overalielming rabble; but it was then abandoned, and the District fell into the hands of the rebels. A native committee of safety was formed to preserve the city of Koil from plunder; but the Maximan mob gested them, and one Nasim-ullih took upon himself the task of government. His excesses alienated the Hindu population, and made them more ready to side with the British on their return. The old Jax and Rajput finds broke out meanwhile with their accustomed fary; and, indeed, the people induleed in far worse excess torquis one another than towards the Europeans. On August 24 2 small British force moved upon Koil, when the tebels were easily defeated, and abandoned the town. Various other bodies of insurgents afterwards passed through on several occasions, but the District remained substantially in our procession; and by the end of 1857 the tebels had been completely expelled from the Deab.

Archaeology. There are many ancient mounds in the District where carvings of the Buddhist and early Hindu periods have occusionally been exposed, but none of these has been explored. The principal Muhammadan buildings are at Aligarb and Jalali.

The people

The District contains 23 towns and 1,753 villages. At the last four enumerations the population was as follows: (1872) 1,073,256, (1881) 1,021,187, (1891) 1,043,172, and (1901) 1,200,822. In 1876-7 the District suffered from famine, and in 1879 from fever. Owing to the extension of canal-irrigation, it escaped in 1896-7. There are six tahsils—Atrauli, Aligarh, Iglās, Khair, Hāthras, and Silandra Rao—the head-quarters of each being at a place of the same name. The chief towns are the municipalities of Koil or Aligarh, the head-quarters of the District, Hāthras, Atrauli, and Sikandra Rao. The following table gives the principal statistics of population in 1901:—

	E C	No	mpez al	ę	لَيْظ	5 5 5 5 .	able and and
Tohsil.	Area in square miles.	Towns	Villages.	Population	Population per Equare mile.	Percentage variation population then 18	Number Persons al to resd a

Sikandra Rao .	337	7	248	211,532	628	+ 13.5	5,508
District total	1,946	23	1.753	1,200,833	612	+ 15.1	34.538

Castes and occupations. The most numerous castes among Hindus are the Chamārs (leather-workers and labourers), 223,000; Brāhmans, 131,000; Jāts, 108,000; Rājputs, 91,000; Baniās, 45,000; Lodhas (cultivators), 40,000; Gadariās (cultivators and shepherds), 36,000; Korīs (weavers), 30,000; Kāchhīs (cultivators), 22,000; and Khatīks (poulterers and gardeners), 21,000. Jāts belong chiefly to the west of the United Provinces, and Kāchhīs and Lodhas to the centre. The Musalmāns are for the most part descended from converted Hindus. Shaikhs number 26,000; Pathāns, 20,000; Rājputs, 13,000; Saiyids, 6,000; and Mewātis, 6,000. Agriculturists form 47 per cent. of the total population. Rājputs own 23 per cent. of the total area, Jāts 20 per cent., Brāhmans 14 per cent., and Baniās 13 per cent. Brāhmans, Rājputs, and Jāts hold the largest areas as cultivators. General labour supports 13 per cent. of the population, personal

services to per cent, weaving 3 per cent, and grain-dealing 3 per cent.

Of the 4,900 native Christians, more than 4,700 belong to Christian the Methodist Episcopal Church, which started work here in 1885 and has ten branches in the District. The Church Missionary Society has had a station at Aligarh since 1863, and also has a branch at Häthras.

In the western tahalk, Khair and Igläs, there are distinct General sandy ridges, and the eastern part of the District also contains agricultural confight soil. There are other sandy tracts near the rivers. In disconst the control depression the chief characteristic is the presence of extensive plains of barren land called trans. In many cases these are covered with soline efflorescences (reh). There is a sharp distinction between the homelands and the outlying portion of each village, the former receiving most of the manure. The best lands are double cropped, and sugar-cane is little grown.

The tenures of the District are those commonly found, but Chief again a larger area than usual is held somindler, which includes 2,199 statistics mahals out of 3,334. Of the remainder, 649 mahals are and principalitideriand 486 bhairichari. There are also a few tolubality and crops. estates, the chief of which, Mussan, is described separately. Settlement is invariably made in these with the subordinate proprietors or bireaddies, who pay into the treasury the amount due to the talubaliers. The principal agricultural statistics for 1903-4, according to the village papers, are given below, in square miles:—

714.	HI.		Total	Celmand	Isrigated.	Cultitat
Attauli ,	^		343	266	543	25
Affgach .	4		356	746	167	21
Igias .	-		213	} e#7	} 7à	9
Khair .		+	407	292	229	£6
Hathras .	•	- 1	200	#39	313	11
Sikandra Ha	<i>i</i> ?•	•	337	212	1561	39
	7	cial	1,946	1,449	764	142

The chief food-crops with their area (in square miles) in 1903-4 were: wheat (386), harley (281), pawir (188), gram (203), maine (139), bigra (148), and arbar (78). The most important of the other crops is cotton (138).

Some experiments have been made in the reclamation of Improveiour land, but only with partial success. The most important were in ngricultural practice. of these was the establishment of a dairy farm at Chhorat near Aligarh. In some places plantations of babal trees have been made in barren soil. Satisfactory features are the increase in the area of wheat grown by itself for export, and in the double-cropped area. The area under gram is decreasing. From 1891 to 1900 the advances under the Agriculturists' Loans Act amounted to Rs. 61,000, of which Rs. 14,000 was lent in 1896-7. In 1993-4, Rs. 1,700 was advanced. Slightly larger advances have been taken under the Land Improvement Loans Act, amounting to Rs. 72,000 during the ten years ending 1900, and to as much as Rs. 13,000 in 1903-4. A large agricultural show is held annually at Aligarh. Important drains have been made in several parts of the District, especially in the central depression; but in the south-west of the District the spring-level has sunk considerably.

Cattle, horses, and sheep. There is no peculiar breed of cattle or sheep, and the best cattle are imported from beyond the Jumna. Horse-breeding has, however, become popular, and a number of stallions are maintained by Government. Since 1903 operations have been in charge of the Army Remount department.

Irrigation.

The Upper Ganges Canal passes through the centre of the District. East of the Kält Nadt the Anüpshahr branch of the same work supplies part of the Atrauli tabsil, and west of the Karon the Mät branch supplies Khair. The Lower Ganges Canal crosses the east of the District, but supplies no irrigation to it. The Iglas and Häthras tabsils are at present practically without canal-irrigation, but two distributaries have been projected to water the tract east of the Karon. The total area irrigated from canals in 1903-4 was 229 square miles. Well-irrigation is at present still more important, the area supplied in this way being 515 square miles. Other sources are insignificant. The Irrigation department maintains about 330 miles of drains.

Minerals

The chief mineral product of the District is kankar, which is used for road-making and for building. In the Sikandra Rao tahsil saltpetre and glass are manufactured from saline efforcescences.

Arts and manufacThe principal manufactures of the District are the weaving of cotton cloth and of cotton rugs and carpets, the latter being especially noted. Since 1904 the manufacture of indigo has been almost abandoned; and not one of seventy-five factories, which used to employ 4.500 hands, was working in that year. The postal workshops supply the Post Office department with numerous articles, and employ about 300

hands. There are three lock works with 320 workmen. Althrough the area under cotton has decreased, there were more than twenty steam gins and presses with 1,781 hands in 1903, and one cotton-spinning mill with 516 hands. The District also contains an important dairy farm, and there is a small manufacture of dried meat for Burma. The most striking feature of the industries in Allgorh is the large extent to which they have been developed and maintained by native capital and management.

Ginin and cotton are the principal articles of export; but Commetee, oilseeds, saltpetre, and country glass are also considerable items. Sugar, rice, piece-goods, spices, metals, and timber form the chief imports. Hüthras is by far the most important centre of trade, ranking second in the United Provinces to Cownpore. The trade and importance of Koil or Aligarh is, however, increasing, and Atrauli and Hardusganj are also thriving. The commerce of the District is largely with Cownpore, Bombay, and Calcutta.

Aligarh is well supplied with means of communication. Railway, The East Indian Railway passes through it from south to and roads, north, and a branch of the Oudh and Rohilkhand Railway from Moradabad and Bareilly meets it at Aligarh. The south of the District is crossed by the metre-gauge Campore-Achinera section of the Rajputana-Malwa Railway; and Hathras, which lies on this line, is also connected by a broad-gauge line with the East Indian Railway.

There are 243 miles of metalled roads, all in charge of the Public Works department, though 125 miles are maintained at the cost of Local funds. Resides these, 358 miles of unmetalled roads are also maintained by, and at the cost of, the District board. Every tabili town is connected by metalled road with the District head-quarters. The through lines which cross the District are the grand trunk road, the Muttra-Küsganj read, and the Agra-Morādābād road. Avenues of trees are maintained on about 90 miles.

Aligarh suffered severely from famine in former times. In Femre. 1783-4 many villages were deserted, and the memory of this terrible famine long survived. Droughts periodically caused more or less severe scarcity in the early years of the nineteenth century, culminating in the great famine of 1837. By 1860-1 the canal had made its influence felt; and in 1868-9 distress was confined to the areas not protected, and grain was exported to the Punjab and Central Provinces. In 1887 there was considerable distress in the same areas; but in 1896-7 the District

Vaccian-Gon. About 42,000 persons were successfully vaccinated in 1903-4, representing 35 per 1,000 of population. Vaccination is compulsory only in the municipalities.

[District Gazetteer (1875, under revision); W. J. D. Burkitt, Settlement Report (1903).]

Atrauli Tahsil.—North-eastern tahsil of Aligarh District, United Provinces, comprising the purganast of Atrauli and Gangiri, and lying between 27° 48' and 28° 9' N. and 78° 12' and 78° 38' E., with an area of 343 square miles. The population rose from 164,073 in 1891 to 198,034 in 1901. There are 289 villages and four towns, the largest of which is ATRAULI (population, 16,561), the tahul head-quarters. The demand for land revenue in 1903-4 was Rs. 3,77,000, and for cesses Rs. 61,000. The Ganges forms part of the northern boundary, and the Kali Nadi skirts the talsil on the west and The Nim Nadi and its tributary the Chhoiga flow through the middle. Between the Ganges and Nim Nadl the soil is naturally sandy, except in the Ganges khūdar, which is a rich alluvial deposit; irrigation is provided by the Anapshahr branch of the Upper Ganges Canal. The rest of the tahtil is a good loam tract, except where patches of tisar land are . found. In 1903-4 the area under cultivation was 266 square miles, of which 123 were irrigated.

Aligarh Tahsil (or Koil).—Central northern lahil of ; Aligarh District, United Provinces, comprising the parganas of Koil, Morthal, and Barault, and lying between 27° 46' and 28°. 8' N. and 77° 55' and 78° 17' E., with an area of 356 square miles. The population rose from 229,767 in 1891 to 268,012 in toot. There are 342 villages and three towns: Alicaru or Koil (population, 70,434), the District and taked head-quoters, JALALI (8,830), and HARDUAGANI (6,619). The demand for land revenue in 1903-4 was Rs. 4,57,000, and for resses! Rs. 76,000. On the east the takst is bounded by the Kali Nadi. In the centre lies a depression which has been much improved by two main-drainage cuts, and the talist is now one of the most prosperous in the District; ample irrigation is provided by the Upper Ganges Canal. In 1903-4 the area under cultivation was 2.16 square miles, of which rot were irrigated.

Iglās.—Central western tahul of Aligarh District, United Provinces, comprising the parganas of Hasangarh and Gorai, and lying between 27° 35' and 27° 55' N. and 77° 47' and 78° 3' E., with an area of 213 square miles. Population increased from 107,227 in 1891 to 118,803 in 1901. There are 209

villages and one town, Berwin (population, 1,871). The demand for land revenue in 1993-4 was Rz. 2,95,050, and for cover Rs. 49,000. The taket is intersected by high rulges of study soil with good loam between. There is no canal-irrigation, and well-irrigation has become more difficult of late years owing to a fall in the spring-level. In 1993-4 the area under cultivation was 187 square miles, of which only 78 were irrigated.

Khair.-North-western tabil of Aligarh District, United Provinces, comprising the pargents of Khan, Chandras, and Tappal, and lying between 27° 51' and 25' 11' N. and 77° 29' and 78° 7' E., with an area of 407 square miles. The population rose from 150.656 in 1891 to 178.867 in 1901. There are 272 villages and three towns, none of which has as many as 5,000 inhabitants; Khair, the takett head-quarters, has a population of 4,537. The density, 430 persons per square mile, is much below the District average. The demand for land revenue in 1903-4 was Rs. 4,11,000, and for cerees Rs. 66,000. The tabil is bounded on the west by the Junma, and has a considerable area of khadar land in which nothing grows but course grass and tamarisk, the baunt of innumerable wild hog. Large herds of cattle are grazed by the Gujar inhabitants of this tract, who are inveterate cattle-threves. The Mat branch of the Upper Ganges Canal provides impation. In 1903-4 the area upder cultivation was 202 square miles, of which 110 were irrigated.

Hathras Tahsil.—South-western takell of Algarh District, United Provinces, comprising the Arganas of Hathras and Mursan, and lying between 27° 29' and 27° 47' N. and 77 52' and 78' 17' E., with an area of 290 square miles. The popullation rose from 208,264 in 1891 to 225,574 in 1901. are 303 villages and five towns, the largest of which is HATHEAS, the taloff head-quarters (population, 42,57b). The density is 778 persons per square mile, while the District average is 612. The demand for Lind revenue in 1903-4 was Rs. 4,44,000, and for cences Rs. 74,000. The distern portion of the tehal ites low, and the drainage is naturally bad, but it has been much improved by artificial channels. There is no construigation, and well-irrigation has recently become more difficult owing to a fall in the spring-level; but an extension of the Mat branch of the Upper Ganges Canal is contemplated. In 1903-4 the area under cultivation was 230 square miles, of which 113 were irrigated.

Slkandra Rao Tahsil.—South-custem takil of Aligara

District, United Provinces, comprising the parganas of Sikandra and Akrābād, and lying between 27° 32' and 27° 53' N. and 78° 10' and 78° 32' E., with an area of 337 square miles. The population rose from 183,185 in 1891 to 211,532 in 1901. There are 248 villages and seven towns, the largest of which are Sikandra Rao (population, 11,372), the taksil head-quarters, and Pilkhana (5,109). The demand for land revenue in 1903-4 was Rs. 4,32,000, and for cesses Rs. 69,000. On the north-east the Kāli Nadi forms the boundary, and in the south one or two small streams rise. Irrigation is supplied by the Etāwah branch of the Upper Ganges Canal; and the tahtil is one of the most prosperous in the District, in spite of the presence of large waste areas covered with saline efflorescences. In 1903-4 the area under cultivation was 128 square miles, of which 164 were irrigated.

Mursan.—An estate situated in the Aligarh. Muttra, and Etah Districts of the United Provinces, with an area of 60 square miles. The demand for land revenue in 1903-4 was a lakh and for cesses Rs, 16,000, while the rent-roll was 2-1 lakhs. This is the most important Jat estate in the United Provinces. In the sixteenth or seventeenth century a lat, named Makan, came from Răiputăna to the neighbourhood of Mursan town, and he and his descendants acquired considerable estates, partly by clearing waste land. The result was the formation of a number of talukas or baronies, linked together by the kinship of the owners. Nand Ram, head of the clan, submitted to Aurangzeb, when the latter had firmly established himself, and was appointed an administrative official. He died in 1695, leaving fourteen sons, the eldest of whom was called Zulkaran, and predeceased his father. The Jat possessions were divided among the other children of Nand Ram; but Zulkaran's son, Khushal Singh, who obtained only two villages, attracted the notice of Saadat Khan, Navab of Oudh, and was granted the farm of other property. In 1749 he was succeeded by Puhup Singh, who largely increased the estates he had inherited by obtaining from the amils leases of villages which had fallen out of cultivation, or in which arrears of revenue were due. He also acquired a considerable share in the talukas left by Nand Rām, though dispossessed for a time by Sūrai Mal, Rājā of Bharatpur, and was the first of the family to assume the title of Raja. In 1803 Bhagwant Singh, son of Puhup Singh, was allowed to engage for payment of revenue of all the estates held by him, without any detailed inquiry into their internal circumstances, and retained some independent

judicial authority. He also received a jägir for services rendered in Lord Lake's campaign. A few years later both Bhagwant Singh and Daya Ram, talukdur of Hathras, another descendant of Nand Ram, came into conflict with the authorities for persistent default in the payment of revenue and defiance of the courts, and in 1817 troops were sent against them. Dayā Rām at first resisted, and on the fall of Hāthras his estates were confiscated; but Bhagwant Singh surrendered. He was treated leniently, and his possessions were not escheated, though his special police jurisdiction was cancelled. On his death in 1823 the process of direct engagement with the village proprietors was commenced, and his son, Tikam Singh, lost considerably. The separation of subordinate rights was completed in the first regular settlement, and was resisted in the courts by the Raja, but without success. Owing to his loyalty in the Mutiny, Rājā Tīkam Singh received an abatement of Rs. 6,000 a year in his assessment, and was also created C.S.I. The present owner of the estate is Rājā Dat Prasād Singh, who succeeded a grandson of Tikam Singh in 1902.

The principal place in the estate is Mursan, a small town on the Cawnpore-Achhnera Railway, with a population (1901) of 4,395, which is administered under Act XX of 1856. A primary school here contains 120 pupils.

Aligarh City.—Head-quarters of the District and tahsil of the same name, in the United Provinces, situated in 27° 53′ N. and 78° 4′ E., on the grand trunk road, at the junction of a branch of the Oudh and Rohilkhand with the East Indian Railway, 876 miles by rail from Calcutta and 904 miles from Bombay. The native city lies west of the railway and is generally called Koil or Kol, Aligarh being strictly the name of a fort beyond the civil station, on the east of the railway. Population has increased, especially in the last ten years. At the four enumerations the numbers were as follows: (1872) 58,539, (1881) 62,443, (1891) 61,485, and (1901) 70,434. Hindus number 41,076 and Musalmāns 27,518.

Various traditions explain the name of the city as derived from one Koshārab, a Kshattriya, or from a demon named Kol, who was slain by Balarāma, brother of Krishna. Buddhist and ancient Hindu remains prove the antiquity of the place; but nothing is known of its history till the twelfth century, when it was held by the Dor Rājputs, who were deseated by Kutb-ud-dīn, after a desperate struggle, in 1194. Koil then became the seat of a Muhammadan governor, and is recorded in the Ain-i-Akbari as, head-quarters of a sarkār in the Sūbah of

Agra. The later history of the place has been given under ALIGARII DISTRICT. The fort lies three miles from Koil, and is surrounded by marshy land and pieces of water which add to its strength, especially in the rams. It was called Muhammadgarh in the sixteenth century, after Muhammad, the ruler of Koil under the Lodfs. About 1717 it was called Sabitgarh after Sabit Khan, another governor, and about 1757 the lats changed the name to Rämgarh. The name Aligarh was given by Najaf Khān, who took the place. It was strengthened by its successive holders; and De Boigne and Perron, the French generals in Marāthā employ, took great pains to render it im-In 1803 Lord Lake captured the fort by storm. and said in his dispatch: 'From the extraordinary strength of the place, in my opinion British valour never shone more conspicuous.' The native troops at Aligarh joined the Mutiny of 1857; and the town was plundered successively by the Mewatts of the neighbouring villages, by the passing rebel soldiery, by Nasim-ullah during his cleven days' rule, and by the British troops.

The town of Kuil has a handsome appearance, the centre being occupied by the lofty site of the old Dor fortress, now crowned by a mosque built early in the eighteenth century, which was repaired during 1898-9 at a cost of more than Rs. 90,000, subscribed by residents in the District. A pillar, erected in 1253 to commemorate the victories of Sultan Nasirud-din Mahmad, was pulled down in 1862. In and about the town are several tombs of Muhammadan saints. Koil contains a general hospital with seventy-nine beds, and a female hospital with eighteen beds; and the Lvall library, opened in 1880, is a handsome building. The civil station has been adorned by a magnificent clock tower and by a fine public hall opened in 1898. The chief want of the city hitherto was a satisfactory drainage scheme, as a large part of it is built on swampr land round the fort, and the excavations from which earth was taken have become insanitary tanks. The outfall drains for sullage have now been completed.

Aligarh-Koil was constituted a municipality in 1865. During the ten years ending 1901 the income and expenditure averaged Rs. 64,000. In 1903-4 the income was Rs. 95,000, chiefly derived from octroi (Rs. 81,000). Expenditure amounted to a lakh, including general administration (Rs. 9,000), public safety (Rs. 16,000), drainage (Rs. 22,000), and conservancy (Rs. 22,000).

Koil has a considerable export trade in grain, indigo, and

cotton, but it is not so important as Hāthras. It is, however, becoming to some extent a manufacturing centre. The Government postal workshop, which turns out numerous articles required by the department, includes a steam printing press, employing 220 men in 1903. There are three large lock factories, employing more than 300 hands, and a number of smaller concerns. Three cotton gins and one press employed 285 workmen in 1903. The dairy farm at Chherat, a few miles away, was opened by Government, but it is now privately owned and employs about 100 hands. There is also a small manufacture of inferior art pottery, and dried meat is prepared for export to Burma.

The municipality manages three schools and aids two others. attended by 1,000 pupils. The District board maintains the District and talists schools with 287 and 175 pupils respectively, three branch schools with more than 300 pupils, and two girls' schools with so. Aligarh is, however, chiefly celebrated for the Muhammadan Anglo-Oriental College. This institution owes its foundation to the labours of the late Sir Saiyid Ahmad Khan, K.C.S.I., to improve the condition of his co-religionists. He founded a society, called the Alīgarh Institute, with the primary purpose of inquiring into the objections felt by the Musalman community to the ordinary education offered by Government. In 1875 a school was opened, which was attended by fifty-nine boys during the first year. Notwithstanding opposition and apathy, the movement progressed rapidly, and Sir Saiyid ultimately obtained support from all parts of India. The school was affiliated to the Calcutta University up to the First Arts standard in 1878, and up to the B.A. standard in 1881. It was subsequently affiliated to the Allahabad University, which was not founded till 1887. In 1904 there were 353 students in the school, 269 in the college, and 36 in the law classes; 76 of the total number were Hindus. Since the foundation-stone of the permanent buildings was laid in 1877 there have been large extensions. The college now includes five quadrangles of students' quarters, and also hires several houses for students, and it contains a magnificent hall and a hospital. The income and expenditure amount to about a lakh, and the Government grant is Rs. 18,000 annually. Students come from all parts of India, and even from Burma, Somaliland, Persia, Baluchistān, Arabia, Uganda, Mauritius, and Cape Colony. Between 1803 and 1902 the number of degrees in Arts taken by students of the Aligarh College was 24 per cent. of the total number conferred on Muhammadans in the whole of India. The Aligarh Institute society is extinct; but the Gazette, which was formerly issued by it, is now issued by the Honorary Secretary to the college.

Atrauli Town.—Head-quarters of the taksil of the same name in Aligarh District, United Provinces, situated in 28° 2' N. and 78° 18' E., on a metalled road from Aligath Population (1901), 16,561. The town was founded about the twelfth century, but little is known of its early history. It was a centre of local disaffection during the The Muhammadan inhabitants, who are chiefly Mutiny. descended from converted Hindus, have always had a bad reputation for turbulence; and during the rebellion the town was in the hands of the insurgents from June till September, 1857, when order was restored. The chief public buildings are the tahsili, which was once a fort, the town hall, dispensary, and school. Attract has been a municipality since 1865. During the ten years ending 1001 the income and expenditure averaged Rs. 11,000. In 1903-4 the income was Rs. 17,000, chiefly derived from octroi (Rs. 13,000), and the expenditure was Rs. 17,000. The trade is largely local, and includes grain, sugar, cotton, cloth, and metals. There is one cotton gin, which employed 192 hands in 1903. Four schools are attended by 600 pupils.

Harduāganj.—Town in the District and tahsīl of Alīgarh, United Provinces, situated in 27° 56 N. and 78° 12 E., 6 miles east of Alīgarh town. Population (1901), 6,619. Tradition assigns the foundation to Har Deva and Balarāma, brothers of Krishna; but no ancient remains have been found. The Chauhān Rājputs say they settled here when Delhi was taken by the Musalmāns. In the eighteenth century Sābīt Khān improved the town considerably. There is a good bazar, lined with brick-built shops, and the town contains a police station, post office, and school. It was formerly a municipality, but is now administered under Act XX of 1856, with an income of Rs. 1,150. The chief imports are sult, timber, and bamboos, and the chief exports cotton and grain. A cotton gin has been set up which employed 106 hands in 1903. The primary school has 90 pupils, and there are two girls' schools with 29.

Hathras City.—Head-quarters of the tabsil of the same name in Aligarh District, United Provinces, situated in 27° 36' N. and 78° 4' E., on the roads from Muttra to the Ganges and from Agra to Aligarh, and on the Cawnpore-Achinera Railway, and also connected with the East Indian Railway by a short

branch; distance by rail from Calcutta 857 miles, and from Bombay 890 miles. Population is increasing rapidly: (1872) 23,589, (1881) 34,932, (1891) 39,181, and (1901) 42,578. In 1001 Hindus numbered 36,133 and Musalmans 5,482. After the British annexation in 1803, the talukdar, Daya Ram, a Jat of the same family as the Raja of Mursan, gave repeated proofs of an insubordinate spirit; and in 1817 the Government was compelled to send an expedition against him under the command of Major-General Marshall. Hathras was then one of the strongest forts in Upper India, the works having been carefully modelled on the improvements made in the fort at ALIGARH. After a short siege, terminated by a heavy cannonade, a magazine within the fort blew up and destroyed half the garrison. Dayā Rām himself made his escape under cover of the night, and the remainder of the garrison surrendered at discretion. During the Mutiny the town was kept tranquil by Chaube Ghansham Das, a blind pensioned tahsildar, who was afterwards murdered by the rebels at Kasganj. The town is essentially a trading centre, and the site is crowded. A project for improved drainage is under consideration, and it is also proposed to bring a water-supply from the Mat branch canal. The chief public buildings are the municipal hall and male and female dispensaries. The Church Missionary Society and Methodist Episcopal Mission have branches here.

Hāthras has been a municipality since 1865. The income and expenditure during the ten years ending 1901 averaged Rs. 34,000. In 1903-4 the income was Rs. 66,000, chiefly from octroi (Rs. 53,000), and the expenditure was Rs. 54,000. The municipality also had a closing balance of Rs. 26,000 and Rs. 31,000 invested.

Hāthras was a place of some importance even before British rule, and now it ranks second to Cawnpore among the trading centres of the Doāb. There is a large export trade in both coarse and refined sugar. Grain of all sorts, oilseeds, cotton, and gh form the other staples of outward trade; while the return items comprise iron, metal vessels, European and native cloth, drugs and spices, and miscellaneous wares. The town is becoming a considerable centre for industrial enterprise. It contains six cotton gins and five cotton presses, besides a spinning mill. These factories employed 1,074 hands in 1903. There are two schools with 300 pupils.

Jalāli.—Town in the District and tahsīl of Alīgarh, United Provinces, situated in 27°52'N. and 78°16 E., 11 miles south-east of Alīgarh town. Population (1901), 8,830. The chief inhabi-

tants are the Saiyids, Shiahs by sect. They are descendants of one Kamāl-ud-dīn, who settled here about A.D. 1205. This Saiyid family subsequently expelled the old Pathān landholders, and obtained full proprietary rights in the town, which they still possess. The family has supplied many useful subordinate officers to the British Government. The town contains a considerable number of imāmbāras, one of which is a handsome building. Jalālī is administered under Act XX of 1856, the income being about Rs. 1,700. There is a primary school with 60 pupils, and the Muhammadans maintain several schools for reading the Korān. The place has little trade.

Pilkhana.—Town in the Sikandra Rao tahsil of Aligath District, United Provinces, situated in 27° 51′ N. and 78° 17′ E., 11 miles south-east of Aligarh town. Population (1901), 5,109. The town is old, and gave its name to a taluka farmed to Dayā Rām of Hūthras at the beginning of British rule. It is administered under Act XX of 1856, with an income of about Rs. 1,200. There is a primary school with 60 pupils.

Sikandra Rao Town.—Head-quarters of the taksil of the same name, in Aligarh District, United Provinces, situated in 27° 41' N. and 78° 23' E., on the grand trunk road and on the Campore-Achinera Railway. Population (1901), 11,372. The town was founded in the fifteenth century by Sikandar Lodi, and afterwards given as a jagir to Rao Khan, an Afghan, from which circumstances the double name is derived. During the Mutiny of 1857, Ghaus Khan, of Sikandra Rao, was one of the leading rebels, and held Koil or Aligarh as deputy for Walidad Khan of Malagarh in Bulandshahr District. Kundan Singh, a Pundir Rājput, did good service on the British side, and held the pargana as nazint. Sikandra Rao is a squalid, poor-looking town, on a high mound surrounded by low, badly-drained environs. A great swamp spreads eastwards, attaining a length of a miles in the rains. There is a mosque dating from Akbar's time, and a ruined house in the town was once the residence of a Muhammadan governor. The public buildings include the takstli, dispensary, and school. Sikandra Rao has been a municipality since 1865. During the ten years ending 1901, the income and expenditure averaged Rs. 8,000. The income in 1903-4 was Rs. 13,000, chiefly derived from octroi (Rs. 9,000), and the expenditure was Rs. 14,000. The town is declining, and its trade is chiefly local. There is a small export of glass and saltpetre, which are made in the neighbourhood. The middle school has 220 pupils, and five primary schools 270.

## AGRA DIVISION

Agra Division.—A Division in the United Provinces, lying between 26° 22' and 28° 2' N. and 77° 17' and 80° 1' E., with an area of 10,078 square miles. It is situated in the west of the Provinces, and the greater portion forms the central part of the Doan or area between the Jumna and Ganges rivers. On the north lie Aligarh District in the Meerut Division, and the Puniab District of Gurgaon, while the Ganges forms most of the eastern boundary, dividing the Agra from the Bareilly Division and from Oudh. The southern border meets the Allahabad Division and the States of Gwalior and Dholpur. while the western frontier marches with Bharatpur State. head-quarters of the Commissioner are at AGRA CITY. population of the Division has fluctuated considerably, as shown by the figures of the last four enumerations: (1872) 5,030,247, (1881) 4,834,064, (1891) 4,767,375, and (1901) 5,249,542. In 1877-8 the Division suffered from famine, and between 1881 and 1891 from floods. In the last decade the eastern Districts recovered rapidly. The density is 521 persons per square mile, compared with 445 for the Provinces as a whole. The Division is smaller than any other in the Provinces except Gorakhpur, but ranks seventh in population. In 1901 Hindus formed oo per cent. of the total and Musalmans o per cent., while among the followers of other religions were Jains (28,205), Christians (10,875, of whom 9,847 were natives), and Aryas (10,736). The Division comprises six Districts, as shown below :---

		Aren in square miles.	Population, 1901.	Land revenue and cesses for 1901-4, in thousands of rupees.		
Muttra .		1,445	763,099	17,57		
Agra,		1,845	7,000,528	19.75		
Farrukbābād		1,685	925,812	14,37		
Mainpuri		1,675	829,357	14,45		
Etāwah .		1,691	806,798	15,38		
Etah .		1,737	863,948	13,76		
	Total	10,078	5,249,543	95,22		

The Districts of Muttra, Agra, and Ethwah lie on both sides of the Jumna, and a small portion of Farrukhābād extends east of the Ganges, while Etah and Mainpuri lie entirely in the The Division contains 62 towns and 8,043 villages. The largest towns are Agra (population, 188,022 with cantonments), FARRUKITĀBĀD (67,338 with Fatehgarh and cantonments), MUTTRA (60,042 with cantonments), ETAWAH (42,570), and Brindapan (22,717). The chief places of commercial importance are Agra, Farrukhābād, and Mainpuri. and Brindaban are important centres of Vaishnava religion, being connected with the life of Krishna, the eighth incarnation of Vishnu. KANAUJ was the chief town of several great dynastics in Northern India before the Muhammadan invasion. Agra was the capital of the Mughal empire during the sixteenth and part of the seventeenth centuries, and successive emperors have left memorials of their rule in stone and marble which are unrivalled throughout India.

Houndaries, configuration, and hill and niver systems,

Muttra District (Mathuri).-North-western District of the Agra Division, United Provinces, lying between 27" 11' and 27° 58' N. and 77° 17' and 78° 13' E., with an area of 1,445 square miles. It is bounded on the north by the Punjab District of Gurgaon and by Aligarh; on the east by Aligarh and Etah; on the south by Agra; and on the west by the Bharatpur State. Muttra District lies on both sides of the Jumna, which is fringed with ravines. In the centre of the western' border the outlying spurs of the Aravallis penetrate the District, but do not rise more than 200 feet above the plain. Muttra is remarkable for the absence of rivers. Besides the Jumna there are no channels, except the Karon or Karwan which flows across the east of the District, and the Patwai or Patwaba which joins the Jumna in the Mat taluil. The Jumna has left a chain of swamps, representing an older channel, cast of its present bed. One of these is called Nohjhil, a shallow marsh, which before it was drained sometimes attained a length of 6 miles in the mins. There is a curious depression in the west of the District, which extends from the Bhamtpur and Alwar States, but there is no flow of water.

Geology.

The greater part of the District is the ordinary alluvium of the Gangetic plain, but the western hills are chiefly composed of quartzite. Kankar or nodular limestone is common, especially in the Jumna ravines. While the water in many wells is brackish, saline efflorescences are less common than elsewhere in the Doab.

Botanr.

The flow of the western half of the District resembles that

of Rājputāna. Early in the nineteenth century Bishop Heber was struck by the wildness of the country. There are still large stretches of waste land, especially in the Chhāta tahsīl, covered with jungle in which the ber (Zizyphus Jujuba) is the largest tree. Along the canal the babūl (Acacia arabica) has been largely planted, and the nīm (Melia Azadirachta) is sairly common, but other trees are scarce. The total area of grove land is less than 9 square miles.

Leopards, wolves, hyenas, and nilgai are found chiefly in Fanna. the hilly tracts near the Bharatpur border; and wild cattle from the Bharatpur State formerly did much damage, but are now kept out by a continuous fence and ditch. Wild hog are plentiful in the Jumna ravines and khādar, and Muttra is celebrated for 'pig-sticking.' Antelope are very common, and the chinkāra or 'ravine deer' is also found. In the cold season snipe and duck abound in the swamps and small tanks. Fish are found in the Jumna and in many tanks, but are not much used for food.

The climate is very dry and hot, owing to the proximity of Climate sandy deserts to the west. Great extremes of temperature and temperature. In January the mean temperature falls to 60°, while in June it rises to over 93°. In winter ice is not uncommonly formed in shallow puddles in the early morning, while in April, May, and June hot winds blow with great force.

The annual rainfall during the last seventeen years has Rainfall averaged 26 inches, which is evenly distributed, though the Jumna valley receives slightly more than the portions of the District on either side. Variations from year to year are large; the fall has been less than 16 inches, and has reached nearly 36.

Muttra was the capital of the ancient kingdom of SÜRASENA, History, and its importance as a religious centre is referred to by Ptolemy, who calls it 'Modoura of the gods.' Arrian and Pliny describe it as Methora. The earliest facts relating to its history are derived from the coins found there, which indicate that Muttra was ruled by a series of Hindu Rājās in the second and first centuries B.C., followed by Saka Satraps, who gradually assume Hindu names. In the first and second centuries A.D., the inscriptions, found in considerable numbers, prove that the sway of the great Kushan kings was recognized here, and Muttra was a great stronghold of the Jains. In the sixth century Hiuen Tsiang found a large city, containing 20 monasteries with 2,000 priests. Muttra was probably one

A list of trees is given in Mr. F. S. Growse's Mathura (p. 421).

of the places sacked by Mahmud of Ghazni in tor8-o. but the District plays little part in the early Muhammadan period, when it was largely held by Mewatts. political history is slight. Muttra is important in the religious history of modern Hinduism. The reformed Vaishnava creeds had their origin in Southern and Eastern India, but in the fifteenth and sixteenth centuries several new sects were founded here, which still influence Hindu thought. western side of the District is celebrated as the Braj Mandal or country of Krishna, and almost every grove, mound, and tank is associated with some episode in his life. Throughout the year, and especially in the rains, bands of pilgrims from all parts of India may be seen reverently visiting the holy shrines. The increased religious zeal of the Hindus attracted the notice of Shah Jahan and Aurangzeh, who took stens to repress it-

As the Mughal empire fell to pieces, the history of the District merges in that of the lats of Bharatpur, and only acquires a separate individuality with the rise of Suraj Mal. In 1712 Badan Singh, father of the famous adventurer, proclaimed himself leader of the Tats, and took up his residence at Sahār, where he built a handsome palace. In his old age he distributed his possessions among his sous, giving the southwestern portion of Bharatpur to his youngest, Pratup Singh, and the remainder of his dominions, including Muttra, to his eldest, Süraj Mal. On Badan Singh's death, Süraj Mal moved to Bharatpur and assumed the title of Raji. In 1748 the Mughal emperor, Ahmad Shah, invited the Jat leader to join with Holkar under the command of Navab Saldar Jang in suppressing the Robilla rebellion. When Safdar Tang revolted (see Ouder), Süraj Mal and his lats threw in their lot with him, while Ghāzī-ud-din, the Wazir, obtained the help of the Marathas. Safdar Jang retreated to Oudh, whereupon Ghaziud-din laid siege to Bharatpur, but, mistrusting his Maratha allies, shortly returned to Delhi, deposed Ahmad Shah, and raised Alamgir II to the throug. When Ahmad Shah Durrani invaded India in 1757, Sardar Jahan Khan endeavoured to levy tribute from Muttra; but finding that the people withdrew into their forts, he fell back upon the city, plundered its wealth, and massacred the inhabitants. Two years later the new emperor was murdered, and the Afghan invader once more advanced upon Delhi. Ghāzī-ud-dīn fled to Muttra and Bharatpur, and joined the Hindu confederacy of Marathas and Jats which shattered itself in vain against the forces of Ahmad Shah at Panipat in January, 1761. Surai Mal, however, withdrew his

forces before the decisive battle, marched on Agra, ejected the Marāthās, and made himself master of the city.

Ahmad Shāh having returned to Afghānīstān, Sūraj Mal thought it a favourable opportunity to attack the Rohilla chief, Najtb-ud-daula. Marching to Shāhdara, 6 miles from Delhi, he was, however, surprised, captured, and put to death in 1763 by a small party of the imperialists. Two of his sons, who succeeded to his command, were successively murdered, and the third, Nawal Singh, after losing Agra during Zābita Khān's rebellion, died in 1776. The fourth son, Ranjīt Singh (not to be confounded with the more famous Sikh Māhārājā), inherited Bharatpur with only an insignificant strip of territory.

During the contest between Sindhia and the Rājput princes in 1788, the former obtained the aid of the Jāts in raising the siege of Agra, then held by Sindhia's forces, and besieged by Ghulām Kādir. In 1803 Ranjīt Singh of Bharatpur joined Lord Lake in his campaign against Sindhia, with a force of 5,000 Jāt horsemen; and upon the deseat of the Marāthās he received as a reward the south-western portion of Muttra, with Kishangarh and Rewārī. But in the following year he gave shelter to Holkar, when a fugitive after the battle of Dīg. This led to the first siege of Bharatpur by Lord Lake, and, although his capital was not taken, Ranjīt Singh lost the territory granted to him in 1803.

Thenceforward Muttra remained free from historical incidents till the Mutiny of 1857. News of the Meernt outbreak reached Muttra on May 14 in that year. Two days later, some Bharatpur troops arrived, and marched for Delhi under British officers. The force halted at Hodal on the 26th; and on the 30th the sepoys sent to escort the treasure from Muttra to Agra proved mutinous, so that the officials were compelled to fly and join the troops at Hodal. Shortly afterwards the Bharatpur force likewise mutinied, and the Europeans fled for their lives. The Magistrate returned to Muttra, and after vainly visiting Agra in search of aid, remained with the friendly Seths (native bankers) till June 14. After the mutiny of the Gwalior Contingent at Aligarh on July 2, the Nimach insurgents, marching on Muttra, drove all the Europeans into Agra. The whole eastern portion of the District then rose in rebellion, till October 5, when the Magistrate made an expedition from Agra, and captured the rebel leader, Deokaran. Cotton's column shortly afterwards proceeded through the District to Kosī, punishing the insurgent villages; and after its return to Agra through Muttra no further disturbances took place. In the nineteenth century the religious teaching of Muttra affected Dayanand, founder of the Arya Samaj, who studied here for a time.

Archaeology. The town of Muttra and its neighbourhood are rich in archaeological remains, and the exploration of the Jain stipa in the Kankālī tila or mound has yielded valuable dated inscriptions of the Kushan kings. The finest Hindu temples at Muttra were demolished or converted into mosques by the Muhammadans, but some have survived at Brindāban and Mahāran. There are also fine specimens of the Jāt architecture of the eighteenth century at Gouardhan.

The people.

Muttra contains 14 towns and 837 villages. Population has hardly yet recovered from the effects of the famine of 1877-8. The number at the four enumerations was: (1872) 782,460, (1881) 671,690, (1891) 713,421, and (1901) 763,099. The District is divided into five tahsik-Muttra, Chuāta, Māt, Mahāban, and Sadābāb—the head-quarters of each being at a place of the same name. The principal towns are the municipalities of Muttra, Brindāban, and Kosī. The following table gives the chief statistics of population in 1901:—

Tahsil.	Area in equate miles.	Num Australia	Villages, o	Population	Population per equare mile	Percentage of variations in population be- tween 1801 and 1901	Number of personsuble to read and
Muttra Chbūta	896 406 323 940 180	6 2 4 2	218 158 149 199 127	246,521 173,756 97,370 136,566 108,886	623 428 437 569 605	+ 5.0 + 13.2 + 8.9 + 2.3 + 6.6	17,100 5,463 2,683 4,934 2,818
District total	1,445	1.4	837	763,099	528	7 7.0	32,958

Of the total, 89 per cent. are Hindus and 10 per cent. Musalmāns. The density of population is higher than the Provincial average, but lower than in the other Doāb Districts. Between 1891 and 1901 the rate of increase was higher than in the Provinces as a whole. About 99 per cent, of the people speak Western Hindi, the prevailing dialect being Braj.

Chales and occupations. The most numerous Hindu caste is that of Chamars (leatherworkers and labourers), 120,000. Brāhmans number 115,000; Jāts, 102,000; and Rājputs, 67,000. The numbers then decrease, and the largest castes are: Korīs (weavers), 17,000; Gadarias (shepherds), 16,000; and Gūjars, 14,000. The Jāts,

<sup>1</sup> Efigraphia Indica, vols, land ii; V. A. Smith, The Jain Stupa at Mathura.

Gujars, and Aherias (14,000) belong to the western Districts; and the Ahivasis, who claim to be Brahmans and number 1,400, are hardly found outside this District. Among Muhammadans, Shaikhs number 13,000; Rajputs, 9,000; and Pathans, 7,000. The agricultural population forms 53 per cent. of the total, while general labourers form 10 per cent., and those supported by personal services 8 per cent,

There were 2,031 native Christians in 1901. The earliest Christian mission was that of the Baptists, who commenced work early missions. in the nincteenth century. It was followed in 1860 by the Church Missionary Society, and in 1887 by the American Methodist Church. The last of these has been most successful, and 1,887 of the native Christians in 1901 were Methodists.

A considerable difference is to be noted between the tracts General east and west of the Jumna. The latter is less fertile, and agricultural conirrigation was difficult before the construction of the Agra dilions. Canal, as the subsoil water is often brackish. Hamlets, apart from the main village site, are almost unknown; and this custom, which had its origin in the troubled times when the cultivator ploughed with sword and shield lying in a corner of his field, affects cultivation, as manure is applied only to the home land near the village. On the other hand, Jats, who are the best cultivators, are chiefly found west of the Jumna, and the eastern talistis are plagued by a weed called baisuri (Pluchea lanceolata). Besides the barren land bordering on the Jumna ravine, there is a strip of sandy soil along the foot of the hills on the western border.

The tenures are those commonly found in the Provinces. Chief agri-In 1883, out of 1,375 mahāls 478 were zamīndāri, 492 pattīdāri caltural statisties and imperfect pattīdāri, and 505 bhaiyāchārā. West of the and princi-Jumna some villages belong to ialukdāri estates, chiefly to pal crops. The main agricultural statistics for 1903-4 are given below, in square miles:-

Tahsil.	Total.	Cultivated.	lrrigated.	Cultivable waste.	
Mutira	. 396	297	117	53	
Chhāta	. 406	329	113	44	
Mat	. 223	170	53	30	
Mahaban .	. 240	195	47	30	
Sadābīd	. 180	154	59	8	
Tota	1 2,445	1,145	389	155	

The chief food-crops are jowar and barley, which occupied

268 and 205 square miles respectively, or 23 and 18 per cent. of the net area cropped. Gram (193), wheat (153), and haira (93) are also important, while cotton covered an area of 131 square miles. The small area under specially valuable crops—sugar-cane, tobacco, and vegetables—is striking.

Improvements in agricultural practice. There have been no improvements of recent years either in methods or in the introduction of new seed. The principal change has been the substitution of wheat for cotton, largely owing to the extension of canals. A small but steady demand exists for loans under the Land Improvement and Agriculturists' Loans Acts, which amounted to Rs. 96,000 and Rs. 1,16,000 during the ten years ending 1900; but advances in the famine year 1896-7 account for Rs. 48,000 and Rs. 39,000 respectively. In 1903-4 the loans were only Rs. 1,500 and Rs. 1,065. With the extension of canal-irrigation, drainage has also been improved, especially in the Chhāta tahstl, and the Patwai or Patwāhā in Māt has been deepened. Private enterprise has drained the lake known as Nohjhīl, while a few miles south of Muttra a dam has been built by the samīndārs near Koela to keep out the Junna.

Cattle, horses, and sheep, The Jumna ravines and the khādar provide ample grazing-ground, but there is no indigenous breed of cattle. Kost is a great cattle mart, at which animals are sold which have been imported from the Punjab or Bharatpur State. Horse and mule breeding are becoming popular, and three horse and two donkey stallions have been provided by Government. The sheep are of the ordinary type.

Irrigation.

In 1903-4 the area irrigated was 389 square miles, out of a cultivated area of 1,145 square miles. Canals supplied 201 square miles, and wells 188. The western division of the District is amply served by the Agra Chnal and its distributaries. Up to 1903 the eastern portion had no canal-irrigation except in a few villages of the Mat taked; but the Mat branch of the Upper Ganges Canal now supplies every portion, irrigating 25,000 acres in the spring of 1904 and more than 20,000 in the autumn. Tanks and rivers are not used at all for irrigation, and the use of the former is forbidden by the religious sanctity attaching to most of them.

Minerals.

Sandstone is obtainable from the low hills in the Chhäut tahsil, but most of the stone used in the District is obtained from Agra or Bharatpur. The Giri Rāj, which is of sandstone, is considered so holy that to quarry it would be sacrilege. Kankar is found in all parts, and occurs in block form in the Sadābād tahsīl.

The manufactures of the District are not very important. Arts and Calico printing is carried on at Brindaban, and old flannel is manufacskilfully repaired. The masons and stone-carvers of Muttra are justly celebrated, and many houses and temples are adorned with the graceful reticulated patterns which they produce. A special paper used for native account-books is made here. and the District is noted for the quaint silver models of animals produced at Gokul. In 1003 there were 10 cotton gins and presses, employing about 970 hands. A few small indigo factories are still worked, but the industry is not thriving.

Grain and cotton are the chief exports, and the imports Commerce. include sugar, metals, oilseeds, and piece-goods, most of the trade being with Hathras. Muttra city is an important dépôt for through traffic. Thus cotton and oilseeds from Bharatpur State pass through here to Hathras, while sugar, salt, and metals are returned. Kosī, in the north of the District, is a great cattle market, where the peasants of the Upper Doab purchase the plough-animals brought from Rajputana or the Puniab.

The East Indian Railway runs for 7 miles across the east of Railways the District, with one station. The narrow-gauge Cawnpore- and roads. Achinera line enters the District at the centre of the eastern boundary, crosses the Jumpa, and then turns south. It provides communication with Hathras on the east and Agra on the south, and from Muttra city a short branch serves the pilgrim traffic to Brindaban. An extension of the Midland section of the Great Indian Peninsula Railway from Agra to Delhi, passing through Muttra, was opened in 1905.

The District is well supplied with roads. Out of 500 miles, 171 are metalled and 320 unmetalled. Excluding 57 miles of metalled roads, all of these are kept up at the cost of Local funds. Avenues of trees are maintained on 31 miles. The main route is that from Agra to Delhi, a famous road under native rule, which traverses the western half of the District from south to north. Other roads pass from Muttra west to Dīg and Bharatpur, east through Hāthras to the Ganges, and south-east to Jalesar and Etah. The Agra Canal was used for navigation, but has been closed for this purpose since 1004

Though precise records do not exist, famine must have been Famine. frequent before British rule began, and the awful disaster of 1783-4 was especially severe in this tract. In 1813 the north of the District was a centre of great distress. Many persons perished of hunger, or sold their wives and children for a few

nunees or a single meal. In x825-6 a terrible drought affecting the neighbouring country was especially felt in the Mahaban tabil. In 1827-8 there was scarcity in all parts of the District, but it was not so severe as in the Central Doab; and in 1860-1 and 1868-9 Muttra again suffered less than other Districts, though distress was fell The famine of 1877-8 struck this tract more heavily than any other District in the Division, and mortality rose to 77.56 per 1,000. The monsoon fall in 1877 was only 4-3 inches, and the deficiency chiefly affected the main food-crops which are raised on unirrigated land. As usual, distress was aggravated by an influx of starving people from Rajputana. In 1896-7 famine was again felt, especially in the Mahaban and Sadabad tahsik, which had no canal-irrigation. In June, 1893, the number on relief works amounted to 23,000. About Rs. 86,000 was advanced for the construction of temporary wells; chiefly east of the Jumna, and 1-8 lakhs of revenue was remitted or suspended. There was scarcity in 1899-1900, and advances were freely made, but relief works were not found necessary. The canal extensions of 1903 have probably secured the District against serious famine in the future.

District

The ordinary staff of the District includes a member of the Indian Civil Service and three Deputy-Collectors recruited in India. A tahsildär resides at the head-quarters of each of the five tahsils. Two Executive Engineers of the Canaldepartment are stationed at Muttra.

Civil justice and crime.

Muttra is included in the Civil and Sessions Judgeship of Agra. There are two Munsifs, one at Muttra and one at Mahāban. Owing to its situation near a Native State, serious dacoities are not infrequent, and cattle-theft is common. Jāts, and in some places Gūjars, are the chief cattle-lifters; and langūri is regularly practised, a system by which the owner recovers his stolen property on payment of a certain proportion of its value. The Mallāhs (boatmen and fishermen) of the north of the District are noted pickpockets and railway-thieves, frequenting all the large fairs of the United Provinces, and even visiting Bengal.

land revenue administration.

Most of the District came under British administration at the end of 1803, and was then distributed between the surrounding Districts of Farrukhābād, Etāwah, and Agra. In 1804 the parganas included in Farrukhābād and Etāwah were made over to Aligarh; but in 1823-the nucleus of the eastern part of the District was formed with head-quarters at Sadābād, and in 1832 Muttra, which had always been a cantonment.

became the civil capital. There are still enclaves belonging to Bharatpur State, the Raja of which held part of the present District up to 1826. The early settlements were made under the ordinary rules for short periods of one, three, or five years, and were based on estimates. In the western part of the District the farming and talukdari system was maintained for some time as in Alīgarh, and was even extended, as talukdāri rights were sometimes granted in lieu of farms. In the eastern portion farmers and talukdars were set aside from the first. The first regular settlement under Regulation VII of 1822 was made on different principles. West of the river an attempt was made to ascertain the rental 'assets,' while in the east the value of the crops was estimated. The former settlement was not completed when Regulation IX of 1833 was passed, and the latter broke down from the excessive demand imposed, The revenue of the whole District (excluding eighty-four villages transferred from Agra in 1878) was therefore revised under Regulation IX of 1833, and an assessment of 13.6 lakhs fixed. The next settlement was made between 1872 and 1879, The method adopted was to assess on what were considered fair rents, arrived at by selection from actual rents paid. These were applied to the different classes of soil into which each village was divided. The revenue sanctioned amounted to 15.3 lakhs, to which must be added I lakh, the revenue of villages transferred from Agra in 1878. The incidence of revenue fell at Rs. 1-13-0 per acre, varying from Rs. 1-4-0 to Rs. 2-14-0. The bad years following the famine of 1877-8 and the fever of 1879 led to a decline in cultivation; and revisions of settlement were made between 1887 and 1891. which reduced the demand by a lakh. The settlement has now been extended for a further period of ten years. Collections on account of land revenue and revenue from all sources are shown below, in thousands of rupees:-

		1880-t.	1890-1.	1900-1.	1903-4.
Land revenue Total revenue	•	15,95 19,73	15,08 20,72	15,41 21,66	21,22 24,90

Outside the three municipalities, MUTTRA, BRINDABAN, and Local self-Kosī, and eleven towns administered under Act XX of 1856, governlocal affairs are managed by the District board, which has a total income and expenditure of about 1.3 lakhs, chiefly derived from rates. About half the expenditure is incurred on the maintenance of roads and buildings.

Police and juils.

There are 24 police stations, and the District Superintendent of police is assisted by 4 inspectors. In 1904 the force consisted of 91 subordinate officers and 392 constables, besides 320 municipal and town police, and 1,640 rural and road police. The District jail has accommodation for 318 prisoners.

Educa-

Muttra takes a fairly high place in the Provinces in regard to literacy, and 4.3 per cent. of the population (7.8 males and 0.3 females) could read and write in 1901. This is largely owing to its importance as a religious centre. The number of public schools fell from 165 in 1880-1 to 132 in 1900-1, but the number of pupils increased from 5,505 to 6,511. In 1903-4 there were 197 public schools with 8,981 pupils, including 478 girls, besides 82 private institutions with 1,781 pupils. All of these schools were primary, except nine of the public and two of the private schools. The expenditure on education in 1903-4 was Rs. 43,000, of which Rs. 31,000 was provided from Local and municipal funds and Rs. 8,300 by fees. Most of the schools are managed by the District and municipal boards.

Hospitals and dispensaries. There are eight hospitals and dispensaries, which contain accommodation for 77 in-patients. In 1903 the number of cases treated was 58,000, of whom 995 were in-patients, and 3,600 operations were performed. The total expenditure was Rs. 16,000, chiefly from Local funds.

Vaccina-

In 1903-4 the number of persons vaccinated was 24,000, representing 31 per 1,000 of population. Vaccination is compulsory only in the municipalities and the contonment.

[R. S. Whiteway, Settlement Report (1879); F. S. Growse, Mathurā (Allahābād, 1883); District Gasetteer (1884, under revision); V. A. Smith, The Jain Stupa at Mathurā.

Muttra Tahsīl.—South-western tahsil of Muttra District, United Provinces, conferminous with the parguna of Muttra, lying between 27° 14' and 27° 39' N. and 77° 20' and 77° 51' E., with an area of 396 square miles. Population rose from 234,914 in 1891 to 246,521 in 1901. There are 218 villages and six towns, the largest of which are MUTTRA (population, 60,042), the District and taksil head-quarters, BRINDĀBAN (22,717), and GODARDHAN (6,738). The demand for land revenue in 1903–4 was Rs. 2,94,000, and for cesses Rs. 55,000. The density of population, 623 persons per square mile, is the highest in the District. The tahsil extends from the Jumna to the low hills on the Bharatpur border, and contains the celebrated hill called Giri Rāj. To the east the influence of the Jumna extends for three miles inland, low alluvial

soil, ravines, and sandy dunes being found along its banks. From the edge of this broken ground a flat uniform plain stretches to the hills, without a single stream. The principal autumn crops are jowar, cotton, and bājra; the spring crops are gram and wheat. In 1903-4 the area under cultivation was 297 square miles, of which 117 were irrigated. The Agra Canal supplies an area twice as large as that served by wells.

Chhāta Tahsīl.—North-western talsīl of Muttra District. United Provinces, conterminous with the pargana of the same name, lying between 27° 33' and 27° 56' N. and 77° 17' and 77° 42' E., with an area of 406 square miles. Population rose from 153,465 in 1891 to 173,756 in 1901. There are 158 villages and two towns, Kosī (population, 9,565) and CHHĀTA (8,287), the tahsīl head-quarters. The demand for land revenue in 1903-4 was Rs. 3,38,000, and for cesses Rs. 50,000. The density of population, 428 persons per square mile, is the lowest in the District. Up to 1894 the northern portion formed a separate tahsīl called Kosī. The tahsīl is bounded on the east by the Jumna, which is fringed with ravines and a sandy strip of land; but these are not so extensive as in the Muttra taksil to the south. A ridge of sand traverses the centre, and another narrow belt is found farther west, beyond which is a shallow depression not sufficiently marked to form a drainage channel. The western boundary is formed by the Bharatpur State, and in places low stone hills are found. In the north the wells are very deep and the water they contain is usually brackish. The autumn barvest is more important here than the spring harvest, and jowar is the most common staple. In 1903-4 the area under cultivation was 329 square miles, of which 113 were irrigated. The Agra Canal supplies a rather larger area than wells. A drain has recently been completed from a depression near Kosī to the Tumna.

Māt Tahsīl (Mānt),—North-eastern tahsīl of Muttra District, United Provinces, conterminous with the pargana of the same name, lying between 27° 35' and 27° 58' N. and 77° 31' and 77° 50' E., with an area of 223 square miles. Population rose from \$9,451 in 1891 to 97,370 in 1901. There are 142 villages, but no town. In 1903-4 the demand for land revenue was Rs. 2,65,000, and for cesses Rs. 43,000. The density of population, 437 persons per square mile, is much below the District average. The Jumna forms the western boundary of the tahsīl, and parallel to its course lie a series of depressions marking an old bed. Nohjhīl, the most

northern of these, was formerly a lake 6 miles long by a mile broad, but it has been drained. The Moti jhil in the south, which is smaller, still contains water, and is celebrated for the number of fish caught in it. A small stream called the Patwāhā is used as a canal escape. Light and sandy soil prevails in the tahsil, which forms a long strip of land stretching along the Jumna, the valley being narrow and hadly defined. Up to 1903 canal-irrigation was confined to very few villages, and in 1903—4 only 53 square miles were irrigated (chiefly by wells), out of a cultivated area of 170 square miles. The new Māt branch of the Upper Ganges Canal now commands a considerable area.

Mahāban Tahsīl.—Central eastern tahsīl of Muttru District. United Provinces, conteminous with the parenna of the same name, lying between 27° 14' and 27° 41' N. and --77° 41' and 77° 57' E., with an area of 240 square miles. Population rose from 133,488 in 1897 to 136,506 in 1901. There are 102 villages and four towns, the largest of which is MARABAN (population, 5.523), the talist head-quarters. The demand for land revenue in 1903-4 was Rs. 2.05.000. and for cesses Rs. 52,000. The density of population, 560 persons per square mile, is slightly above the District average. On the west and south the Jumna flows in a sinuous course, bordered by a strip of sandy ravine land, I to a miles wide, of no value except as grazing-ground. East of this the land is generally fertile, but up to 1903 irrigation was entirely supplied by wells, which irrigated 47 square miles in 1903-4 out of 195 Most of the tabil is now commanded under cultivation. by the Mat branch of the Upper Ganges Canal, opened in November, 1903. Cultivation has suffered from the spread of a weed called baisuri, which flourishes in dry seasons. most important crops are jount and cotton in the autumn. and mixed barley and gram and pure wheat in the spring.

Sadābād Tahsīl.—Easternmost tahsīl of Muttra District, United Provinces, conterminous with the pargana of the same name, lying between 27° 16' and 27° 31' N. and 77° 53' and 78° 13' E., with an area of 180 square miles. Population rose from 102,103 in 1891 to 108,886 in 1901. There are 127 villages and two towns, including Sadābād (population, 4,091), the tahsīl head-quarters. The demand for land revenue in 1903–4 was Rs. 3,07,000, and for cesses Rs. 49,000. The density of population, 605 persons per square mile, is considerably above the District average. A small river, the Karon or Jhirnā, crosses the centre of the talsīl, and its

channel has been improved by the Irrigation department to serve as an escape. The Jumna just touches the south-western corner. In 1903-4 the area under cultivation was 154 square miles, of which 59 were irrigated. The latter were supplied entirely from wells; but in November, 1903, the Māt branch of the Upper Ganges Canal was opened, which commands the western half of the tahsil. Cotton is relatively a more important crop than in any other part of the District.

Baldeo,-Town in the Mahaban tahsil of Muttra District, United Provinces, situated in 27° 24' N. and 77° 49' E., on the metalled road from Muttra city to Jalesar. Population (1901), 3,367. It is generally known in the neighbourhood as Daujt, and derives its importance from a celebrated temple. A shrine was first erected in the seventeenth century, when a statue of Baldeo was found in a tank. The present temple was built late in the eighteenth century. It is of mean appearance, and is surrounded by a number of quadrangles where the resident priests and pilgrims are accommodated. The temple is in charge of a peculiar caste called Ahivāsī Brāhmans, found only in this neighbourhood. administered under Act XX of 1856, with an annual income of about Rs. 1,100. There is a primary school with about 120 pupils.

Barsāna.—Town in the Chhāta talsīl of Muttra District, United Provinces, situated in 27° 39' N. and 77° 23' E., 31 miles north-west of Muttra city. Population (1901), 3,542. According to modern Hindu belief, this was one of the favourite residences of Krishna's mistress, Rādhā. It lies at the foot and on the slope of a hill originally dedicated to Brahmā. The hill has four peaks, each crowned with buildings erected at intervals during the eighteenth and nineteenth conturies; and the importance of the place dates from the settlement here of a Brāhman who had been family priest to the Rājās of Bharatpur, Gwalior, and Indore early in the eighteenth century. In 1774 the Jāts under Sumrū were defeated near Barsāna by the imperial troops, who plundered the town. A magnificent new temple is being built by the Mahārājā of Jaipur.

Brindāban (from brindā, Ocymum sanctum, and ban, 'a grove').—Town in the District and taksīl of Muttra, United Provinces, situated in 27° 33' N. and 77° 42' E., near the Jumna, and connected by a metalled road and the branch line of the Cawnpore-Achhnerā Railway with Muttra city. Population (1901), 22,717, of whom only 1,409 are Muhammadans. The

town has no political history, but according to tradition was the place where Krishna passed most of his youth and where his mistress, Radha, loved to dwell. It is visited annually by thousands of Hindu pilgrims from the most distant parts of India. It contains about 1,000 temples, and the peacocks and monkeys with which the neighbourhood abounds enjoy special endowments. The town itself dates from the sixteenth century, when several holy men from different parts of India settled here, and four of the existing temples were built about that time. The finest of these is the temple of Govind Deva, built in 1500 by Rūjā Mān Singh of Amber (Jaipur), a magnificent building of red sandstone, enterform, with a vaulted roof. It has been restored by the British Government. The development of various Vaishnaya cults connected with the worship of Krishna has caused the growth of the place. temples were erected in the nineteenth century, one of which was built on the model of Southern Indian temples, at a cost of 45 lakhs, by the great banking firm or Seths of Mutter. Another large temple is still under construction by the Mahārājā of Jaipur. The town lies some distance from the Jumna, surrounded by sacred groves of trees, most of which contain shrines. The river face has been improved by handsome ghats of stone steps. There are branches of the Church Missionary Society and the American Methodisi Mission: and the latter society maintains a dispensary, apart from the District board dispensary.

Brindaban has been a municipality since x866. During the ten years ending 1901 the income and expenditure averaged Rs. 24,000. In 1903-4 the income was Rs. 26,000, chiefly from octroi (Rs. 19,000), and the expenditure was Rs. 28,000. There is a considerable industry in calico printing, and second-hand flaunch is largely imported from Mārwār and Bikaner to be renovated. The town, however, depends on the pilgrim traffic for its prosperity. There are two municipal and four aided schools for boys with 296 pupils in 1904, besides a small girls' school maintained by the American Methodist Mission.

Cinhata Town.—Head-quarters of the taist of the same name in Muttra District, United Provinces, situated in 27° 44' N. and 77° 31' E., on the Agra-Delhi road. Population (1901), 8,287. The principal feature of the town is its large fort-like sarai, covering an area of 12 acres, with battlemented walls and bastions, and two lofty gateways of decorated stonework, dating from the time of Sher Shah or Akbar. The interior is disfigured by a number of mean mud huts. During the Mutiny

of 1857 the sarai was occupied by the rebels, who, however, had to blow one of the towers down before they could effect an entrance. The town is administered under Act XX of 1856, with an income of about Rs. 1,200. Trade is chiefly local. There is a primary school with about 80 pupils.

Giri Rāj ('The royal hill'; called Annakūt in early Sanskrit literature).—A sandstone hill, about 4 or 5 miles long, near the town of Godardhan, in Muttra District, United Provinces, between 27° 28' and 27° 31' N. and 77° 26' and 77° 29' E. The rock rises abruptly from the alluvial plain, and runs north-east and south-west with an average elevation of 100 feet. On the north, it ends in the Mānasī Gangā tank at Gobardhan. According to Hindu fable, Indra, enraged at being deprived of his usual sacrifices, caused violent storms to pour down on the people of Braj, who were protected by Krishna by means of this hill, which he held aloft on the tip of his finger for seven days and nights. Pious pilgrims may still be seen measuring their length in the dust the whole way round it, while the hill is reckoned so holy that the main road, which crosses it at its lowest point, is carried over by a paved causeway.

Gobardhan,-Town in the talksil and District of Muttra, United Provinces, situated in 27° 30' N. and 77° 28' E., on the road from Muttra city to Dig (Bharatpur State). (1901), 6,738. It lies in a recess in the sacred hill called GIRI RAJ, and is built round a fine tank lined with masonry steps, called the Mānasī Gangā. At the Dewāli festival in autumn the steps and façade of the surrounding buildings are outlined with rows of small lamps, producing a beautiful effect. dhan is famous in tradition as one of the favourite residences of Krishna, and is also remarkable for its architectural remains. The oldest is the temple of Hari Deva, originally built about 1560 and restored by a Bania in 1872. Two stately cenotaphs of richly carved stone commemorate Randhir Singh and Baldeo Singh, Rajas of Bharatpur, and are crowned by domes, the interiors of which are adorned with curious paintings. A third cenotaph is being constructed in memory of Rājā Jaswant North of the town, on the bank of the beautiful artificial lake called Kusum Sarovar, stands a group of buildings · built in memory of Sūraj Mal by his son, Jawāhir Singh, soon aster Sūraj Mal's death near Ghāziābād in 1763. Gobardhan is administered under Act XX of 1856, with an income of about Rs. 2,200. There is little or no trade. The primary school has about 140 pupils.

Kosi.-Town in the Chhāta tahsīl of Muttra District,

٦,

United Provinces, situated in 27° 48' N. and 77° 26' E., on the Agra-Delhi road. Population (1901), 9,565. The town contains a fine sarai ascribed to Khwaja Itibar Khan, governor under Akbar. During the Mutiny the District officials took refuge at Kosi for a time, but were compelled to fice by the defection of the Bharatpur force. There is a dispensary, and the Baptist Mission has a station here. The town lies low, and is surrounded by hollows containing stagment water which had most injurious effects on the health of the inhabitants. 'A main drain has now been constructed. Kost became a municipality in 1867. During the ten years ending 1907 the income and expenditure averaged Rs. 12,000. In 1903-1 the income was Rs. 17,000, chiefly derived from octrol (Rs. 8,000) and rents (Rs. 3,000); and the expenditure was Rs. 23,000. The municipality has Rs. 10,000 invested. There is a considerable trade in the collection of grain and cotton for export to Muttra, and six cotton gins and presses employed 580 hands in 1903. Kosī is, however, chiefly known for its large cattle market, one of the most important in this part of India, where more than 30,000 head of cattle are sold annually. There are four schools with about 240 pupils.

Mahāban Town.—Head-quarters of the tahsil of the same name in Muttra District, United Provinces, situated in 27°27' N. and 77° 45' E., near the left bank of the Jumna. Population (1901), 5,523. According to tradition, Krishua spent his child-. hood at Mababan. The legend goes that his uncle Kans, a giant, knew by prophecy that his sister's son would slay him, and commanded that if she brought forth a male child it should at once be killed. The nurse, however, fled with the baby, and though the Jumna was in flood, the waters parted, and the fugitives reached Mahaban. A covered court divided into four aisles by five rows of sixteen richly decorated pillars, from which it takes its popular name of Assi Khamba, or the elighty pillars,' is said to have been the palace of Nanda, who adopted Krishna, and gave up his own female child. The building was, however, reconstructed in the time of Aurangzeb, from ancient Hindu and Buddhist materials, to serve as a mosque. architecture presents interesting features, which have been discussed by the late Mr. F. S. Growse 1. Krishna's renuted cradle, a coarse structure, covered with calico and tinsel, still stands in the pillared hall, while a dark blue image of the sacred child looks out from a canopy against the wall. The churn from which he stole his foster-mother's butter is shown, consisting of

a carved stone in which a long bamboo is placed, while a spot in the wall is shown as the place where the sportive milkmaids hid Krishna's flute. In addition to the steady stream of devotees from all parts of India, the pillared hall is resorted to by Hindu mothers from the neighbouring Districts for their purification on the sixth day after childbirth, whence the building derives its local name of the Chhatthi Pālnā, or place of the Chhatthī Pūjā, i.e. 'the sixth day of worship.'

Mahaban first emerges into history in 1018-9, when it shared the fate of the neighbouring city of Muttra, and was sacked by Mahmud of Ghazni. The Hindu prince is said, when the fall of the town became inevitable, to have solemnly slain his wife and children, and then to have committed suicide. An inscription found here records the erection of a temple in 1151 in the reign of Ajayapāla, whose dynasty is uncertain1. In 1234 a contemporary writer mentions Mahāban as one of the gatheringplaces of the imperial army sent by Shams-ud-din against Kālinjar. It is incidentally referred to by the emperor Bābar in 1526. In 1804 Jaswant Rao Holkar fled from the Doab. after his defeat at Farrukhābād, by a ford a little west of Mahāban. A mile away lies the small village of Gokul, celebrated as the residence of the founder of the Vallabhāchārya sect, and still the head-quarters of the sect. Mahāban is administered under Act XX of 1856, with an income of about Rs. 1,000. It contains a middle school with about 130 pupils, and at Gokul there is a primary school with 80 pupils.

Muttra City.—Head-quarters of the District of the same name, with cantonments, in the United Provinces, situated in 27° 30' N. and 77° 41' E., on the right bank of the Jumna, on the main road from Agra to Delhi, and on the Cawnpore-Achhnerā Railway, 886 miles from Calcutta and 914 from Bombay. A new broad-gauge line from Agra to Delhi, passing through Muttra, has recently been completed, and another towards Bombay is under construction. Population has fluctuated in the last thirty years: (1872) 59,281, (1881) 57,724, (1891) 61,195, and (1901) 60,042. In 1901 Hindus numbered 46,523, and Musalmāns 12,598.

The city of Muttra is one of the great centres of Hindu religious life, being famous as the birthplace of Krishna, who is now reverenced as the eighth incarnation of Vishnu. Its early history has been narrated in that of MUTTRA DISTRICT. Inscriptions and other relics prove that early in the Christian cra it was a great centre of Buddhism and Jainism, and in the seventh

<sup>1</sup> Epigraphia Indica, vol. ii, p. 275.

century the Chinese pilgrim still found Buddhist priests and monasteries. The Persian historians chiefly refer to it as a town to be plundered, or as a seat of idolatry with buildings to be destroyed. A town called Maharat-ul-Hind, identified as Muttra, was sacked by Mahmud of Ghazni in 1018-9. About 1500 Sultan Sikandar Lodi utterly destroyed all the shrines. temples, and images. During Akhar's reign religious tolerance led to the building of new temples; but in 1636 Shah Jahan appointed a governor to 'stamp out idolatry' in Mutira. 1660-70 Aurangzeb visited the city, changed its name to Islamābād, and destroyed many temples and shrines, building mosques on two of the finest sites. Muttra was again plundered by the Afghan cavalry of Ahmad Shah Durrani in 1757, when a growd of defenceless pilgrims were slaughtered. The town fell into British hands in 1802 and was at once occupied as a cantonment, but did not become the civil headquarters of the District till 1832. Archaeological remains of the greatest value have been discovered in and near Mutura1.

The native city lies along the Jumns, presenting a highly '. picturesque appearance from the railway bridge or the opposite bank. From the water's edge rises a continuous line of stone ghats, througed in the early morning by crowds of bathers. Fine stone houses and temples line the narrow road which passes along the ghāts; and above these are seen, tier unon tier, the flat-roofed houses of the town, which stand on ground vising up from the river bank. At the north end is the old ruined fort where was situated one of the observatories erected by Raja Man Singh of Jaipur, which has now disappeared. centre the white minarets of the lama Masjid, built in 1662, crown the picture. The main streets are wider and straighter than is usual in an Indian city, and they are paved continuously with stone flags, raised in the centre to secure good drainage. The numerous temples for which the city is noted are usually quadrangles, the walls and entrances of which are adorned with handsome stone carving and reticulated screens. The existing buildings are chiefly modern, and new temples and diarmsales or shelters for pilgrims are still being added by wealthy bankers and the rulers of Native States. West of the city stands the mosque of Aurangzeb, built about 1669, on the lofty site of the temple of Kesaya Deva, which was formerly the finest temple in Muttra and was celebrated throughout India. On the ghats towers the Satt bury or pillar commemorating the sati of a Rani of Jaipur, built about 1570. The Hardinge Gate Epigraphia Indica, vols. [ and ii; V. A. Smith, The Jain Stifes at Mathuri.

at the principal entrance to the town, which is a fine specimen of stone carving, was erected by public subscription in memory of a former Collector. South of the town and a little distance from the river lie the cantonments and civil station. Muttra is the head-quarters of the ordinary District staff and also of an Executive Engineer of the Agm Canal. Close to the District offices stands a museum faced with stone, carved in the usual manner, which contains a number of sculptures and other objects found in the District. Muttra is the chief station of the Baptist Church Missionary Society and of the Methodist Episcopal Mission in the District.

Muttra was constituted a municipality in 1866. ten years ending 1901 the income and expenditure averaged Rs. 61,000. In 1003-4 the income was Rs. 80,000, chiesly derived from octroi (Rs. 64,000); and the expenditure was Rs. 81,000. The sewage of the city is collected in tanks and carried by carts to a distance. Solid matter is trenched on the grass farm in cantonments.

While the prosperity of the town chiefly depends on its religious attractions, its commercial importance is increasing. Throughout the nineteenth century it was the head-quarters of the great banking firm of the Seths, Mani Ram and Lakshmi Chand, one of the most celebrated in India, which has now collapsed. Four cotton gins and presses employed 302 hands in 1903, and there is a considerable export of cotton and grain, while sugar, piece-goods, and metals are imported. The city is noted for the production of paper for native account-books, and also for the manufacture of brass idols and other small articles sold to pilgrims. It contains a large number of schools, including a high school with 170 pupils, a taksili school with 150, the American Methodist school with 140, besides seven schools for boys and eleven for girls, aided by the District or municipal boards, and twenty private schools and pathsalas.

The population of the cantonments in 1901 was 2,928, and the ordinary garrison consists of a regiment of British cavalry. In 1903-4 the income and expenditure of cantonment funds were both about Rs. 7,000.

Agra District.-District in the Division of the same name, Bounin the United Provinces, lying between 26° 45' and 27° 24' N. daries, configuraand 77° 26' and 78° 51' E., with an area of 1,845 square miles. tion, and It is bounded on the north by Muttra and Etah, and on the hill and east by Mainpuri and Etawah; on the south lie the Native systems. States of Gwalior and Dholpur, and on the west Bharatpur. The District is divided into four distinct tracts by the rivers

Jumpa, Utangan or Banganga, and Chambal. North-east of the Jumna, which crosses the District with a very winding course from north-west to south-east, lie two labstls with an upland area of productive loam, separated from the river by a network of ravines which are of little use except for grazing. Three smaller streams, the Thirnh (or Karon), Sirsh, and Sengar, cross this tract. The greater part of the District lies south-west of the Jumpa and north of its tributary the Utangan. This tract is remarkable for the uniformity of its soil, which is generally a fertile loam, with little clay or sand. The rayings of the two great rivers, and of the Khari Nadi, which flows into the Utangan, are the chief breaks, while in the west of Fatchpur ... Sikri a few ranges of low rocky hills appear. South of the Utangan he two smaller tracts of markedly different appearance. In the south-west a low range and numerous isolated hills are found, and the country is traversed by many watercourses. The south-east of the District consists of a long strip of land, wider in the centre than at the ends, lying between the Utangan and Jumna on the north, and the Chambal on the south. Half of this area is occupied by the deep and far-spreading ravines of the rivers.

Geology.

The District is almost entirely occupied by the Gangetic alluvium, which conceals all the older rocks, except in the west and south-west, where ridges of Upper Vindhyan sandstone rise out of the plain. Several divisions appear to be represented, from the lowest, known as the Kaimur group, to the highest, known as the Bhander. A boring at Agra was carried to a depth of 513 feet before striking the underlying rock.

Botany.

The flora is that of the Doab north of the Jumna, while south of the great river it resembles that of Rajputana. The former area is fairly well wooded, while in the latter trees are scarce.

Panna.

Leopards and hyenas are found in the ravines and in the western hills, while wolves are common near the Jumna, and 'ravine deer' (gazelle) frequent the same haunts. Antelope are to be seen in most parts of the District. Fish are plentiful in the rivers and are eaten by many classes.

Climate and temperature. Owing to its proximity to the sandy deserts on the west, Agra District is very dry, and suffers from greater extremes of temperature than the country farther east. Though cold in winter, and exceedingly hot in summer, the climate is not unhealthy. The mean annual temperature is about 75°; the lowest monthly average being about 59° in January, and the highest 95° or 96° in May and June.

The annual rainfall averages about 26 inches. There is not Rainfall, much variation in different parts, but the tract near the Jumna receives the largest fall. Great variations occur from year to year, the amount ranging from 11 to 36 inches.

The District of Agra has scarcely any history, apart from History. the city. Sikandar Lodi, king of Delhi, had a residence on the left bank of the Jumna, which became the capital of the empire about 1501. It was occupied by Babar after his victory over Ibrāhīm Khān in 1526, and its foundations are still to be seen opposite the modern Agra. Babar fought a decisive battle with the Rajputs near Fatchpur Sikri in 1527. His son. Humayun, also resided at Old Agra, until his expulsion in 1540. Akbar lived in the District for the greater part of his reign, and founded the present city of Agra on the right bank, The town of Fatehpur Sīkri, which owes its origin to the same emperor, dates from 1569 or 1570. A tank of 20 miles in circumference, which he constructed in its neighbourhood, can now be traced in the fragmentary ruins of the embankment. The mausoleum at Sikandra, 5 miles from Agra, marks the burial-place of the great Mughal emperor. It was built by his son, Jahangir, and has a fine entrance archway of red sandstone. Tahangir, however, deserted Agra towards the close of his reign, and spent the greater part of his time in the Punjab and Kābul. Shāh Jāhan removed the seat of the imperial court to Delhi, but continued the construction of the Tāi and the other architectural monuments to which the city owes much of its fame. The success of Aurangzeb's rebellion against his father was assured by the victory gained at Samogarh in this District in 1638, and the deposed emperor was then confined in the fort. From the year 1666 the District dwindled into the seat of a provincial governor, and was often attacked by the Jats. During the long decline of Mughal power, places in this District were constantly the scene of important battles. On the death of Aurangzeb his sons fought at Iaiau near the Dholpur border. Early in 1713 the fate of the Mughal empire was again decided near Agra by the victory of Farrukh Siyar over Jahandar. The importance of the District then declined; but in 1761 Agra was taken by the Jāts of Bharatpur under Suraj Mal and Walter Reinhardt, better known by his native name of Sumrū. In 1770 the Marāthās overran the whole Doab, but were expelled by the imperial forces under Najaf Khān in 1773. The Jāts then recovered Agra for a while, and were driven out in turn by Najaf Khān in the succeeding year. After passing through the usual convulsions which marked the end of the last century in Upper India, the District came into the hands of the British by the victories of Lord Lake in 1803. The city was the capital of the North-Western Provinces from 1843 until the events of 1857, and still gives its name to the Province of Agra.

The story of the outbreak of the Mutiny at Agra in May. 1857, is related under AGRA CITY. As regards the District. the talistis and thanas fell into the hands of the rebels, after the defection of the Gwalior Contingent, on June 15. July 2 the Nimach and Nasīrābād mutmeers had reached Fatchpur Sikri, and the whole District became utterly disorganized. On July 20, however, an expedition from Agra recovered that post, and another sally restored order in the Itimadpur and Firozībād parganas. The Rājā of Awa maintained tranquillity in the north, and the Raja of Bhadawar on the eastern border. But after the fall of Delhi in September the rebels from that city, joined by the bands from Central India, advanced towards Agra on October 6. Four days later Colonel Greathed's column from Delhi entered Agm without the knowledge of the mutineers, who incautiously attacked the city and hopelessly shattered themselves against his well-tried force. They were put to flight easily and all their guns taken. The rebels still occupied Fatehpur Sikri, but a column dispatched against that place successfully dislodged them. November 20 the villages remaining in open rebellion were stormed and carried; and on February 4, 1858, the last man still under arms was driven out of the District.

Archaeology. Fragments of Hindu buildings have been discovered at a few places, but none of any importance, and the archaeological remains of the District are chiefly those of the Mughal period. Among these must be mentioned the magnificent fort, with the buildings contained in it, and the beautiful Tāj at Agra; the tomb of Akbar at Sikandra; the buildings near Agra on the opposite bank of the river; and Akbar's city at Fatehpur Sīkri. The preservation and restoration of these splendid memorials has been undertaken by Government, and large sums have been spent, especially in recent years.

The prople.

The District contains 1,197 villages and 9 towns. The population fell considerably between 1872 and 1881 owing to famine, and has not yet recovered its former level. The number at the last four enumerations was: (1872) 1,076,005, (1881) 974,656, (1891) 1,003,796, and (1901) 1,060,528. The District is divided into seven tahsils—ITIMĀDPUR, FĪROZĀBĀD, BĀH, FATCHĀBĀD, AGRA, KIRAOLĪ, and KHAIRĀGARH—the

head-quarters of each being at a place of the same name. The principal towns are the municipalities of Agra, the administrative head-quarters of the District, and Firozanan, and the 'notified area' of FATEHPUR SIRRI. The following table gives the chief statistics of population in 1901:-

Tańsif.	Arca in square miles.	Towns 2	Villages.	Populatien.	Population per equate mile.	Percentage of variation in population be- tween 1841 and 1901.	Number of persons able to read and verice.
Himādpur . Fīrozābād . Bāh . Fatehābād . Agta . Kimoli . Khairāgarh .	277 203 341 241 205 372 309	1 1 1 2 1	180 186 204 161 140 171	159,881 119,775 128,591 114,733 291,044 123,812 127,692	574 590 362 476 1,441 455 413	+ 4.0 + 6.8 - 1.9 + 5.8 + 6.7 + 15.7 + 3.1	4,333 3,324 3,824 3,824 2,897 21,409 3,605 2,911
District total	1,845	9	1,197	1,010,528	575	+ 5-6	42,303

Hindus form 86 per cent. of the total, and Musalmans 12 per cent, while the followers of other religions include 12,953 Jains, 5,522 Christians, and 2,354 Aryas. The density is above the Provincial average, and the rate of increase between 1891 and 1901 was also high. More than 99 per cent. of the population speak Western Hindl, the prevailing dialect being Brai.

The most numerous caste is that of Chamiles (leather-workers Castes and labourers), 175,000. Next come Brahmans, 110,000; and occu-Rājputs, 89,000; Jāts, 69,000; Baniās, 65,000; Kāchhīs (cultivators), 53,000; and Koris (weavers), 32,000. (shepherds), Ahīrs (cowherds), Gujars (graziers), Lodhas (cultivators), and Mallahs (boatmen and fishermen), each number from 30,000 to 20,000. More than a quarter of the Musalmans call themselves Shaikhs, but most of these are descended from converts. Pathans number 11,000; and Bhishus (water-carriers), Saivids (converted Rajputs), Bhangis (sweepers), and Fakirs number from 8,000 to 6,000. About 48 per cent, of the population are supported by agriculture, 10 per cent. by general labour, and 8 per cent. by personal services. Rājputs, Brāhmans, Baniās, Jāts, and Kāyasths are the principal landholders, and Brahmans, Rajputs, Jats, and Chamars the principal cultivators.

Out of 2,343 native Christians in 1901, 1,158 were Metho-Christian dists, 774 Anglicans, and 346 Roman Catholics. The Roman missions.

Catholic Mission has been maintained continuously since the sixteenth century, while the Church Missionary Society commenced work in 1813 and the American Methodist Mission in 1881.

General agricultural conditions. The quality of the soil is generally uniform, and the relative facility of irrigation is the most important agricultural factor. Along the rivers there is usually a rich tract of low alluvial soil called kachhār; but the area is very small, except on the bank of the Chambal. On the Gwalior border is found a black soil resembling the mār of Bundekhand and called by the same name. In the tract north of the Jumna there has been some deterioration owing to the spread of the weed baituri (Pluchea lancolata), which is yet more common in Muttra District. The west of the District is subject to considerable fluctuations, owing to excessive or deficient rainfall, and was formerly ravaged by wild cattle from Bharatpur, which are now kept out by a fence and ditch made in 1893.

Chief agricultural statistics and prancipal crops.

The tenures found in the District are those common elsewhere. Zamindāri mahāls number 2,111, perfect fatlīdāri 1,824, and imperfect fatlīdāri 1,668. The last mentioned also include bhalyāchārā or, as they are called here, kabzadāri mahāls. There are a few talukdāri estates, but none of importance. The main agricultural statistics for 1903-4 are given below, in square miles:—

Tahşil	,		Total.	Cultivated.	Irrigated.	Cultivable waste
Itimādpur			277	205	75	25
Fīrozābād		. ]	303	141	бо	13
Bāh .			341	190	13	25
Fatchabad			241	169	бo	rg '
Agra .		٠.	301	151	ნი	23
Kimoli .		. 1	272	210	67	36
Khanāgarh	•	-	300	300	84	55
	Tot	nl	618,1	1,272	<b>368</b>	194

The staple food-crops, and the areas under each in 1903-4, were: būjra (283 square miles), gram (237), jowār (179), wheat (176), and barley (192). Cotton covered 118 square miles, being grown in all parts of the District.

Improvements in agricultural practice. There have been no improvements in agricultural practice of recent years. Since the last settlement, despite a slight increase in canal-irrigation, cultivation has fallen off. A steady demand exists for advances under the Land Improvement and Agriculturists' Loans Acts, which amounted to more than a

Kailways

Agra is well supplied with railways. The East Indian Railand roads, way passes through the tract north of the Jumpa, and is connected by a branch from Tundla to Agra city with the Midland section of the Great Indian Peninsula Railway. The narrow-gauge Raiputana-Malwa line runs west from Agra, and a branch from this at Achhnera joins Muttra and Hathras. A new broad-gauge line from Agra to Delhi has recently been completed. The total length of metalled roads is 177 miles. of which 70 are maintained at the cost of Provincial revenues, while the remainder and also 434 miles of unmetalled roads are maintained from Local funds. Avenues of trees are kept up on 232 miles. An old imperial route ' from Delhi to the east passed through Agra, and other roads lead towards Bombay through Dholpur, to Raiputana, and to the Doab.

Famine.

The District has suffered much in periods of drought, and famines occurred in 1783, in 1813, in 1810, and in 1838. In . the last-named year as many as 113,000 paupers were relieved in Agra city alone, while 300,000 starving people immigrated into the District. In 1860-1 the District was again visited by severe scarcity, though it did not suffer so greatly as the country immediately to the north. In July, 1861, the daily average of persons on relief works rose to 66,000. Distress was felt in 1868-9, but did not deepen into famine. In 1877-8 the failure of the autumn crops following high prices in the previous year caused famine, and relief works were opened on the Achlinera-Muttra Railway and on the roads, the highest number employed at one time being 28,000. The last famine was in 1896-7, when distress was felt throughout the District, and most severely in the Bah and Khairagath talisits, which are not protected by canals and have exceptionally poor means of irrigation. The labouring classes were the chief sufferers, and the number on relief rose to 33,000, but many of these were the wives and children of persons employed in the city who added to the family income by working on the new park at Agra.

District PLAII.

The District staff includes, besides the Collector, one or two members of the Indian Civil Service and five Deputy Collectors recruited in India. A tahsildar resides at the head-quarters of each of the seven taksils.

Civil

There are two District Munsifs and a Judge of the Small justice and Cause Court. The Subordinate Judge and the District and Sessions Judge have jurisdiction throughout the two Districts of Agra and Muttra. Serious crime is not uncommon, and

the District is noted for the large number of robberies and dacoities which occasionally take place. Cattle-thefts are also frequent, and the difficulty in detecting these offences is enhanced by the proximity of the borders of Native States. Infanticide was formerly prevalent, and the inhabitants of a few villages are still proclaimed and kept under observation.

After the acquisition of the District in 1803, settlements Land were made for short terms, the demand being fixed on a consideration of the offers made by persons for whole parganas ; tration. but after the first year or two the demand was distributed over individual villages. The Bah tahsil was, however, farmed for some time. The first regular settlement was completed between 1834 and 1841, on the basis of a professional survey. Soils were classified and rent rates applied, which were derived by selection from actual rates; and the revenue was fixed at two-thirds of the 'assets' so calculated, but the estimates were also checked by comparison with the earlier assessments. The revenue demand amounted to 16.2 lakhs. In 1872 a revision was commenced. The valuation was based, as before, on rent rates actually paid; but several difficulties arose in fixing standard rates. Rents were usually paid in the lump, without any differentiation for different classes of soil. One-quarter of the cultivation was in the hands of the landlords, and in half the area rents had remained unchanged since the last settlement. The 'assets' calculated were revised by a comparison with the actual rent-rolls, but the assessment provided for prospective increases. The revenue fixed amounted to 78 lakhs, representing 50 per cent. of the 'assets'; the incidence fell at Rs. 1-7 per acre, varying from Rs. 1-1 in Bah to Rs. 2 in the Itimadpur talsil. Extensive reductions of revenue were made in 1886 and 1891 in the Agra and Kiraoli talisits, owing to deterioration and a high assessment, but these tracts are now recovering. In 1903 it was decided that the settlement, which would ordinarily expire in 1907-9, should be extended for a further period of ten years. The receipts from land revenue and all sources have been, in thousands of runees:-

citac mia mi sources i	ido tala ali sotticos tare occis ai diousiasis di tapeta i-							
	1880-1.	1800-1.	1900-1.	1903-4.				
Land revenue	17,84 23,78	17,40	17,78	17,55 28.34				

Besides the two municipalities of Agra and Firozarab, and Local selfthe 'notified area' of FATEHPUR SIRRI, there are six towns governadministered under Act XX of 1856. The income and expen-

diture of the District board is about 1.5 lakhs. The income is chiefly derived from rates, and nearly half the expenditure is on roads and buildings.

Police and jails.

The District Superintendent of police usually has 2 Assistant Superintendents and 9 inspectors working under him, and in 1904 he had a force of 158 subordinate officers and \$40 men. There are also about 90 municipal and town police, and 2,300 rural and road police. The District contains thirty-three police stations, and a District and also a Central jail.

Education.

Agra takes a fairly high place in the United Provinces as regards literacy. At the Census of 1901, 4 per cent. of the people (7 males and 0.5 females) were returned as able to read and write. The number of schools recognized as public fell from 245 in 1880-1 to 192 in 1900-1, but the number of pupils rose from 7,683 to 9,322. In 1903-4 there were 266 public institutions with 13,911 pupils, of whom 1,513 were girls, besides 102 private schools with 2,099 pupils. Of the public institutions, five are managed by Government, and the rest chiefly by the District and municipal brands. There are three Arts colleges in Agra City, in two of which law classes are held, and also a normal school and a medical school. Out of a total expenditure on education in 1903-4 of 2.4 lakhs, Rs. 67,000 was received from fees.

Hospitals and despensaries.

The District contains 16 hospitals and dispensaries, with accommodation for 333 in-patients. In 1903 the number of cases treated was 178,000, of whom 5,000 were in-patients, and 8,000 operations were performed. The expenditure amounted to Rs. 58,000, chiefly from Local and municipal funds. The Thomason Hospital is one of the finest in the United Provinces.

Vaccion-

About 35,000 persons were vaccinated in 1903-4, representing 33 per 1,000 of the population. Vaccination is compulsory only in the municipalities and the cantonment.

[H. F. Evans, Settlement Report (1880); H. R. Nevill, District Gatetteer (1905).]

Itimādpur Tahsil.—Northern tahsīl of Agra District, United Provinces, conterminous with the pargana of the same name, lying between 27° 5' and 27° 24' N. and 77° 58' and 78° 22' E., with an area of 277 square miles. It was formerly known as Khandauli. Population increased from 153,761 in 1891 to 159,881 in 1901. There are 180 villages and two towns, ITIMĀDPUR (population, 5.322), the tahsīl head-quarters, and Tündla (3,044). The demand for land revenue in 1903-4

was Rs. 3,10,000, and for cesses Rs. 38,000. The density of population, 574 persons per square mile, is about the same as the District average. The takat lies entirely north of the Jumna, and is crossed by the small river Jhimā or Karon. Most of it forms a level upland of uniformly rich loam; but a network of ravines spreads inland from the Jumna and Jhimā, which are harren and only of use for grazing. Bordering on the river beds lies a small tract of alluvial soil, which often deteriorates to sand, capable of producing only melons. In 1903-4 the area under cultivation was 205 square miles, of which 75 were irrigated, almost entirely from wells.

Firozābād Tahsil.—North-eastern tahsil of Agra District. United Provinces, conterminous with the fargana of the same name, lying between 26° 59' and 27° 22' N. and 78° 19' and 78° 32' E., with an area of 203 square miles. Population increased from 112,153 in 1891 to 119,775 in 1901. There are 186 villages and one town, Firozaban (population, 16,849), the tohsil head-quarters. The demand for land revenue in 1903-4 was Rs. 2,25,000, and for cesses Rs. 27,000. The density of population, 590 persons per square mile, is slightly above the District average. The tahsil lies north of the Jumna, and is crossed by two small streams, the Sirsa and Sengar. About one-sixth of the total area consists of the Jumna ravines, which produce only thatching-grass and a little stunted timber. The rest is a fertile tract of upland soil, with a few patches of usar, dhak jungle (Butea frondosa), and here and there sandy ridges. In 1903-4 the area under cultivation was 141 square miles, of which 60 were irrigated. Wells supply over go per cent. of the irrigated area, and the Upper Ganges Canal serves about 5 square miles.

Bah.—South-eastern tahsil of Agra District, United Provinces, conterminous with the pargana of the same name, lying between 26° 45' and 26° 59' N. and 78° 12' and 78° 51' E., with an area of 341 square miles. The tahsil is sometimes called Pināhat. Population decreased from 125,848 in 1891 to 123,591 in 1901. There are 204 villages and one town, Bāh (population, 3,867), the tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 2,09.000, and for cesses Rs. 28,000. The density of population, 362 persons per square mile, is the lowest in the District. The tahsil is almost an island, being cut off from the rest of the District by the Utangan and Jumna on the north, and from the Gwalior State by the Chambal on the south. While the average breadth between these rivers is 8 or 9 miles, the wild maze of deep ravines

which fringes them reduces the comparatively level central tract to a width of 4 or 5 miles. The villages in this area are perched on almost inaccessible positions—a memorial of the time when security was required against the revenue collector and foreign invaders. While the actual ravines are totally barren, and do not produce even trees, the low-lying land, here called Lackhar, is exceptionally fertile. This is especially the case near the Chambal, where black soil, called mar as in Bundelkhand, is common. The Utangan kachhar, though of different composition, is equally fertile, while the Jumna lowlands are poorer. In 1003-4 the area under cultivation was 100 square miles, of which only 12 were irrigated, almost entirely from wells. The great depth of spring-level and the cost of irrigation make this tract peculiarly liable to distress in dry seasons, and it was the only taket in the District which lost in population between 1891 and 1901.

Fatehābād.—South central talisīl of Agra District, United Provinces, conterminous with the pargana of the same name, lying between 26° 56' and 27° 8' N. and 77° 55' and 78° 26' E., with an area of 241 square miles. The talist is bounded on the north-east by the Jumna, on the south by the Utangan, and on the west by the Khārī Nadī. Population increased from 103,446 in 1891 to 114,733 in 1901. There are 161 villages and one town, Fatchabad (population, 4,673), the talist/ head-quarters. The demand for land revenue in 1903-4 was Rs. 2,51,000, and for cesses Rs. 30,000. A considerable area is occupied by the ravines of the Jumna and Utangan; but most of the tahsil is an upland tract of average fertility in which well-irrigation is easy, while the Agra Canal passes through it. There are two main depressions, one of which was probably an old bed of the Jumna. In 1903-4 the area under cultivation was 160 square miles, of which 60 were irrigated. The Agra Canal serves about one-quarter of the irrigated area, but wells are the most important source of supply.

Agra Tahsil.—North central tahsil of Agra District, United Provinces, conterminous with the parguna of the same name, lying between 27° 3' and 27° 17' N. and 77° 51' and 78° 13' E., with an area of 202 square miles. Population increased from 272,718 in 1891 to 291,044 in 1901. There are 140 villages and one town, Agra City (population, 188,022), the District and tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 2,24,000, and for cesses Rs. 30,000. The density of population, 1,441 persons per square mile, is more

than double the District average, owing to the inclusion of the city. On the north and east the Jumna forms the boundary, bordered by a fringe of ravines, usually extending a mile from the river. The ravines, though barren, produce valuable grass used for making thatch and rope, and also form grazing-grounds. In the lowlands near the river melons and other vegetables are grown. The greater part of the tabstl is a level upland, with a well-marked depression in the west. In 1903-4 the area under cultivation was 151 square miles, of which 60 were irrigated. The Agra Canal supplies about one-third of the irrigated area, and wells serve most of the remainder. In a few places the subsoil water is brackish.

Kiraoli.—North-western tahsil of Agra District, United Provinces, conterminous with the pargana of Fatehour Sikri. lying between 27° o' and 27° 17' N. and 77° 30' and 77° 55' E., with an area of 272 square miles. Population increased from 106,077 in 1801 to 122,812 in 1901. There are 171 villages and two towns. FATEUPUR SIKRI (population, 7,1.17) and ACHINERA (5,375). The demand for land revenue in 1903-4 was Rs. 2,51,000, and for cesses Rs. 31,000. The density of population, 455 persons per square mile, is below the District average. The Utangan flows close to the southern border. while the Khārī Nadī crosses the centre. The eastern portion is level, but in the western half there are hills, the most important being the range on which the town of Fatehpur Sikri stands. A much shorter and lower range of hills runs parallel to this, north of the Khari Nadi. Both ranges consist of red sandstone. The area under cultivation in 1903-4 was 210 square miles, of which 67 were irrigated. About onethird of the irrigated area is served by the Agra Canal, and extensions are contemplated. Wells supply the rest, but in many parts the water is so brackish that without good rains it cannot be used.

Khairāgarh.—South-western tahsīl of Agra District, United Provinces, conteminous with the pargana of the same name, lying between 26° 45' and 27° 4' N. and 77° 26' and 78° 7' E. with an area of 309 square miles. Population increased from 123,893 in 1891 to 127,692 in 1901. There are 155 villages and one town, Jagnair (population, 4.051). Khairāgarh, the tahsīl head-quarters, is a small village. The demand for land revenue in 1903-4 was Rs. 2,85,000, and for cesses Rs. 35,000. The density of population, 413 persons per square mile, is much below the District average. The tahsīl is divided into two portions by the Utangan. The tract south-west of this

river is a spur of British territory almost surrounded by the Native States of Bharatpur and Dholpur, with a range of the Vindhyas along the northern boundary and isolated hills scattered farther south. These hills are of red sandstone, which is valuable for building purposes. Near the hills the soil is sandy, but after passing a tract of infertile clay a richer soil is reached. East of the Utangan the ordinary loam is found, stretching up to the ravines of the Khārī Nadī, which forms the castern boundary of the tahsil and is bordered by deep and precipitous ravines. There is no canal-irrigation, and in 1903-4 the irrigated area was only 34 square miles out of 256 under cultivation. Wells are the sole source of supply, but owing to the faulty sub-strata they cannot be made in many places.

Achhnerā.—Town in the Kiraoli tahsīl of Agm District, United Provinces, situated in 27° 10' N. and 77° 46' E., on the road from Agra city to Rājputāna, and at the junction of the Rājputāna-Mālwā and Cawnpore-Achhnerā Railways. Population (1901), 5,375. The place first became of importance under the Jāts in the eighteenth century, and a British tahsīl was situated here from 1803 to 1832. It then declined, but has again prospered since it became a railway junction. Achhnerā is administered under Act XX of 1856, with an income of about Rs. 1,200. The trade is largely local, but there is a cotton gin which employed 130 hands in 1903. The town contains a primary school with 85 pupils.

Situation.

Agra City.—Administrative head quarters of Agra District, United Provinces, situated in 27° 10′ N. and 78° 3′ E., on the right bank of the river Jumna, 843 miles by rail from Calcutta and 839 miles from Bombay. The city is the fourth in size in the United Provinces and is growing rapidly in population. The number of inhabitants at the four enumerations was as follows: (1872) 149,008, (1881) 160,203, (1891) 168,622, and (1901) 188,022. The figures include the population of the cantonments, which amounted to 22,041 in 1901. Hindus numbered 121,240, and Musalmans 57,760.

History.

Before the time of Akbar Agra had been a residence of the Lodi kings, whose city, however, lay on the left or eastern bank of the Jumna. Traces of its foundations may still be noticed opposite the modern town, and a flourishing suburb has grown up on part of the ancient site. Bābar occupied the old palace after his victory over Ibrāhīm Khān in 1526; and when a year later he defeated the Rājput forces near Fatchpur Sīkri and securely established the Mughal supremacy, he took up his permanent residence at this place. He died at Agra in

1530; but his remains were removed to Kābul, so that no mausoleum preserves his memory here. His son, Humāyūn, was for a time driven out of the Ganges valler by Sher Shah, the Afghan governor of Bengul, and after his re-establishment on the throne he fixed his court at Delhi. Humilyun was succreded by his son Akbar, the great organizer of the imperial system, who removed the seat of government to the present Agm, which he founded on the right bank of the river, and built the fort in 1566. A second name of the city, Akbarabad, is still used by natives. Four years later he laid the foundations of Fatchpur Sikri, and contemplated making that town the capital of his empire, but was dissuaded apparently by the superior situation of Agra on the great waterway of the Jumna. From 1570 to 1600 Akbar was occupied with his conquests to the south and east; but in 1601 he rested from his wars and returned to Agra, where he died four years later. During his reign the palaces in the fort were commenced, and the cates of Chitor were set up at Agra. Jahangir built his father's mausoleum at Sikandra, and also erected the tomb of his father-in-law, Itimad-ud-daula, on the left bank of the river, as well as the portion of the palace in the fort known as the Jahangir Mahal. In 1618 he left Agra and never returned. Shah Jahan was proclaimed emperor at Agra in 1628, and resided here from 1632 to 1637. It is to his reign that most of the great architectural works in the fort must be referred, though doubtless many of them had been commenced at an earlier date. The Mott Masiid or pearl mosque, the Jama Masjid or great mosque, and the Khās Mahal were all completed under this magnificent emperor. The Tai Mahal. generally allowed to be the most exquisite piece of Muhammadan architecture in the world, commemorates his wife, Mumtaz Mahal. In 1658 Shah Jahan's third son, Aurangzeb, rebelled and deposed him; but the ex-emperor was permitted to live in imperial state at Agm, though in confinement, until his death seven years later. Agra then sank for a while to the position of a provincial city, as Aurangzeb removed the seat of government permanently to Delhi. It had often to resist the attacks of the turbulent Jats during the decline of the Mughals; and in 1761 it was actually taken by the Bharatpur forces under Suraj Mal and Walter Reinhardt, better known by his native name of Sumru. In 1770 the Marathus ousted the lats, but were themselves driven out by the imperial troops under Najaf Khān four years later. Najaf Khān then resided in the city for many years with great state as imperial minister.

After his death in 1770 Muhammad Bug was governor of Agra; and in 1784 he was besieged by the forces of the emperor Shah Alam and Mahadji Sindhia. Sindhia took Agra, and held it till 1787, when he was in turn attacked by the imperial troops under Ghulam Kādir and Ismail Beg. The partisan, General De Boigne, raised the siege by defeating them near Fatchpur Sikri in June, 1788. Thenceforward the Manathās held the fort till it was taken by Lord Lake in October, 1803. From this time it remained a British frontier fortiess; and in 1835, when the new Presidency of Agra was founded, this city was chosen as the seat of government, though the Board of Revenue and the principal courts remained at Allahābād till 1843, when they were moved to Agra.

British rule continued undisturbed until the Mutiny in 1857. News of the outbreak at Meetat reached Agra on May 11, and the fidelity of the native soldiers at once became suspected. On May 30 two companies of Native Infantry belonging to the 44th and 67th Regiments, who had been dispatched to Muttra to escort the treasure into Agra, proved mutinous and marched off to Delhi. Next morning their comrades were ordered to pile arms, and sullenly obeyed. Most of them then quickly retired to their own homes. The mutiny at Gwalior took place on June 15, and it became apparent immediately that the Gwalior Contingent at Agra would follow the example of their comrades. On July 3 the Butish officials found it necessary to retire into the fort. Two days later the Nimach and Nasīrābād rebels advanced towards Agra, and drove back the small British force at Sucheta after a brisk engagement. The mob of Agra rose at once, plandered the city, and murdered every Christian, European or native, upon whom they could lay their hands. The mutineers, however, moved on to Delhi without entering the city; and on July 8 partial order was restored in Agrathe months of July and August the officials remained shut up in the fort, though occasional raids were unde against the rebels in different directions. The Lieutenant-Governor of the North-Western Provinces (John Colvin) died during those months of trouble, and his tomb now forms a graceful specimen of Christian sculpture within the fort of the Mughals After the fall of Delhi in September, the fugitives from that city, together with the rebels from Central India, unexpectedly advanced against Agra on October 6. Meanwhile, Colonel Greathed's column from Delhi had entered the city without the knowledge of the mutineers. Neither force knew of the presence of the other till the attack took place, but the rebels were repulsed after a short contest, which completely broke up their army. Agra was henceforth relieved from all danger. and the work of reconstituting the District went on unmulested. The provisional Government continued to occupy the former capital until February, 1858, when it removed to Allahabad. which was considered a superior military position. Since that time Agra has become for administrative purposes merely the head-quarters of a Division and a District. But the ancient capital still maintains its natural supremacy as the finest city of Upper India, while the development of the railway system, of which it forms a great centre, is gradually resturing its commercial importance.

The city of Agra stretches inland west and south from the Descrip-Jumna, forming a roughly equilateral triangle, with its base tionrunning west from the river. The cantonments lie beyond the southern point, and include a large rectangular area. Most of the civil station is surrounded by portions of the native city, but the Judge's court and the jails lie north of it. are better built than those of most towns in the Provinces, and contain a large proportion of stone houses. The Mughal buildings for which the place is famous lie on the edge of the city or some distance away. The Jama Masjid or great mosque stands at the centre of the south-eastern face, separated from the river by the vast pile of buildings included in the fort. From the north angle of the fort the Jumna curves away to the east, and on its bank at a distance of a mile and a half rises the levely marble building famous as the Taj. The space between, which was formerly an unsightly stretch of ravines, is now occupied by the MacDonnell Park, commenced as a famine work in 1897, which occupies about 250 acres. The tomb of Itimad-ud-daula and the Chini-ka-rauza are situated on the left bank of the river; and the magnificent tomb of Akbar is at Sikandra, 5 miles north-west of the city.

The main building of the Jama Masjid, 130 feet in length by The Jama 100 in breadth, is divided into three compartments, each of Masjid. which opens on the courtyard by a fine archway, and is surmounted by a low dome built of white and red stone in oblique courses, producing a singular, though not ampleasing, effect. The work has all the originality and vigour of the early Mughal style, mixed with many reminiscences of the Pathan school. The inscription over the main archway sets forth that the mosque was constructed by the emperor Shah Jahan in 1644, after five years' labour. It was built in the name of his

daughter, Jahānārā, who afterwards devotedly shared her father's captivity when he had been deposed by Aurangzeh. This is the noble-hearted and pious princess whose modest tomb lies near that of the poet Khusrū, outside Delhi.

The fort.

Opposite to the Jama Masjid, across an open square, stands the fort, whose walls are 70 feet high and a mile and a half in circuit; but as they are only faced with stone and consist within of sand and rubble, they have no real strength, and would crumble at once before the fire of modern artillery. A drawbridge leads across the deep moat which surrounds the crenelated ramparts, giving access through a massive gateway and up a paved ascent to the inner portal. The actual entrance is flanked by two octagonal towers of red sandstone, inlaid with ornamental designs in white marble. The passage between them, covered by two domes, is known as the Delhi Gate. Within it, beyond a bare space once occupied by a courtyard, lie the palace buildings, the first of which is the Diwan-i-am, or hall of public audience, formerly used as an armoury. It was built by Aurangzeb in 1685, and did duty as an imperial hall and courthouse for the palace. The roof is supported by colonnades which somewhat impair the effect of the interior. This hall opens on a large court or tilt-yard; and while the emperor with his grandees sat in the open hall, the general public occupied three of the cloisters. A raised throne accommodated the sovereign, behind which a door communicated with the private apartments of the palace. The main range of buildings does not belong to Akbar's time, but was built by his son and grandson. The centre consists of a great court 500 feet by 370, surrounded by arcades and approached at opposite ends through a succession of corridors opening into one another. The Ulwan-i-am is on one side, and behind it are two smaller enclosures, the one containing the Diwan-i-khas and the other the harem. Three sides were occupied by the residences of the ladies, and the fourth by three white pavilions. The Diwan-i-khās, or hall of private audience, consists of two corridors, 64 feet long, 34 feet broad, and 22 feet high, both built in 1637. It has been repaired in a spirit of fidelity to the The Machchhi Bhawan, or court between these and the Diwan-i-am, was probably built by Shah Jahan. On the river side of this court are two thrones, one of white marble and the other of black slate. The substructures of the palace are of red sandstone; but the corridors, rooms, and pavilions me of white marble elaborately carved. Next to the Diwan-i-klias comes the Shish Mahal or palace of glass, which was an

Oriental bath adorned with thousands of small mirrors. To the south again lies a large red building called the Jahangir Mahal. with a fine two-storeyed façade and relieving lines of white marble. One of the inner courts is 70 feet square, and both are of red stone; between them is a handsome entrance on pillars. The Jahangir Mahal presents some admirable examples of Hindu carving, with projecting brackets as supports to the broad eaves and to the architraves between the pillars, which take the place of arches. This Hindu form is adopted in the Jahangir Mahal and in the neighbouring Saman Burj instead of the arch; and the ornamentation of the former is purely Hindu. The exquisite Mott Masjid, or pearl mosque, stands to the north of the Diwan-lam. It is raised on a lofty sandstone platform, and has three domes of white marble with gilded spires. The domes crown a corridor open towards the court and divided into three aisles by a triple row of Samcenic arches. The pearl mesque is raz feet long by 56 feet high. and was built by Shāh Jahān in 1654. It is much larger than the pearl mosque at Delhi; and its pure white marble, sparingly inlaid with black lines, has an effect at once noble and refined. Only in the slabs composing the floor is colour employed—a delicate yellow inlaid into the white marble. There is, however, in the Agra fort a second and much smaller pearl mosque, which was reserved for the private devotions of the emperor. This exquisite miniature house of prayer is entirely of the finest and whitest marble, without gilding or inlaying of any sort.

The Taj Mahal, with its beautiful domes, 'a dream in marble,' The Taj. rises on the river bank. It is reached from the fort by the Strand Road made in the famine of 1838, and adorned with stone ghats by native gentlemen. The Taj was erected as a mausoleum for the remains of Arimand Band Begam, wife of the emperor Shāh Jahān, and known as Mumtāz Mahal or 'exalted of the palace.' She died in 1629, and this building was begun soon after her death, though not completed till 1648. The materials are white marbles from Alakrana and red sandstone from Fatehpur Sikri. The complexity of its design and the delicate intricacy of the workmanship baffle description. The mausoleum stands on a raised marble platform, and at each of the corners rises a tall and slender minaret of graceful proportions and exquisite beauty. Beyond the platform stretch the two wings, one of which is itself a mosque of great architectural merit. In the centre of the whole design, the mausoleum occupies a square of 186 feet, with the angles

deeply truncated, so as to form an unequal octagon. The main feature of this central pile is the great dome, which swells upward to nearly two-thirds of a sphere, and taners at its extremity into a pointed spire, crowned by a crescent. Each corner of the mausoleum is covered by a similar though much smaller dome, crected on a pediment pierced with graceful Saracenic arches. Light is admitted into the interior through a double screen of pierced marble, which tempers the glare of an Indian sky, while its whiteness prevents the mellow effect from degenerating into gloom. The internal decorations consist of inlaid work in precious stones, such as agate and jasper, with which every spandril or other salient point in the architecture is richly fretted. Brown and violet marble is also freely employed in wreaths, scrolls, and lintels, to relieve the monutony of the white walls. In regard to colour and design the interior of the Taj may rank first in the world for purely decorative workmanship; while the perfect symmetry of its exterior, once seen, can never be forgotten, nor the serial grace of its domes, rising like marble bubbles into the clear sky.

The Taj represents the most highly elaborated stage of ornamentation reached by the Indo-Muhammadan buildersthe stage at which the architect ends and the Jeweller begins. In its magnificent gateway the diagonal ornamentation at the corners which satisfied the designers of the gateways of the Itimād-ud-daula and Sikandra mausoleums is superseded by fine marble cables, in hold twists, strong and handsome. The triangular insertions of white marble and large flowers have in like manner given place to a fine inlaid work. Firm perpendicular lines in black marble, with well-proportioned quantits of the same material, are effectively used in the interior of the gateway. On its top, the Hindy brackets and monolithic architraves of Sikandra are replaced by Moorish cusped arches, usually single blocks of red sandstone in the kiosks and pavilions which adorn the roof. From the pillared pavilions a magnificent view is obtained of the Taj gardens below, with the Jumna at their farther end, and the city and fort of Agra in the distance.

From this splendid gateway one passes up a straight alley, through a beautiful garden cooled by a broad shallow piece of water running along the middle of the path, to the Tāj itself. The Tāj is entirely of marble and gems. The red sandstone of other Muhammadan buildings has disappeared; or rather the red sandstone, where used to form the thickness of the walls, is in the Tāj overlaid completely with white marble,

and the white marble is itself inlaid with precious stones arranged in lovely patterns of flowers. A feeling of purity impresses itself on the eye and the mind, from the absence of the coarser material which forms so invariable a feature of Agra architecture. The lower walls and panels are covered with tulips, oleanders, and full-blown lilies, in flat carving on the white marble; and although the inlaid work of flowers, done in gents, is very brilliant when looked at closely, there is on the whole but little colour, and the all-prevailing sentiment is one of whiteness, silence, and calm. The whiteness is broken only by the fine colour of the inlaid gems, by lines in black marble and by delicately written inscriptions, also in black, from the Koran. Under the dome of the vast mausoleum a high and beautiful screen of open tracery in white marble rises round the two tombs, or rather cenotaphs', of the emperor and his princess; and in this marvel of marble, the carving has advanced from the old geometric patterns to a trelliswork of flowers and folinge, handled with great freedom and spirit. The two cenotaphs in the centre of the exquisite enclosure have no carving, except the plain kalamdan, or oblong pen-box, on the tomb of Shah Jahan. But both the conotaphs are inlaid with flowers made of costly gems, and with the ever-emceful oleander scroll.

The tomb of Itimad-ud-daula stands some distance from the Tamb of opposite or left bank of the river. Itimad-ud-daula was the Itimad-Wazīr or prime minister of the emperor Jahangīr, and his ud-daula. mausoleum forms one of the treasures of Indian architecture. The great gateway is constructed of red sandstone, inlaid with white murble, and freely employing an ornamentation of diagonal lines, which produce a somewhat unrestful Hyzantine effect. The mausoleum itself in the garden looks from the gateway like a structure of marble filigree. It consists of two storeys. The lower one is of marble, inlaid on the outside with coloured stones chiefly in geometrical patterns, diagonals, cubes, and stars. The numerous niches in the walls are decorated with enamelled paintings of vases and flowers. The principal entrance to the mausoleum is a marble arch, grained, and very finely carved with flowers in low relief. In the interior, painting or enamel is freely used for the roof and the dado of the walls; the latter is about 31 feet high, of fine white marble inlaid with coloured stones in geometrical patterns. The upper storey consists of pillars of white marble (also inlaid with coloured stones), and a series of perforated

1 The real tombs are in a vault below.

marble screens stretching from pillar to pillar. The whole forms a lovely example of marble open filigree work.

Imblic muldings, &c.

In addition to the ordinary District offices, Agra contains some fine public buildings. Among these may be mentioned the three colleges, the Roman Catholic Cathedral and the Mission buildings, the Thomason Hospital, now one of the best equipped in the United Provinces, and the Lady Lyall Hospital, the Central and District inils, and the Lungtic Asylum. Agra is the head-quarters of the Commissioner of the Division, the Commissioner of Salt Revenue in Northern India, two Superintending Engineers in the Irrigation Branch, the Chemical Examiner to Government in the United Provinces, and an Inspector of Schools. The city was the earliest centre of missionary enterprise in Northern India, for the Roman Catholic Mission was founded here in the sixteenth century, and in 1620 a Jesuit College was opened. Northern India was constituted an Apostolic Vicariate in 1822, with head-quarters at Agra; but in 1886 Agra became the scat of an Archbishop appointed by the Holy Sec. The Baptist Mission here was founded in 1811, and the Church Missionary Society commenced work in 1813.

Municipality.

Agra was constituted a municipality in 1863. During the ten years ending 1901 the income and expenditure averaged 3.3 laklis, excluding the loan account. In 1903-4 the income was 5.3 lakhs, which included octroi (2.4 lakhs), water rate (Rs. 68,000), rents (Rs. 37,000), sale of water (Rs. 33,000), and tolls (Rs. 35,000). The expenditure was 4-8 lakhs, including repayment of loans (1.3 laklis), conservancy (Rs. 70,000), water-supply and drainage (capital, Rs. 12,000; maintenance, Rs. 63,000), administration and collection (Rs. 50,000), roads and buildings (Rs. 24,000), and public safety (Rs. 41,000). An attempt was made between 1883 and 1887 to obtain' a water-supply from an artesian well, but was abandoned in favour of a supply from the Jumna. The work commenced in 1889, and water was first supplied to the city in 1891. extensions and improvements have been made since, and loans ' amounting to nearly 16 lakhs have been obtained from Government. In 1903 the daily consumption of filtered water was more than 92 gallons per head, and there were 811 house connexions. About 27 miles of drains are flushed daily. The drainage system has long been recognized as defertive, owing to the small flow in the Jumna during the hot season and changes in its channels. An intercepting sewer has recently been completed, which discharges its contents below the city.

The cantonment is ordinarily garrisoned by British and Cantonnative infantry and British artillery. Agra is also the head-ment, quarters of the Agra Volunteer Corps. The cantonment fund has an annual income and expenditure of over Rs. 60,000; a Cantonment Magistrate is stationed here.

The trade of Agra has undergone considerable changes Trade. under British rule, the principal factors being the alteration in trade routes due to the extension of railways and changes in native fashions. It was formerly the great centre through which sugar and tobacco passed to Rajputana and Central India, while salt was received from Rajputina, cotton and ghi from the surrounding country, and stone from the quarries in the west of the District. There was also a considerable trade in grain, the direction of which varied according to the Agra has now become a great railway centre, at seasons. which the East Indian and Great Indian Peninsula broadgauge lines and the narrow-gauge Raiputana-Malwa line meet. and these important functions of collection and distribution have increased and been added to. The recent opening of another broad-gauge line to Delhi will increase its trade still further. In addition to the products of the country, European piece-goods and metals are largely imported, and distributed to the neighbouring towns and villages. Agra was also famous for its native arts and manufactures, such as gold and silver wire-drawing, embroidery, silk-weaving, calico-printing, pipestems, shoes, carving in marble and soapstone, inlaying of precious stones in marble, and the preparation of millstones, grinding-stones, and stone mortars. Consequent on the growing preference for articles of European manufacture, the industries connected with embroidery, silk-weaving, wiredrawing, shoemaking, and pipe-stems have declined; and calico-printing is little practised. On the other hand, the trade in useful stone articles has prospered, and ornamental work has been fostered by the large sums spent in the restoration of the principal buildings and by the demand created by European And although some of the indigenous arts are depressed, new industries have been created. In 1903 there were six cotton gins and presses, employing 959 hands; and three cotton-spinning mills, with 30,000 spindles and 1,562 workers. The Agra Central jail has long been noted for the production of carpets, of which about 15,000 square yards are turned out annually; and a private factory manufactures the same articles. A flour-mill and a bone-mill are also working. The total value of the annual rail-borne truffic of Agra is nearly

4 crores of rupees. The trade with the rest of the United Provinces amounts to nearly half of this, and that with Rājputāna and Central India to a quarter. Bombay has a larger share of the foreign trade than Calcutta.

Education.

Agm is one of the chief educational centres in the United The Agra College was founded by Government in 1823, and endowed by a grant of land in 1831. In 1883 it was made over to a local committee, and now receives an annual grant of Rs. 7,000 from Government. In 1904 it contained 175 students in the Arts classes, besides 45 in the law classes and 312 in the school department. The Roman Catholic College, St. Peter's, was founded in 1841, and is a school for Europeans and Eurasians, with six students reading in college classes in 1904. In 1850 the Church Missionary Society founded St. John's College, which in 1904 contained 128 students in college classes and 398 in the school. It also has a business department with 56 pupils, and five branch schools with 350. The municipality maintains one school and aids 22 others with 1,756 pupils. In addition to these colleges and schools, there are a normal school for teachers, and a medical school (founded in 1855) for training Hospital Assistants. The latter contained 260 pupils, including female candidates for employment under the Lady Dufferin Fund. There are about twenty printing presses, and four weekly and six monthly papers are published. Agra is noted as the birthplace of Abul Fazl, the historian of Akbar, and his brother, Fairi, a celebrated poet. It produced several distinguished authors of Persian and vernacular literature during the nineteenth century. Among these may be mentioned Mir Taki and Shaikh Walf Muhammad (Nazīr). The poet Asad-ullah Khān (Ghālib) resided at Agra for a time.

Batesar.—Village in the Büh tahsil of Agra District, United Provinces, situated in 26° 56' N. and 78° 33' E., at a bend of the Jumna, 4x miles south-east of Agra city. Population (1901), 2,189. The place is celebrated for its fair, the largest in the District. Originally this was a religious festival, the great day being on the full moon of Kārtik (October-November), but it is now also celebrated as a cattle fair. Horses, cattle, camels, and even elephants are exhibited, and remounts for the native army and police are often bought here. For convenience a branch Government treasury is opened at the time of the fair. In 1904 the stock shown included 35,000 horses and ponies, 18,000 camels, 10,000 mules and donkeys, and 79,000 head of cattle; and about Rs. 13,000

was collected on account of bridge tolls, registration fees, and shop rents.

Fatehpur Sikri.-Town in the Kimoli takal of Arm District, United Provinces, situated in 27° 5' N. and 77° 46' E., on a metalled road 23 miles west of Agm city. Population (1901), 7,147. It was close to the village of Sikri that Babar defeated the Rojout confederacy in 1527; and here on the ridge of sandstone rocks dwelt the saint Salim Chishti, who foretold to Akbar the birth of a son, afterwards the emperor Jahangir. In 1569 Akbar commenced to build a great city called Fatchpur. and within fifteen years a magnificent series of buildings had been crected. The city was abandoned as a royal residence soon after its completion, but was occupied for a short time in the eighteenth century by Muhammad Shah; and Husain All Khan, the celebrated Saivid general, was murdered near here in 1720. The site of Fatchpur Sikri is still surrounded on three sides by the great wall, about 5 miles long, built by Akbar; but most of the large space enclosed is no longer occupied by buildings. The modern town lies near the western end, partly on the level ground and partly on the slone of the ridge. It is a small, well-paved place, containing a dispensary and a police station.

From close by the highest houses in the town a flight of steps leads up to the magnificent gateway, called the Buland Darwaza or 'lofty gate,' which forms the entrance to the great nundrangle of the mosque, 350 feet by 440. In this stands the mathle building containing the tomb of the saint Salim Chishti, the walls of which are elaborately carved. The sarcophagus itself is surrounded by a screen of lattice-work and a canopy inlaid with mother-of-pearl, which has recently been restored. Close by the north wall of the mosque are the houses of the brothers. Abul Fazl and Faizl, but the main block of the palace buildings lies some distance to the north-cast. On the west of this block is the large palace called after Jodh Bai, the Raiout wife of Akbar. It consists of a specious courtyard, surrounded by a continuous gallery, from which rise rows of buildings on the north and south, roused with slabs of blue enamel. A lofty and richly carved gate gives access to a terrace, on which stand the so-called houses of Birbal and Miriam, or the 'Christian Lidy.' The former is noticeable for its massive materials and the lavish minuteness of its detail. The 'Christian lady' was probably a Hindu wife. Reyond these buildings is another great courtyard, divided into two parts. The southern half contains the private apartments of

Akbar with the Khwābgāh, or sleeping-place, and the lovely palace of the Turkish Sultana. The latter is of sandstone, richly carved with geometrical patterns and hunting scenes. The Panch Mahal or five-storeyed 'building,' and the Divanikhās or private audience chamber, are the principal structures in the northern portion. The Panch Mahal consists of five calleries, one above another, and appears to have been copied from a Buddhist model. The Diwan-i-khās contains an enormous octagonal pillar, crowned by a circular capital, from which four galleries run to the corners of the room. According to tradition, Akbar used to hold his famous theological discussions in this place. Many of the buildings, and especially Miriam's house and the Khwabgah, were adorned with paintings. These have largely perished or been destroyed; but the scheme of some has been recovered, and a few restorations have been made. The eastern front of the palace was formed by the Diwan-i-um or public hall, close to which lay the baths on the south, and a great square called the Mint on the northeast. The palace buildings stand on the crest of the ridge, and below them lies a depression which once formed a great lake. Beyond the lake stretched the royal park. The long descent from the Diwan-i-am, through the Naubat-khana or entrance gate to the Agra road, is flanked by confused masses of ruins, the remains of the bazars of the old city.

Fatehpur Sikri was a municipality from 1865 to 1904. During the ten years ending 1901 the income and expenditure averaged about Rs. 5,000, octroi supplying most of the income. In 1903-4 the income was Rs. 9,000, and the expenditure Rs. 10,000. The town has now been made a 'notified area.' In the time of Akbar it was celebrated for its fabrics of hair and silk-spinning, besides the skill of its masons and stone-carvers. At present cotton carpets and millstones are the chief products. There are two schools with about 100 pupils.

[E. W. Smith, The Mughal Architecture of Fatchpur Sikri, 4 vols. (Allahabad, 1894-8).]

Firozābād Town.—Head-quarters of the tahsīl of the same name in Agra District, United Provinces, situated in 27° 9 N. and 78° 23' E., on the road from Agra city to Mainpuri, and on the East Indian Railway. Population (1901), 16,849. The town is ancient, but is said to have been destroyed and rebuilt in the sixteenth century by a eunuch, named Malik Firoz, under the orders of Akhar, because Todar Mal was insulted by the inhabitants. It contains an old mosque and some temples, besides a dispensary, and branches of the Ameri-

can Methodist Mission and the Church Missionary Society. A municipality was constituted in 1869. During the ten years ending 1901 the income and expenditure averaged about Rs. 14,000. In 1903-4 the income was Rs. 16,000, chiefly from octroi (Rs. 12,000); and the expenditure was Rs. 20,000. The trade of the place is chiefly local, but there is a cotton-ginning factory employing about 100 hands. The municipality maintains a school and aids four others with 190 pupils, besides the tahsili school with about 80 pupils.

Itimādpur Town.—Head-quarters of the tahsil of the same name in Agra District, United Provinces, situated in 27° 14' N. and 78° 12' E., on the main road from Agra city to Mainpurl, and 2½ miles from the East Indian Railway junction at Tūndla. Population (1901), 5,322. The town is named after its founder, Itimād Khān, who built a large masonry tank here, and is said to have been a cumuch in the service of Akbar. It is administered under Act XX of 1856, with an income of about Rs. 900. Trade is purely local. The tahsīlī school has about 100 pupils, and a primary girls' school 16 pupils, and there is a branch of the American Methodist Mission.

Sikandra.—Village in the District and taluit of Agra, United Provinces, situated in 27° 13' N. and 77° 57' E., 5 miles northwest of Agra city on the Muttra road. Population (roor), The village is said to have received its name from Sikandar Lodi, who built a palace here in 1495, which now forms part of the orphanage. Jahangir's mother, who died at Agra in 1622, is buried here; but the place is chiefly famous for the tomb of Akbar, which was built by Jahangir, and completed in 1612-3. It stands in a spacious garden of 150 acres, surrounded by massive walls and gateways in the middle of each side. The entrance is by a gateway of magnificent proportions, with four lofty minarets of white marble. The building is of unusual design, and according to Fergusson was probably copied from a Hindu or Buddhist model. It consists of a series of four square terraces, placed one above the other and gradually decreasing in size. The lowest is 320 feet square and 30 feet high, and has a large entrance adorned with marble mosaic. Above the highest of these four terraces, which are chiefly of sandstone, stands a white marble enclosure, 157 feet square, the outer wall of which is composed of beautifully carved screens. The space within is surrounded by cloisters of marble, and paved with the same material. In the centre is the marble cenotaph of the great emperor, a perfect example of the most

delicate arabesque tracery, among which may be seen the ninety-nine names of God. Finch, after describing his visit to the tomb in 1609, says that the intention was to cover the upper enclosure with a marble dome lined with gold. The Church Missionary Society has an important branch, at Sikandra, with a church built in 1840, and an orphanace established after the famine of 1837-8, which contains about 100 boys and girls, mostly famine waifs. In addition to onli nary literary subjects, some of the children are taught cloth and carpet-weaving, bookbinding, printing, and other trades.

Tündla.-Village in the Itimadpur tahsil of Agra District, United Provinces, situated in 27° 13' N. and 78° 14' E. Population (1901), 3,044. It is the junction for Agra on the main line of the East Indian Railway, and is an important railway The railway medical officer residing here is usually invested with magisterial powers to try petty cases, and there is a church with a resident clergyman. The town is adminitered under Act XX of 1856, with an income of about Rs. 500.

Bounfiguration, and river <ystem.</p>

Farrukhābād District. - Easternmost District of the dances, con- Agra Division. United Provinces, lying between 26° 46' and 27° 43' N. and 79° 8' and 80° 1' E., with an mea of 1,685 square miles. On the north the Ganges divides it from Budaun and Shahlahanpur: on the east is the Oudh District of Hardoi, partly separated by the Ganges: Camppore and Etawah lie to the south, and Mainpuri and Etah to the The greater part of the District lies in the Doan along the right bank of the Ganges, but the Aligarh tahsil lies wholly on the opposite bank. The former division consists of an upland area called hangar, and a low-lying tract called tarai, katri, or kachohā. The lowlands stretch from the present hed of the Ganges to the old high bank, with a breadth of 6 miles in the north of the District. At Farrukhābād the river is at present close to its high bank, but farther south it diverges again to a distance of 4 miles. The tract across the Ganges is untirely composed of low-lying land subject to floods, which cover almost the whole area. The uplands are divided into a series of small doubs by the rivers Bagar, Kali Nadi (East), Isan, Arind, and Pandu, which flow roughly parallel to each other and join the Ganges. These divisions are generally similar. On each bank of the rivers is a small area of alluvial soil, from which rise sandy slopes. The soil gradually improves, becoming less sandy; and the central portion is good loam, with here and there patches of barren land called usar, often covered with saline efflorescences. The most northern division, from the old high bank to the Baghr, is the pootest. Resides the small rivers already mentioned, the Ramganga flows through part of the Aligarh taksil; and an old channel of the Gauges. called the Burbganga, lies between the high bank and the present hed of the river in the north of the District. Shallow lakes or jhils are common in the Kaimgani, Aligarh, Chhibraman, and Tirwa takrils,

The District consists entirely of Gangetic alluvium. Kankar Geology. is the chief mineral product, but saline efflorescences (reh) are

The flora presents no peculiarity. The principal groves, Botany, which cover 55 square miles, are of mango trees, and the District is uniformly though not thickly wooded. The toddy palm (Borassus flabellifer) is commoner than in the neighbouring Districts. In the alluvial tract labul is the commonest tree. In the uplands there are considerable stretches of dhak jungle (Bulea frondosa). Some damage has been done in the sandy tracts by the spread of a grass called kuns (Saccharum stontancum).

Antelone are still very common, and nilgai are occasionally Fanna. seen. Jackals, hyenas, wolves, and foxes are also found, and wild hog are numerous. Snipe and duck abound in the cold season. Fish are common in the rivers and small tanks. and are largely used as food. Crocodiles are found in the Ganges and Kali Nadi.

Parrukhābād is one of the healthiest Districts in the Doab. Climate Its general elevation is considerable, the climate is dry, and and temthe country is remarkably free from epidemics. The trans-Gangetic parganas are, however, damper and more feverish, though they are cool in summer. The mean temperature varies from about 58° in January to about 95° in June.

The annual rainfall averages about 33 inches. Variations Rainfall. from year to year are considerable, but the fall is very uniform throughout the District.

The northern part of the District was included in the ancient History. kingdom of Panchāla mentioned in the Mahābhārata, and places are still connected by tradition with episodes in the life of Draupadi, wife of the Pandava brothers. Numerous remains of the Buddhist period point to the importance of several towns early in the Christian em. In the fourth and fifth centuries Kanauj was included in the domains of the Gupta emperors; and when the power of that dynasty declined, in the sixth century, a petty independent line of Maukhari kings ruled here. The Maukharis fell before the kings of

Mālwā, who in turn were defeated by the ruler of Thanesar in the Punjab. Harshavardhana of Thanesar, early in the seventh century, founded a great empire in Northern India. and Hiuen Tsiang, the Chinese pilgrim, describes the maynificence of his court1. The empire collapsed on Harshavardhana's death, but inscriptions and copperplates tell of other dynastics ruling at Kanauj in later years. At the end' of 1018, when Mahmud of Ghazni crossed the Jumna, the Rainuts were in power at Kanauj, and had to submit to the sudden shock of Muslim invasion. Although Kanauj was plundered, the expedition was a mere raid, and Rathors ruled it for nearly 200 years longer. In 1194, however, Muhammad Ghori defeated the last great Rājā, Jai Chand, and Hindu rule in the central parts of the Provinces was practically at an end. During the early years of Muhammadan rule Kanaujwas the seat of a governor, and the District was constantly the scene of revolt. At the end of the fourteenth century part of it was incorporated in the new kingdom of Jaunpur, while Kanauj became the residence of Mahmud Tughlak when he lost the throne of Delhi. During the first eighty years of the fifteenth century the District suffered much from the struggle between Delhi and Jaunpur, but in 1479 was finally restored to the empire. While the Mughal power was gradually being consolidated in the sixteenth century, and during the struggle with: the Pathans which led to the establishment of the short-lived Suri dynasty, fighting was frequent, and in 1540 Humayon suffered a disastrous defeat near Kanaul. Under the great Mughal emperors the District enjoyed comparative peace, but early in the eighteenth century it became the nucleus of one of the independent states which arose as the Mughal emptre crumbled away. The founder was Muhammad Khan, a Bangash Afghan belonging to a village near Kaimganj. brought 12,000 men to Farrukh Siyar in his fight for the throne. and was rewarded by a grant in Bundelkhand. - In-1714 he obtained a grant near his own home and founded the city of Farrukhābād. Muhammad Khān was governor of the Province of Allahabad for a time, and later of Malwa, but his chief services were rendered as a soldier. At his death in 1743 he held most of the present Districts of Farrukhabad, Mainpuri, and Etali, with parts of Campore, Aligarh, Etawah, Budaup, and Shahjahanpur. His son, Kaim Khan, was crastily embroiled with the Robillas by Safdar Tane, Nawab of Oudh; and

<sup>1</sup> Beal, Buddhist Records of the Western World, vol. 1, p. 206; see also Bana's Harm Charita.

lost his life near Budaun in 1740. The Farrukhabad domains were formally annexed to Oudh, but were recovered in 1750 by Almad Khãu, another son of the first Nawab, who defeated and slew Raja Nawal Rai, the Oudh governor. Safdar lang called in the Marathas, who besieged Ahmad Khan in the fort at Fateligarli near Farrukhābād, and drove off the Rohillas who had come to his aid. Ahmad Khan had to fly to the foot of the Himilayas, and in 1752 was allowed to return after ceding half his possessions to the Marathus. In 1761 he did good service to Ahmad Shah Durrani at Panipat, and regained much of his lost territory. The recovery embroiled him with Shuja-ud-daula, the Nawab of Oudh, who coveted the tract for himself; but Ahmad Khān was too strong to be attacked. In 1771 the Marathas again recovered the parganas which had been granted to them, and shortly afterwards Ahmad Khan died. His territory then became tributary to Oudh. In 1777 British troops were stationed at Fatchgarh as part of the brigade which guarded Oudh, and from 1780 to 1785 a British Resident was posted here. The latter act was one of the charges against Warren Hastings, who had engaged to withdraw the Resident. In 1801 the Oudh government ceded to the British its lands in this District, together with the tribute paid by the Nawab of Farrukhābād, and the latter gave up his sovereign rights in 1802. Two years later Holkar mided the Doab, but was caught by Lord Lake after a brilliant night march and his force was cut to pieces close to Farrukhābād.

The District remained free from historical events up to the date of the Mutiny. News of the outbreak at Meerut reached Fatchgarh on May 14, 1857; and another week brought tidings of its spread to Aligarh. The 10th Native Infantry showed symptoms of a mutinous spirit on May 29; but it was not till June 3 that a body of Oudh insurgents crossed the Ganges, and arranged for a rising on the following day. The European officials and residents abandoned Fatebgarh the same evening; but several of them returned a few days later, and remained till June 18, when another outbreak occurred, and the rebels placed the Nawab of Furrukhabad on the throne. The aist Native Infantry, from Sitapur, marched into Fatchgarh, and the Europeans began to strengthen the fort. On June 25 the rebels attacked their position, which became untenable by July 4. The fort was then mined, and its defenders exemped in boats. The first Fatchgarh boat reached Campore, where all its fugitives were murdered by the Nama on July 10; the second boat was stopped ten miles down the Ganges, and all in it were captured or killed except three. The Nawāb governed the District unopposed till October 23, when he was defeated by the British at Kanauj. The troops, however, passed on, and the Nawāb, with Bakht Khān of Bareilly, continued in the enjoyment of power until Christmas. On January 2, 1858, British forces crossed the Kāli Nadī and took Fatehgarh next day. The Nawāb and Fīroz Shāh fled to Bareilly. Brigadier Hope defeated the Budann rebels at Shamsābād on January 18, and Brigadier Seaton routed another body on April 7. In May, a force of 3,000 Bundelkhand insurgents crossed the District, and besieged Kaimganj; but they were soon driven off into the last rebel refuge in Oudh, and order was not again disturbed.

Archneology. The ancient sites in the District are numerous. Sankisa has been identified with a great city mentioned by Hiuen Tsiang, and from Kampil westwards are mounds which contain a buried city. The buildings of the Hindu and Buddhist periods have, however, crumbled away, or, as at Kanauj, been used as the material for mosques. The buildings of the Nawābs of Farrukhābād are not important.

The people

There are eight towns and 1,689 villages in the District Population decreased between 1872 and 1881 owing to famine, and in the next decade owing to deterioration due to floods; it has risen with the return of more favourable seasons. The number of inhabitants at the last four enumerations was at follows: (1872) 917,178, (1881) 907,608, (1891) 858,687, and (1901) 925,812. There are six tahsils—Kanauj, Tirwā, Chhibramau, Farrukhābād, Kaimoanj, and Alīgaru—the head-quarters of each being at a town of the same name, except in the case of Kanauj, of which the head-quarters are at Sarai Mīrān. The principal towns are the municipality of Farrukhābād cum Fatehgarh and Kanauj. The table on the next page gives the chief statistics of population in 1901.

Hindus form 88 per cent. of the total, and Musalmans 12 per cent. There are only 1,100 Christians. The density is rather above the Provincial average, and between 1891 and 1901 the rate of increase was comparatively large. More than 99 per cent. of the population speak Western Hindi of the Kananjia dialect.

Castes
und occurpations.

The following are the most numerous Hindu castes: Kisāns (cultivators, akin to the Lodhas of other Districts), 94,000; Chamārs (leather-workers and labourers), 93,000; Ahlus

(graziers and cultivators), By,000; Brähmans, 76,000; Rajputs, 73,000; and Kachhis (cultivators), 70,000. Kurmis (28,000) are also important for their skill and industry in agriculture. The only easte peculiar to the District is that of the Sadhs, most of whom are cotton-printers by trade; they are distinguished by belonging to a special sect, which does not recognize the worship of idols or the supremacy of the Brahman. The District is notable for the large number of Muham madans of foreign origin; Pathans number 34,700; Shaikhs 29,800; Suivids, 5,800; the most numerous artisen caste is that of the Dhunas or cotton-carders, 7,100. As many as 61 per cent, of the population are supported by agriculture, which is a high proportion. Rajputs hold two-fifths of the land, and Brahmans and Musalmans nearly one-fifth each. Ahirs, Kisans, Raiputs, Brahmans, Kachins, and Kurmis occupy the largest areas as cultivators.

The American Presbyterian Mission was founded in 1838, Christian and 489 out of the 699 native Christians in 1901 were Pres-missions. byterians. Many of them reside in the village of Rakha near Fatchgarh, which was held by the mission on lease for sixty vears.

The soil varies from sand to fertile learn and stiff clay, which General ordinarily produces rice. Each of the four watersheds between agricultural conthe small rivers which divide the uplands is generally composed distons. of good loam, with occasional patches of sandy soil, and some large usar plains, the soil near which is clay. The slopes to the rivers are usually sandy; and these and the lowlands near the Ganges and the Aligarh tousil are precarious tracts, especially liable to suffer from excessive rain, which causes a rank growth of coarse grasses. On the whole the Ramganga deposits a more fertile silt than the Ganges.

Chief agricultural stanrincipal i rojis.

The District is held on the usual tenures of the United Out of 3,563 mahāls, 2,432 are zamindāri, 1,046 tisties and pattidari, and 85 bhaiyāchārā. A few estates are held on talukdari tenure. The main agricultural statistics for 1903-4 are given below, in square miles:-

Taksil.		Total.	CultivateL	Irrigated.	Cultitable

Total		1,685	1,011	378	280

The principal food-crops, with the areas sown in 1903-4, are: wheat (326 square miles), barley (191), jowar (140), and gram (02). Less important are maize (87), bajra (102), and arhar (72). Rice is grown chiefly in the outlying village lands, and is of poor quality except in the Tirwa talistl. Cotton occupied to square miles and sugar-cane er; but the most valuable miscellaneous crops are poppy (47 square miles), tobacco (3), and potatoes (7). The tobacco of the Kaimgani talisit has a more than local reputation, as it is irrigated with brackish water, which improves the flavour. Indian hemp or blang (Cannabis sativa) is cultivated in a few villages.

Improvements in agricultural practice.

Cultivation has slightly decreased in area during the last thirty years, but has intensified in quality. The District is noted for its high standard of cultivation, chiefly in the hands of the Kurmis and Kāchhīs. The best fields bear three crops in a year: maize in the rains, potatoes in the cold season, and tobacco in the spring. The two latter crops require rich manuring and plentiful irrigation, and are thus largely grown near towns. The cultivation near Farrukhabad and Kaimgani can hardly be excelled in the United Provinces. Loans under the Agriculturists' Loans Act are taken freely during adverse seasons; they amounted to a total of r-z lakhs between 1891 and 1900, but have now dropped to about Rs. 2,000 a year. The amounts advanced under the Land Improvement Loans Act are still smaller. Drainage works have been carried out in many parts of the District with good results.

Cattle, panics. shrep, and 170-114.

There is no indigenous breed of cattle, and all the best animals are imported. Attempts to improve the breed have had no result so far. The ponies likewise are inferior. Sheep and goats are bred locally, and are also imported from beyond the lumna.

The north and south of the District are fairly well supplied Inigation by canal-irrigation from branches of the Lower Ganges Canal, and a third branch irrigates a small area in the centre. Wells, however, are the principal source of origination, and in 1993-2 supplied 223 miles, while canals served only 103. The thits and rivers are used to an appreciable extent, serving 38 and 12 square miles respectively. Water is generally raised from wells in a leathern bucket worked by bullocks, but in low-lying tracts the lever (dlienkli) is used. In the case of jills and rivers, a closely-woven basket swung on ropes held by two or four men is the common form of lift.

Kankar is the only form of stone found, and it occurs in Minerals. many parts of the District in both block and nodular forms. Saltpetre is manufactured to a considerable extent and exported.

Farrukhābād and Kanauj are celebrated for cloth printing Ansand applied to curtains, quilts, table-covers, and the like; but the manufacindustry is languishing at Kanauj. A European demand for the articles produced at Farrukhābād has recently sprung up. Farrukhäbad is also a considerable centre for the manufacture of gold lace and of brass and copper vessels. Tents are made in the Central jail and by several private firms, and Kanauj is noted for the production of scent. There are a few indigo factories in the District, but the manufacture is declining. A flour-mill has recently been opened. The Government guncarriage factory employed 705 hands in 1903, but has undertaken no new work since the completion of the Jubbulpore factory.

The chief exports are: tobacco, opium, potatoes, fruit, Commerce. bhang, saltpetre, cotton-prints, scent, and brass and copper vessels: while the imports include grain, piece-goods, salt, timber, and metals. Tobacco, scent, and mangoes are largely exported to Central India and Rajputana. The rest of the trade is chiefly local, and is carried on at small markets. Up to 1881 the want of railway communication affected the commerce of the District, which has revived considerably since.

Farrukhābād is fairly well supplied with means of communi-Railwaya cation, except in the Aligarh talistl, which is often flooded. and roads. The Campore-Achbnera Railway passes through the length of the District near the Ganges, and a branch of the East Indian Railway from Shikohābād was opened in 1906. 142 miles of metalled roads, all maintained by the Public

Works department; the cost of half of these is, however, local, and 868 miles of unmetalled roads are also maintained by the District board. Avenues of trees have been planted along 118 miles. The grand trunk road passes through the southern half of the District with a branch to Farrukhābād city, which is continued to Shāhjahānpur and Bareilly. Another road gives communication with the north of the District.

Famine

The famine of 1783 doubtless affected this District, though it is not specially referred to in the accounts. In sub-sequent famines Farrukhābād suffered most in 1803-4, 1815-6, 1825-6, and 1837-8. In the latest of these, relief works on the modern system were started, especially along the grand trunk road. Distress was intense, and Brāhmans were seen disputing the possession of food with dogs, while mothers sold their children. Expenditure from Government funds amounted to 1.8 lakhs, and 6 lakhs of revenue was remitted. There was not much distress in 1860-1 or 1868-70, but in 1877-8 scarcity was severely felt. The southern part of the District was then the most precarious, and this is now the portion best protected by canals. In 1896-7 there was some distress; but it was not severe, and population increased during the decade, except in the Kanauj talisil.

District

Besides the Collector, the District staff usually includes one member of the Indian Civil Service and four Deputy-Collectors recruited in India. There is a talistider at the head-quarters of each talist. Other officials include an Executive Engineer of the Canal department, two opium officets, a salt officer, and the Superintendent of the District and Central jails.

Civil
justice and
crime.

Civil work is disposed of by three District Munsifs, a Sub-Judge, and a District Judge, who also hears Sessions cases Crime is of the ordinary nature, but the District is subject to outbreaks of dacoity. Female infanticide was formerly very common, but few households are now under surveillance. Opium is largely grown in the District, and small purtious of the drug are often retained by the cultivators for personal use or illicit sale.

Land revenue administration The District was acquired in 1801 and 1802, and was at first administered by an Agent to the Governor-General, but a Collector was appointed in 1806. Early settlements were for short periods, and the collection of revenue gave much trouble, owing to the turbulence of the people, especially cast of the Ganges. The first regular settlement was made about 1837, the demand being fixed at 12-9 lakhs; but this was

reduced in 1845 by 114 lakhs, owing to the effects of the famine of 1838. The next revision was made between 1866 and 1875, and is noteworthy for the improvements in procedure introduced by Mr. (now Sir Charles) Elliott, whose methody were copied in other Districts. The assessment was made on a valuation of the rental 'ussets,' calculated by ascertaining standard rates for different classes of soil from rates octually paid. Each village was divided for this purpose into tracts of similar soil, instead of each field being separately classified. The estimated 'assets' were also checked by comparison with the actual rent-rolls. The revenue assessed was 12-5 lakhs. In the precarious tracts liable to flooding the demand broke down, and in 1890-2 reductions amounting to Rs. 62,000 were made. The latest revision was carried out between 1800 and 1003. Revenue was assessed on actual rent-rolls. checked and corrected, where necessary, by standard rates, and during settlement rents were enhanced by Rs. 63,000. About two-thirds of the tenants' holdings are protected by occurancy rights. The new demand amounts to 12-2 lakhs, representing 49 per cent, of the net 'assets,' The settlement was thus practically a redistribution, and the deteriorated tracts have been assessed lightly. The incidence of revenue is Rs. 1-4-0 per acre, varying from Rs. 1-5-0 in the high land to 8 annas in the alluvial tract. The total collections on account of land revenue and total revenue have been, in thousands of rupecs:---

1	1850-1.	then to	10/A+ f	1977-1
1				
Land revenue	12,29	11,19	11,59	12,18
Total revenue	15,54	17,06	18,74	19,72

Besides the municipality of FARRUKHARD com FATEHGARH, Local self-seven towns are administered under Act XX of 1856. Out govern-side these, local affairs are managed by the District board, which had an income of 1.3 lakhs in 1903-4, chiefly derived from rates. The expenditure was 1.5 lakhs, of which Rs. \$1,000 was spent on toads and buildings.

There are eighteen police stations and one outpost in the Police and District. The Superintendent of police had a force of a falls, inspectors, 82 subordinate officers, and 410 constables in 1904, besides 230 municipal and town police, and 2,100 village and road police. At Fatchgarh there is a Central jail, besides the ordinary District fail.

Lducrtion.

The District takes a medium position in the Provinces as regards literacy, and only 3 per cent. (5.4 males and o.4 females) of the population could read and write in 1901. The number of public schools fell from 184 in 1880-1 to 156 in 1900-1; but the number of pupils rose from 5,294 to 7,271. In 1903-4 there were 233 public schools with 9,383 pupils, of whom 672 were girls, besides 41 private schools with 457 pupils. Four schools are managed by Government and 128 by the District or municipal boards. The total expenditure on education in the same year was Rs. 55,000, of which Rs. 37,000 was met from Local funds and Rs. 11,000 from fees.

liospitals and disnensaries. There are nine hospitals and dispensaries, with accommodation for 112 in-patients. In 1903 the number of cases treated was 52,000, of whom 1,900 were in-patients, and 4,500 operations were performed. The total expenditure was Rs. 14,500, chiefly met from Local funds.

Vaccum tion. About 22,300 persons were successfully vaccinated in 1903-4, representing 24 per 1,000 of the population—a low proportion. Vaccination is compulsory only in the municipality and the cantonment.

[W. Irvine, 'The Bangash Nawabs of Farrukhabad,' Journal of the Bengal Asiatic Society (1878, p. 260); District Gasetteer (1884, under revision); H. J. Hoare, Settlement Report (1903).

Kanauj Tahsil (Kunnauj).—South-eastern talisil of Farrukbābād District, United Provinces, conterminous with the pargana of the same name, lying along the Ganges, between 26° 56' and 27° 12' N. and 79° 43' and 80° 1' E, with an area Population decreased from 117,229 in of 181 square miles 1801 to 111,215 in 1901. There are 206 villages and one town, KANAUJ (population, 18,552). The demand for land revenue m 1903-4 was Rs. 1,95,000, and for cesses Rs. 31,000. The density of population, 631 persons per square mile, is above the District average. The talisti consists of two parts: the uplands or bangar, and the lowlands near the Ganges, or kachaha, the former covering the larger area. The Kālī Nadī (East) crosses the tahsil and joins the Ganges. In 1903-4 the area under cultivation was 124 square miles, of which 43 were irrigated. Irrigation is supplied almost entirely from wells, and the tract is liable to suffer in dry seasons. This was the only takit in the District which lost in population between 1891 and 1901.

Tirwā Tahsīl.—Southern tahsī of Farrukhābād District, United Provinces, comprising the parganas of Tirwā, Saurikh, Sakatpur, and Sahrāwā, and lying between 26° 46' and 27° 5' N. and 79° 19' and 79° 58' E., with an area of 380 square miles.

It is bounded on the north by the Isan, and the Ariad and Panda rivers form part of its southern boundary. Population increased from 168,673 in 1801 to 180,086 in 1901. There are 256 villages and two towns, the larger being Trawa, the taket head-quarters (population, 5,763). The demand for land revenue in 1903-4 was Rs. 2,53,000, and for cesses Rs. 45,000. The density of population, 474 persons per square mile, is below the District average. The tabil consists of a central table-land of fertile loam, through the centre of which passes the Caympore branch of the Lower Ganges Canal, flanked by sandy tracts sloping down to the rivers north and south. In the north are found numerous swamps and small lakes, but drainage operations have improved this area considerably. Rice is grown more extensively in this takstl than elsewhere in the District. In 1903-4 the area under cultivation was 197 square miles, of which tot were irrigated, canals and wells serving an equal area. Tanks and small streams supply 7 or 8 square miles.

Chhibraman Tabsil.—South central tabalof Farrukhabid District, United Provinces, comprising the pargunas of Chhibraman and Talgrain, and lying between 26° 58' and 27° 14' N. and 70° 23' and 79° 47' E., with an area of 240 square miles. It is bounded by the rivers Kall Nadi (East) and Ganges on the north, and by the Isan on the south. Population increased from 111,114 in 1891 to 126,705 in 1901. There are 240 villages and two towns: Chimeranau (population, 6,526), the taket head-quarters, and Taloram (5,457). The demand for land revenue in 1902-4 was Rs. 1,90,000, and for cesses Rs. 32,000. The density of population, 528 persons per square mile, is almost the same as the District average. In the centre of the takst/ there is a level stretch of fertile loam, crossed from north to south in the west by a ridge of sandy soil, and with sandy slopes approaching the alluvial soil on the banks of the rivers. The eastern portion is remarkable for the large area covered by swamps and lakes. The area under cultivation in 1003-4 was 160 square miles, of which 64 were irrigated. The Bewar branch of the Lower Ganges Canal supplies about 14 square miles in the west of the taketh and wells most of the remainder, but tanks or jhils irrigate 4 or 5 square miles. In several villages thang (Indian homp) is cultivated.

Farrukhābād Tahsu.—Head-quarters tahsil of Farrukhabād District, United Provinces, comprising the farganas of Bhojpur, Muhammadābād, Pahāra, and Shamsābād East, and lying between 27° 9' and 27° 28' N. and 79° 15' and 79° 44' E., with an area of 339 square miles. It is bounded on the east

by the Ganges and on the south by the Kali Nadi (East). Population increased from 244,896 in 1891 to 250,35: in 1901. There are 387 villages and one town, FARRUKHARAD cum FATEHOARH (population, 67,338), the taksil and District headquarters. The demand for land revenue in 1904-4 was Rs. 2,55,000, and for cesses Rs. 48,000. The density of population. 730 persons per square mile, is the highest in the District. Excepting a small tract of alluvial land near the Ganges, the whole talist lies on the uplands, sloping down on the south to the basin of the Käli Nadi. Through the north-east corner flows the small river Bagar, whose bed has been deepened and snaightened to improve the drainage. Immediately above the Gauges, and especially round Fatchgarh, some of the finest cultivation in the District is to be found. Here a treble crop of maize, potatoes, and tobacco is often mised, while fine groves of mango trees produce a plentiful supply of fruit, which is largely exported. In 1903-4 the area under cultivation was 223 square miles, of which 81 were irrigated. Fatchgath branch of the Lower Ganges Canal serves a small area, but wells are the chief source of irrigation.

Kaimganj Tahsil.—North-western tahsil of Farrukhābād District, United Provinces, comprising the parganas of Kampil and Shamsabad West, and lying along the southern bank of the Ganges, between 27° 21' and 27° 43' N. and 79° 8' and 79° 37' E., with an area of 363 square miles. Population increased from 143,557 in 1891 to 168,606 in 1901. There are 307 villages and two towns: Kaimeans (population, 10,369), the talisti head-quarters, and Shamsanad (8,375). The demand for land revenue in 1903-4 was Rs. 2,10,000, and for cesses Rs. 36,000. The density of population, 464 persons per square mile, is below the District average. The taksil contains a larger tract of lowland than any other in the District except Aligarh; but the greater part of it is situated in the uplands. The Bagar river winds through the southern portion, and on either bank stretches a wide expanse of sandy land, which extends on the north to near Kampil. North and west of this is a belt of fine yellowish loam, tilled by Kurmis, and famous for its sugar-cane. and near the towns of Kampil, Kalmganj, and Shamsabad for its tobacco, which acquires a special flavour from the brackish water of the wells. The area under cultivation in 1903-4 was 226 square miles, of which 72 were irrigated. The Fatchgarh branch of the Lower Ganges Canal supplies irrigation through the centre of the uplands, and the area irrigated from canals is slightly larger than that supplied by wells. There are several

considerable swamps, from which water is also taken; but a good deal has been done to improve the drahuage.

Aligarh Tausil.—North-eastern tokal of Farrakhabad District. United Provinces, comprising the parganar of Amritpur, Paramingar, and Klinkhatman, and lying between 22° 12' and 27° 40' N. and 79° 32' and 79° 45' E., with an area of 182 square miles. Population increased from 73,218 in 1891 to 85,848 in 1901. There are 203 villages, but no town. Aligaria, the tabil head-quarters, is a small village. The demand for land revenue in 1903-4 was Rs. 1,18,000, and for cesses Rs. 10,000. The density of population, 472 persons per square mile, is below the District average. The taltil is a damn alluvial tract, lying along the left bank of the Ganges, and crossed by the Ramganga, which has an erratic course, changing almost every year. After heavy rains a large portion is under water, and several channels connect the two rivers. In 1903-1 the area under cultivation was 111 square miles, of which 17 were irrigated. The wells are usually small shallow pits, from which water is raised in an earthen pot tied to a lever (dienkli). Where floods are not feared, sugar-cane and poppy are largely ELULIT.

Chhibrāmau Town.—Head-quarters of the tahsil of the same name in Farrukhābād District, United Provinces, situated in 17° 9' N. and 79° 31' E. It lies on the grand trunk road, and is connected by an unmetalled road with Farrukhābād city. Population (1901), 6,526. The early history of the town is legendary, but by the time of Akbar it was the head-quarters of a pargana. Nawāb Muhammad Khān of Farrukhābād, early in the eighteenth century, founded a new quarter called Muhammadganj, with a fine sarai which was improved 100 years later by a British Collector. The town prospeted by its situation on the grand trunk road. It is administered under Act XX of 1856, with an income of about Rs. 1,100. It contains a tahsilt and dispensary. A market is held twice a week. The town school has 120 pupils, and two primary schools 57.

Farrukhābād City.—Town which gives its name to Farrukhābād District, United Provinces, situated in 27° 24' N. and 79° 34' E., 769 miles by rail from Calcutta and 924 miles from Bombay. It lies near the Ganges, at the terminus of a branch of the East Indian Railway from Shikohābād, and also on the Cawnpore-Achhnerā Railway, and on a branch of the grand trunk road. The head-quarters of the District and the cantonment are at Fatehgarn, 3 miles east, and the two towns form a single municipal area. Population is decreasing. At

the last four enumerations the number of inhabitants was as follows: (1872) 79,204, (1881) 79,761, (1891) 78,032, and (1901) 67,338. The population of Farrukhābūd alone was 51,060 in 1901. Out of the total, Hindus numbered 47,041 and Musalmāns 19,208.

Farrukhābād was founded about 1714 by Nawāb Muhammad Khān, and named after the emperor Farrukh Siyar. Its history has been related in that of the District. The town is sunounded by the remains of a wall which encloses a triangular area. The houses and shops are well built, and often adomed with beautifully carved wooden balconies. Near the northern boundary is situated a high mound on which stood the Nawāb's palace, but its place has been taken by the town ball and taksih. The streets are fairly broad and often shaded by trees. There are, however, few buildings of much pretension, the District school being perhaps the finest. North of the city lie the tombs of the Nawābs, chiefly in a ruinous state. The town contains a dispensary and a female hospital.

The municipality was constituted in 1864. During the ten years ending 1901 the income averaged Rs. 57,000, and the expenditure Rs. 56,000. In 1903-4 the income was Rs. 70,000, chiefly derived from octroi (Rs. 57,000); and the expenditure was Rs. 93,000, including a drainage scheme (Rs. 38,000), conservancy (Rs. 13,000), public safety (Rs. 15,000), and administration and collection (Rs. 8,000). The drainage scheme, which has been financed from savings, is to cost about a lakh.

For many years after annexation the trade of Farrukhābād was considerable, owing to its position near the Ganges and the grand trunk road, but the opening of the East Indian Railway diverted commerce. At present there is some manufacture of gold lace and of brass and copper vessels, and the calicoprinting industry is gaining a more than local celebrity. The latter is chiefly in the hands of Sādhs, a kind of Hindu Quakers. A flour-mill has recently been started. There is also a considerable export of potatoes, tobacco, and mangoes. The high school contained 164 pupils in 1904; the American Presbyterian Mission school, 217; and the town or middle school, 113. There are also several primary schools.

Fatehgarh.—Head-quarters of Farrukhābād District, United Provinces, situated in 27° 24′ N. and 79° 35′ E., on a branch of the grand trunk road, and on the Cawnpore-Achhnerā Railway. Population (1901), 16,278. The fort was built by Nawāh Muhammad Khān about 1714, but first became of importance in 1751, when Nawāb Ahmad Khān was besieged in

it by the Marathas. In 1777 this was chosen as one of the stations for the brigade of troops lent to the Nawah of Oudh, but it did not pass into the possession of the British till 1802, when it became the head-quarters of an Agont to the In 1804 Holkar reached Fatchgath in his Governor-General. raid through the Doab, but was surprised and put to precipitate flight by Lord Lake. When the Mutiny broke out in 1857, a few of the European residents fled early in June to Cawopore, where they were seized by the Nana and massacred. Those who remained behind, after sustaining a siege of upwards of a week, were forced to abandon the fort, which had been undermined by the rebels, and to betake themselves to bonts. On their way down the Ganges, they were attacked by the rebels and villagers on both sides of the river. One boat reached Bithur, where it was captured; the occupants were taken prisoners to Camppore and subsequently massacred. Another boat grounded in the river the day after leaving Fatehgarh, and all the passengers but three were shot down or drowned in their attempt to reach land. A number of the refugees were brought back to Fateligarh, and, after being kept in confinement for nearly three weeks, were shot or sabred on the parade-ground; their remains were east into a well over which has been built a monument, with a memorial church near it. The fort lies near the Ganges at the north of the station. From 1818 it was used as a gun-carriage factory, but since 1906 it has been converted into an army clothing dépôt. Near it stand the barracks of the British and native infantry garrison, partly occupied at present by a mounted infantry class. The rest of the cantonment and the civil station lie along the high bank of the river separating the native town from the Ganges.

The municipal accounts are kept jointly with those of FARRURBĀRĀD CITV, which lies three miles away. The cantonment had a population of 4,060 in 1901, and the annual income and expenditure of cantonment funds are each about Rs. 8,000. Trade is almost entirely local, but tents are made in three private factories and in the Central jail. The guncarriage factory employed 795 hands in 1903. A middle school has 143 pupils, and there are several primary schools, including one in the gun-carriage factory, a girls' school, and a school for European and Eurasian children.

Kaimganj Town.—Head-quarters of the tahril of the same name in Farrukhabad District, United Provinces, situated in 27° 30' N. and 79° 21' E., on the Campure-Achhuera Railway, and also at the terminus of a metalled road from

Population (1901), to,369. Farrukhābād city. It was founded in 1713 by Muhammad Khān, first Nawāb of Farrukhābād, who named it after his son, Kaim Khān. It is the centre of a group of villages inhabited by a colony of Pathans who settled here early in the seventeenth century. The best known of these villages is Mau Rashidabad, now a great tobacco field, about a mile north of Kaimgani. The Pathans of this neighbourhood are still noted for the number of men they supply to the native army. In 1857 the tabsili was ineffectually besieged for a time by a band of fugitive insurgents from Kilni. The town consists whiefly of a wide metalled bazar, about a mile long, from which branch many narrow unmetalled lanes. It contains a takstil, munsifi, and dispun-Kaimgani is administered under Act XX of 1846. with an income of about Rs. 2,000. There is a considerable trade in tobacco, which is largely grown in the neigh-The old manufacture of swords and matchlocks has dwindled down to a trade in ordinary knives and betelnut cutters. The town school has rog pupils, and three primary schools 62.

Kampil.—Village in the Knimganj tahsil of Farrukhābād District, United Provinces, situated in 27° 35' N. and 79° 14' E., 28 miles north-west of Fatebearh. Population (1901). Kampil is mentioned in the Mahabharata as the 2.366. capital of South Panchala, under king Drupada. Here his daughter, Draupadi, married the five Pandava brethren. The villagers still show the mound where the Rājā's castle stood, and the place, a few miles away, where the swaramvara, or ceremony at which Draupadi chose her husband, took place. At the end of the thirteenth century, Kampil appears as a nest of highway robbers, against whom the emperor Ghiyas-ud-din Balban marched a force in person, and built here a fort. The town and its vicinity constantly gave trouble in later years, but the Rathor inhabitants were gradually suppressed. West of the town stretches a long series of ruins in which ancient coins are found. There are a fine Jain temple and a primary school with about 60 pupils.

Kanauj Town (Kannauj).—Ancient city in Farrukhābād District, United Provinces, situated in 27° 3' N. and 79° 56' E., two miles from the grand trunk road and the Campore-Achhnerā Railway, and close to the Kālī Nadī (East). The Ganges once flowed below its walls, but is now some miles away. Population (1901), 18,552. The town finds no mention in the Mahābhārata, but the legend of its foundation is given

in the Ramayana. Kustoubha, the founder, had a hundred daughters, all but the youngest of whom seemed the hermit, Vayu. In revenue he corred them and their backs became humped, whence the city was called Kinya-kubia or 'the crooked maiden. Early in the Christian era Prolemy refers to Kanaul as Kanegica. The town was included in the Gupta dominions in the fifth century, and when the Gupta empire fell to pieces it became the capital of the Mankharis, one of the petty dynasties which mose in its place. In the sixth century it suffered from war with the White Huns and their ally, the king of Malwa; but early in the seventh century it was included in the great empire of Harshavardhana in Northern India. The Chinese pilgrim, Hiven Tsiang, who visited this monarch and travelled with him from Allahibad to Kanauj, describes the magnificence of his court. Harshavariliana's death was the signal for anarchy, and the detailed history of the following years is unknown. In the latter half of the ninth century a dynasty of Raghuvansi kings reigned from Kanauj, which was also called Mahoriava, over an extensive dominion. One of these kings was defeated in 017 by the king of Gujarat, but restored by the Chandel king of Maholia. In 1019 Mahinad of Ghazni plundered Kananj, which now came into the power of the Rathors, the most celebrated of whom was Gobind Chand (1115-55). Nearly 200 years later, in 1194, Muhammad Chorl defeated Jai Chand, the last of the Rathor kings, and the great kingdom of Kamuj came to an end. Under the Mulammadans Kanauj became the seat of a governor, but lost its old importance. In the fiftgenth century it was included for some years in the Sharki kingdom of Jaunpur; and when Mahmud, son of Firoz Tughlak, lost his hold on Delhi, he resided here for a time. It was close to Kanauj, though across the Gauges in Hardot District, that Humayun was defeated by Sher Shah. Under Akbar, when order had once been restored, Kanauj entered on a long period of peace, and it is recorded in the Ain-i-Akkari as the head-quarters of a sarkār. During the eighteenth century it belonged sometimes to the Nawahs of Farrukhāb'id, again to the Nawabs of Oudh, and at times to the Marathas. The town or kingdom of Kanauj has given its name to an important division of Brahmans, and to many subdivisions of lower castes. Of the Hindu buildings which quest have graced the place, nothing remains intact. The fine Jama Masjid, built in 1406 by Ibrāhīm Shāh of Jaunpur, was constructed from Hindu temples, and the site is still known

to Hindus as Sitā kā rasoi, or 'Sītā's kitchen.' There are many tombs and shrines in the neighbourhood, the most notable being those of Makhdum Jahaniya south-east of the town, and of Makhdum Akhai Tamshid three miles away, both dating from the fifteenth century. The most conspicuous buildings me, however, the tombs of Bala Pir and his son, Shakh Mahdi, religious teachers who flourished under Shah Jahan and Aurangreb. The neighbourhood for miles along the river is studded with ruins, which have not been explored. The town lies on the edge of the old high bank of the Ganges, and, but for the high mounds and buildings described above, is not distinguishable from many towns of similar size. The houses are fairly well built but small, and the most conspicuous modern building is a fine sarai recently completed. The dispensary, tahsili, and munsifi are at Sarai Mīrān, two miles south of Kanauj. The town is administered under Act XX of 1856, with an income of about Rs. 4,000. It is famous for its scent distilleries, where rose-water, otto of roses, and other perfumes are produced, which have a great reputation. Calico-printing is also carried on, but is not so important an industry here as in Farrukhābād city. There was formerly a small manufacture of country paper, and a cotton gin has been worked at intervals in the last few years. The town school has 113 pupils and two primary schools 96. There is also a flourishing aided school, housed in a fine building.

Sankīsā.—Village in the District and tahsīl of Farrukhabad, United Provinces, situated in 27° 20' N. and 79° 16' E., near the Käli Nadi (East). Population (1901), 951. The village is also called Sankīsā Basantpur, and is chiefly celebrated for the rains situated in it. These were identified by Cunningham with the site of the capital of the country called Sankasya by Fa Hian and Kapitha by Hiven Tsiang. This town was said to be the place at which Gautama Buddha descended from heaven, accompanied by Indra and Brahma. The identification depends chiefly on measurements and directions which are not perfectly definite, and its correctness has been doubted. The existing village is perched on a mound of ruins, locally known as 'the fort,'41 feet high, with a superficial extent of 1,500 feet by 1,000. A quarter of a mile southward is another mound, composed of solid brickwork, and surmounted by a temple dedicated to Bisari Devi. Near the temple mound Cunning-

<sup>1</sup> V. A. Swith in the Journal of the Royal Asiatic Society, 1898, p. 508, note.

ham found the capital of an ancient pillar, bearing an creet figure of an elephant, which he considered to belong to the pillar of Asoka mentioned by the Chinese pilgrims. The latter describe the pillar as summanted by a lion—a discrepancy explained away by supposing that the trunk had been broken at an early date, and the animal could not be distinguished at a height of 50 feet. Other smaller mounds containing masses of brickwork surround those mentioned, and there are the remains of an earthen rampart upwards of 31 miles in circumference. This place has been very imperfectly explored, but ancient coins and clay scals bearing the Buddhist confession of faith are frequently found here.

[Cunningham, Archaeological Survey Reports of Northern India, vol. i, p. 271, and vol. xi, p. 22.]

Shamsabad Town.—Town in the Knimganj takril of Farrakhābād District, United Provinces, situated in 23° 22' N. and 79° 28' E., on an unmetalled road 18 miles north-west of Farrukhābād, and also on a branch of the metalled road to Kninganj. Population (1901), 8,375. An old town called Khor was founded on the cliff of the Ganges three miles away, at the beginning of the thirteenth century, by a Rathor descended from Ini Chand, last king of Kanaui. About 1228 Shams-uddin Altamsh came down the Ganges, which then flowed under the cliff, and expelled the Rathors, founding Shamsabad in his own name. The Rathors returned to Khor, however, and later took Shamsabad, and often rebelled against Muhammadan rule. In the contest between Delhi and Jaunpur the Rajas of Khor or Shamsabad supported the emperor and were finally driven out by the Jaunpur kings. Only the mound where the fort stood remains of old Shumsabad, and the new town was founded about 1585. In the Mutiny of 1857 a European planter lost his life here. The place has now decayed, and is divided into scattered groups of houses by patches of cultivation. principal thoroughfare is a long payed street, with a small grain market opening into a larger market-place. Shamsabad is administered under Act XX of 1856, with an income of Trade suffered by the alignment of the about Rs. 1,200. metalled road and railway, which left the town some distance away, and the old manufacture of fine cloth has died out. There is, however, a small export of potatoes and tohacco. The town school has 177 pupils.

Tülgram ('village of tanks').—Town in the Chhibramau tahsil of Farrukhabad District, United Provinces, situated in 27° 2′ N. and 70° 30′ E., 24 miles south of Fatchgath. Population

(1901), 5,157. Talgram was the chief town of a parpana under Akbar, and from annexation to 1844 it was the headquarters of a lahsil. It is administered under Act XX of 1856, with an income of Rs. 600. Trade is local. There are two schools with 150 pupils.

Tirwa Town.—Head-quarters of the taksil of the same name in Farrukhābād District, United Provinces, situated in 26° 58' N. and 79° 48' E., 25 miles south-east of Fateligarh. Population (1901), 5,763. The town is in two portions, threequarters of a mile apart, Tirwa proper being the agricultural, and Gani Tirwa the business and official quarter. The former contains a fine castle, the residence of the Raia of Titwa, who has a large estate in the neighbourhood. Attached to the fort are a handsome tank and temple constructed by a former Raja. Gani Tirua is administered under Act XX of 1856, with an income of about Rs. 900. It has a flourishing local trade, and contains the taksifi and a dispensary. Two schools are attended by 152 oupils.

Bounfiguration, and river s) stem.

Mainpuri District.—District in the Agra Division, United daries, con- Provinces, lying between 26° 53' and 27° 31' N. and 78° 27' and 70° 26' E., with an area of 1,675 square miles. It is bounded on the north by Etah; on the east by Farrukhābād; on the south by Etawah and Agra; and on the west by Agra and Etah. The whole District forms a level plain, and variations in its physical features are chiefly due to the rivers which flow across it or along its boundaries, generally from north-west to south-east. Junina, which forms part of the southern boundary, is Iringed by deep ravines, extending two miles from the river, incapable of cultivation, but affording good pasturage for cattle, as well as safe retreats for the lawless herdsmen or Ahirs. North-east flow, in succession, the Sirsä, the Aganga, the Sengar, the Arind or Rind, the Isan, and the Kālī Nadī (East), which last forms the greater part of the northern boundary. A well-defined sandy ridge lies in the west of the District, and a range of sandhills follows the course of the Kali Nadi, a little inland. Shallow lakes or marshes abound over the whole area, but are most common in the central table-land, in which are many large stretches of harren soil called asar.

Geology.

The soil consists entirely of Gangetic alluvium: but kankar is abundant, both in nodular and block form. Saline efflorescences occur in many parts.

Botany.

The flora presents no peculiarities. The District is well wooded, and extensive groves of mango and shisham (Dalbergia Sissoo) abound. The great dhak jungles (Butea frondosa) which formerly studded the District have been largely out away. Bobiel (Aoreio grabics) is common. The weed faisuri (Pluchea lanceolata) is a post in the west, and kans (Sactharum spontaneum) is sometimes troublesome in the sandy soil to the porth-rust.

There are few wild animals in the District. Antelone occur laura. in some numbers, and nilgoi in the dhak jungles. Leonards and byenas are found in the Jumna ravines, and wolves everywhere. Pigeons, water-fowl, and quail are common. Fish are plentiful, and the right of fishing in the rivers and tanks is often valuable.

The climate of Mainpurl is that of the Dolb generally. It Climate is hot, but not excessively sultry during the summer months. fall, The annual rainfall averages at inches, and the tract near the lumna receives slightly more than the rest. Variations from year to year are considerable.

Nothing definite is known of the early history of Mainpuri, Hunn though mounds concealing ancient ruins are common. A few and places are, as usual, connected with episodes in the Mahabharata. logy. The first precise notice of the District, however, is found in the records of its Muhammadan invaders. In 1194 Räpri was made the seat of a Musalman governor, and continued to be the local head-quarters under many successive dynasties. During the vigorous rule of Sultan Bahlol (1,150-88) Mainpuri and Eniwah formed a debatable ground between the powers of Delhi and Jauppur, to both of which they supplied mercenary forces After the firm establishment of the Lodi princes, Rapri remained in their hands until the invasion of the Mughals. Mahar occupied it in 1526, and Etawah also came into his hands without a blow. Rapri was wrested from the Mughals for a while by the Afghan, Kuth Khan, son of Sher Shab, who adorned it with many noble buildings, the remains of which still exist. On the return of Humayun, the Mughals once more occupied Mainpurt. Akbar included it in the sarkars of Kansuj and Agra. The same vigorous ruler also led an expedition into the District for the purpose of suppressing the robber tribes by whom it was infested. During the long ascendancy of the line of Bahar the Musalmans made little advance in Mainpurt. A few Muhammadan families obtained possessions in the District, but a very small proportion of the natives accepted the faith of Islam. Under the successors of Akbar Rapri fell into comparative insignificance, and the surrounding country became subordinate to Ethwah.

Like the rest of the Central Doah, Mainmurt passed towards

the end of the eighteenth century into the power of the Marie that, and finally became a portion of the province of Oudh. When the region was ceded to the British by the Nawab of Oudh in 1801, Mainpuri became the head-quarters of the extensive District of Etawah. With the exception of a raid by Holkar in 1804, which was repulsed by the provincial militia, there are no events of importance to recount during the early years of British supremacy. Its unwieldy size was gradually reduced by the formation of Etah and Etawah as separate. The construction of the Ganges Canal was the only striking event between the cession and the Mutiny of

News of the massacre at Meerut reached Mainpurl on May 13; and on the 22nd, after tidings of the Aligath revolt had arrived at the station, the 9th Infantry broke into open mutiny. The few Europeans at Mainpuri gallantly defended the town till the 29th, when the arrival of the Jhansi rebels made it necessary to abandon the District entirely. The Magistrate and his party were accompanied as far as Shikohabad by the Gwalior troopers, who then refused to obey orders, but quietly rode off home without molesting their officers. The fugitives reached Agra in safety. Next day the Jhansi force attacked the town, but was beaten off by the well-disposed The District remained in the hands of the rebel Rājā of Mainpurī, who held it till the reoccupation, when he quietly surrendered himself, and order was at once restored.

The people.

There are 8 towns and 1,380 rillages. Population has fluctuated during the last thirty years. Between 1881 and 1891 excessive floods threw much land out of cultivation; but the sensons in the following decade were more favourable. The number of inhabitants at the last four enumerations was: (1872) 765,845, (1881) 801,216, (1891) 762,163, and (1901) 829,357. The density of population is below the average of the western plain. The District is divided into five talisils-Mainpuri, Bhongaon, Karhal, Shikohābād, and Mustafābādthe head-quarters of which (except that of Mustafabad, which is at Jasrana) are at places of the same names. The principal town is the municipality of Mainruni. The table on the next page gives the chief statistics of population in 1901.

About 93 per cent, of the population are Hindus, and less than 6 per cent. Musalmans, a very low proportion for the United Provinces. Western Hindi is spoken almost universally, the prevailing dialect being Bral.

The most numerous Hindu castes are Ahirs (graziers and

Castes and

cultivators), 143,000; Chamilis (tanners and labourers), 107,000; reconstitues, 68,000; Inchmans, 68,000; and Rijputs, tiens, 68,000. Among Musalmäns the chief tribes or castes are Shaikhs, 8,100; Pathäns, 6,600; Fakirs, 5,700; and Behnas (cutton-carders), 5,200. Agriculture supports 70 per cent, of the population, a high proportion; general labour 6 per cent, and personal service 6 per cent.

There were only 308 native Christians in 1901, of whom Christian 196 were Methodists and 45 Presbytetians. The American missions. Presbyterian Church commenced work here in 1843.

The District is divided by its rivers into three tracts of General varying qualities. On the north-east the area between the Isan agreatural cand the Käll Nadi is composed of light sandy soil called bhir, ditton, with here and there loam, especially near the west, where these two rivers are farthest apart. Between the Isan and Sirsä luss the garden of the District, a rich tract of fertile loam, interspersed with many shallow lakes, patches of barren wirer land, and occasional jungle. The third tract, commencing a little south of the Sengar, has some sandy stretches, but is much better than the north-eastern tract, and as far as the Sirsä it is little inferior to the central tract. South of the Sirsä the soil deteriorates; there are no jälls and no war; the land is not so rich, and irrigation is scantier, the water-level sinking rapidly as the Jumna ravines are approached.

The District contains the usual tenures of the Provinces, Chief but carrindari and pattidari are more common than bheirid agricultural state that and the Raja of Mainnual, which is described separately, principal the main agricultural statistics are given on the next page, in square miles.

The chief food-crops, with the area under each (in square miles), are: wheat (220), jouar (222), barley (110), bajra

(100), and gram (90). Poppy and colton are the most important non-food crops, covering 28 and 39 square miles respectively.

	Total	1,675	926	719	208	

NOTE.—These figures are for various years from 1900 to 1903, fater figures not being available.

Improvements in agricultural practice. No improvements can be noted in agricultural practice except the increase in the area double cropped, and in the area under wheat, maize, and poppy. A steady demand exists for advances under the Agriculturists' and Land Improvement Loans Acts, which aggregated 1-3 lakhs during the ten years ending 1900. One-third of this sum was advanced in the famine year 1896-7. The loans in 1903-4 amounted to Rs. 4,500. In the central and part of the south-western tract drainage was defective and has recently been improved, especially in the latter, where the Bhognipur branch of the Lower Ganges Canal had caused some obstruction.

Cattle, horses, sheep, and goats. The cattle are of the ordinary inferior type, though a little success has been achieved in improving the strain by imported bulls. Something has also been done to improve the breed of horses, and stallions have been kept here for many years. In 1870 an attempt was made, without success, to improve the breed of sheep. The best goats are imported from west of the Junna. Sirsāgani is the great cattle market.

Irrigation,

Mainpuri is well supplied by canal-irrigation in almost every portion, and goo square miles are commanded. In the latest years for which statistics are available, out of 719 square miles irrigated canals supplied 266. The central tract is served by the Cawnpore and Etāwah branches of the Lower Ganges Canal, which originally formed part of the Upper Ganges Canal. The tract north-east of the Isan is served by the Bewar branch, and part of that south-west of the Sengar and Sirsā by the Bhognīpur branch. The last tract is perhaps that in which irrigation is most defective. Wells supplied 396 square miles, and other sources, chiefly small streams, 57. Towards the Jumna, and in the sandy tracts, wells cannot be constructed easily.

Kankar is found abundantly in both block and nodular Minerals. form. The only other mineral product of the District is saltpetra, which is largely manufactured from saline offlorescences.

The District has few arts or manufactures. Glass hangles Ara and are made from reh. Wood-curving was once popular in many manufacparts, including a peculiar variety in which the wood is inlaid with brass or silver wire. There is one cotton gin at Shikoliabid, another was recently built at Mainpurt, and a third is working at Sirsagani. Indigo is still made in twenty-three factories, which employ about 1,000 hands.

The chief exports are wheat and other grains, oilseeds, hides, Commerce. and cotton; and the imports are salt, metals, piece-goods, sugar, tobacco, and rice. The trade is largely with Campore, but sugar comes from Rohilkhand and tobacco from Farrukhfibad. Some traffic is carried by the canal.

The East Indian Railway crosses the south-western corner, Railways and a branch line, recently constructed, connects Shikoh- and reads. abad with Mainpurl and Farrukhabad, thus traversing the District from west to east. There are 197 miles of metalled and 200 miles of unmetalled roads. The Public Works department is in charge of the former; the cost of all but 83 miles of the metalled and of all the unmetalled roads is met from Local funds. Avenues of trees are maintained on 102 miles. Few Districts in the Provinces are so well supplied with roads, and only in the south-west are communications defective. The grand trunk road passes through the north-west, with a branch to Agra through Mainpuri town, which is also connected by metalled roads with the surrounding Districts.

Mainpuri suffered severely in 1837-8, when extensive remis- l'amine. sions of revenue were necessary, but nothing more was done to relieve distress. In 1860-1 relief works were opened and 4,000 able-bodied persons worked daily, besides 4,600 who received gratuitous relief. In 1868 the situation was saved by timely min, and grain was actually exported. Distress was felt in 1877-8, especially in the south-west of the District, where canal-irrigation was not available, and relief works had to be opened. In 1896-7 prices were high, but 2,000 temporary wells were made from Government advances, besides 12,000 constructed from private capital, and distress was confined to the immigrants from Rajputana. A test work attracted only a daily average of 100 persons. The four hranches of the canal now make the District practically immune.

The ordinary District staff includes the Collector, and four District Deputy-Collectors recruited in India. There is a taksilidar at staff.

the head-quarters of each lahsil. Mainpuri is also the headquarters of an Executive Engineer in charge of a division of the Lower Ganges Canal, and of an officer of the Opium department.

Civil enme.

There are two regular Munsifs. The District and Sessions justice and Judge of Mainpuri and the Sub-Judge exercise jurisdiction also over Etawah District. Crime is of the usual nature, but outbreaks of dacoity are frequent. Cattle-theft is not uncommon, and offences against the opium law are numerous. Mainpuri has long held a bad reputation for female infanticide, and 21,082 persons were still under surveillance in 1903, by far the largest number in any District of the United Provinces.

Land re venue admints. uation.

In 1801 Mainput became the head-quarters of the District of Etawah, which then included, besides the present District. parts of Farrukhābād, Agra, Etah, and Etāwah. In 1803 large additions were made, and in 1824 four subdivisions were formed, the Mainpuri portion remaining under the Collector of Etāwah, who still resided at Mainpurt. The District began to take its present form in 1837. Early settlements were for short periods, and were based on the records of previous collections and on a system of competition, preference, however, being given to the hereditary samindars, if they came forward. The first regular settlement was made in 1839-40. when a revenue of 12.5 lakhs was fixed. This assessment was, as it turned out, excessive, owing to the failure to allow for the after-effects of the famine of 1837-8; and it was reduced in 1845-6 to 10-5 lakhs, rising gradually to 11-4 lakhs in 1850-1. The next settlement was made between 1866 and 1873. Soils were marked off on the village map by actual inspection, and the rents payable for each class of soil were The revenue assessed amounted to rather less ascertained. than half the 'assets' calculated by applying these rates, and was fixed at 12.8 lakhs. In 1877, owing to floods, mainly along the Kāli Nadi, the settlement of seventy villages was revised. Between 1883 and 1887 serious injury from floods again occurred along the Kali Nadi, and kans grass spread, while in the south the new Bhognipur branch of the canal had caused damage. The revenue was reduced by about Rs. 19,000. The present demand falls at an incidence of Rs. 1-5-0 per acre, varying from little more than 8 annas to nearly Rs. 1-12-0.1 A revision of settlement has just been completed. Collections on account of land revenue and total revenue are given on the next page, in thousands of rupecs.

			Mar.	1 <sup>6</sup> ,70-1.	szores.	tçay-t.

Besides the single municipality of Mainpart, there are seven Local wiftowns administered under Act XX of 1856. Outside these, governlocal affairs are managed by the District board, which has an income of about a lakh, chiefly derived from rates. In 1903-4 the largest item of expenditure was Rg. 81,000 on roads and buildings.

The District Superintendent of police has a force of a Police and inspectors, 83 subordinate officers, and 340 men. besides julls. 102 municipal and town police, and 1,859 rural and road police. A sub-inspector and 11 head constables are specially maintained in connexion with the surveillance of villages where female infanticide is believed to be prevalent. There are 15 police stations. The District jail contained a daily average of 293 prisoners in 1903.

Mainpuri takes a very low place in respect of literacy; in 1001 Education. only 2.1 per cent of the population (4.2 males and 6.2 females) could read and write. The number of public schools fell from 151 in 1881 to 133 in 1901, but the number of pupils rose from 4.146 to 4.851. In 1903-4 there were 153 public schools with 5.151 pupils, of whom 173 were girls, besides 82 private schools with 811 pupils. Three of the public schools are managed by Government, and most of the remainder by the District or municipal boards. In 1903-4, out of a total expenditure on education of Rs. 38,000, Local funds contributed Rs. 32,000 and fees Rs. 3,000.

There are 8 hospitals and dispensaries, with accommoda-Hospitals tion for 36 in-patients. In 1903 the number of cases and distreated was 47,000, of whom 772 were in-patients, and 1,920 operations were performed. The expenditure in the same year was Rs. 8,200, chiefly met from Local funds.

About 25,000 persons were successfully vaccinated in 1903-4. Vaccinarepresenting 30 per 1,000 of population. Vaccination is tion, compulsory only in the municipality of Mainpuri.

... M. A. McConaghey and D. M. Smeaton, Settlement Report (1875); District Gazetteer (1876, under revision).

Mainpuri Tahsil.-Central northern tahal of Mainpuri District, United Provinces, comprising the pargunas of Mainpuri, Ghiror, and Kurauli, and lying between 27° 5' and 27° 28' N. and 78" 42' and 79" 5' E. with an area of 386 square

miles. Population increased from 171,152 in 1897 to 181,180 in 1001. There are 240 villages and three towns, Mainruel (population, 19,000), the District and taksil head-quarters, being The demand for land revenue in 1903-4 was the largest. Rs. 2,24,000, and for cesses Rs. 36,000. The density of popul lation, 475 persons per square mile, is slightly below the Dis The tahul is bounded on the north by the trict average. Kali Nadi, and is also crossed by the Isan and its tributary the Kāknadiyā, and by the Arind. Near the Kali Nadi lies a considerable area of sandy soil or bhur; but most of the talett consists of fertile loam, in which some large swamps or jhils, now partly drained, and patches of usar or barren land alone break the uniformly tich cultivation. Three branches of the Lower Ganges Canal provide ample means of irrigation. 1000-1 the area under cultivation was 170 square miles, of which 152 were irrigated. Wells supply about half the urigated area, canals one-third, and tanks or jkils most of the remainder.

Bhongaon Tahsil.—Eastern tahsil of Mainpuri District, United Provinces, comprising the parganas of Bhongato, Bewar, Alipur Patti, and Kishni Nabiganj, and lying between 26° 56' and 27° 26' N. and 79° 1' and 79° 26' E., with an area of 450 square miles. Population increased from 195.368 in 1801 to 226,940 in 1901. There are 390 villages and only one town, BHONGAON (population, 5,582), the talisti headquarters. The demand for land revenue in 1903-4 was Rs. 2,86,000, and for cesses Rs. 46,000. These figures have been mised in the new settlement to Rs. 3,19,000 for revenue and Rs. 51,000 for cesses. The density of population, 494 persons per square mile, is above the District average. On the north the talist is bounded by the Kall Nadi, while the rivers Isan and Arind cross at from north-west to south-east. It contains a large proportion of sandy soil or bhur, especially near the Kālī Nadī, while the loam area south of the Isan includes considerable areas of barren soil or usar and large swamps. During the cycle of wet years beginning in 1883 the tract near the Kālī Nadī suffered from flooding, and kāns spread in the affected area. Ample irrigation is provided by three branches of the Lower Ganges Canal, which supply more than half the irrigated area, and by wells, which supply about onethird. In 1900-1 the area under cultivation was 260 square miles, of which 205 were irrigated. Tanks and streams supply about 20 square miles, a larger area than in any other tahsil in the District.

Karhal Tahsil .- Central southern tahul of Mainpurl District, United Provinces, comprising the farganas of Karhal and Hambhal, and lying between 26° 56' and 27° 9' N. and 18° 46' and 79° 10' E., with an area of 218 square miles. Population fell from 100,207 in 1897 to 98,398 in 1901. There are 180 villages and one town, KARHAL (population, 6,268), the head-quarters. The demand for land revenue in 1903-4 was Rs. 1,75,000, and for cesses Rs. 28,000. The density of population, 451 persons per square mile, is the lowest in the District, and this is the only tahstl which lost in population between 1891 and 1901. The Sengar, flowing from north-west to south-east, divides the talist into two parts. The eastern portion forms part of the great central loam tract, and its fertility is interrupted only by patches of barren land called usar, and great swamps from which are formed the Puraha and Ahneya streams, flowing into Etawah. Although the west is more sandy it contains no usar; this tract suffered during the scarcity of 1896-7. In 1001-2 the area under cultivation was 110 square miles, of which for were irrigated. The Etawah branch of the Lower Ganges Canal serves the tract east of the Sengar, supplying about half of the irrigated area, and wells irrigate most of the remainder.

Shikohābād Tahsīl.—South-western tahsīl of Mainpuri District, United Provinces, conterminous with the pargana of the same name, lying between 26° 53' and 27° 11' N. and 78° 29' and 78° 50' E., with an area of 204 square miles. Population increased from 140,003 in 1891 to 157,659 in 1901. are 287 villages and two towns, the larger of which is SHIKOIT-ARAD (population, 10.798), the tulsit head-quarters. demand for land revenue in 1903-4 was Rs. 2,71,000, and for cesses Rs. 44,000. The density of population, 536 persons per square mile, is the highest in the District. On the south-west the taked is bounded by the Jumna, while the Sirsa flows through the centre. The Sengar crosses the northern portion, and the Aganga rises near Shikohahad. North of the Sirsa the soil, though light, is very fertile; but south of this river it becomes sandy and continues to deteriorate till the Jumna ravines are reached. The tract south of the Sirsa is irrigated by the Bhognipur branch of the Lower Ganges Canal. When first constructed this work interfered with drainage, but cuts have been made to improve this. In 1002-x the cultivated area was 196 square miles, of which 160 were irrigated. Wells supply more than half of the irrigated area, and the canal about a third. The dry tract suffered to some extent during the scarcity of 1896-7.

Mustafabad.-North-western taksil of Mainpuri District. United Provinces, conterminous with the pargana of the same name, lying between 27° 8' and 27° 31' N. and 78° 27' and 78° 46' E., with an area of 318 square miles. Population increased from 155,253 in 1891 to 163,180 in 1901. are 265 villages and only one town, which contains less than The talisti head-quarters were formerly 5,000 inhabitants. nt Mustafabad, but were moved to Jasrana in 1808. demand for land revenue in 1903-4 was Rs. 2,90,000, and for The density of population, 512 persons cesses Rs. 46,000. per square mile, is slightly above the District average. rivers—the Arind, Sengar, and Sirsa—cross the toksil, the Sengar' having two branches known as Sengar and Senhar. A sandy ridge runs transversely from north-west to south-east, but most of the soil is a fertile loam. In the south-western half the wells are often brackish, and the weed baisuri (Pluchea lanceolata) is common. Irrigation is supplied by three branches of the Lower Ganges Canal. In 1902-3 the area under cultivation was 181 square miles, of which for were irrigated. Canals serve about one-fifth of the irrigated area, and wells supply most of the remainder.

Mainpuri Estate.—A talukdari estate in the District of the same name. United Provinces, with an area of 89 square miles. The rent-roll for 1203-4 amounted to more than a lakh, and the revenue and cesses payable to Government by the estate were Rs. 58,000. The Raja of Mainpuri is regarded as the head of the Chauhan Raiputs in the Doab. He trandescent to the renowned Prithwi Raj of Delhi, who fell before Muhammad Ghori in 1102. According to tradition, the Chauhans settled near Bhongaon early in the fourteenth century. It is probable that the Rui Pratap, mentioned by the Muhammadan historians as occupying part of this District towards the close of the fifteenth century, was a member of the family. Pratap aided Bahlol Lods in his wars with Jauppur and was confirmed in his estates. Ingat Man, ninth in descent from Pratap, founded the city of Mainpurl, which was extended in 1749 by another descendant. During the rule of the Oudh government, towards the close of the eighteenth century, the Rājā was deprived of many of the farms he had previously held; but at the cession to the British a large tract was settled with him as talukdur, the estate being sometimes known as Manchana. In 1840 it was decided that settlement should be toude with the subordinate proprietors where these existed, the helukdar receiving a certain proportion of the rental 'assets,' but being excluded from management of the villages. The Raja now receives this allowance from 133 villages, while his camindari estate comprises 75 villages. In the Mutiny Raja Tej Singh rebelled, and the estate was confiscated and conferred on his uncle Bhawani Singh, who had contested the title when Tej Singh succeeded. The present Raja, Ram Partab Singh, is a son of Bhawani Singh.

Bhongaon Town.—Head-quarters of the tahsil of the same name in Mainpuri District, United Provinces, situated in 27° 16' N. and 79° 11' E., on a branch of the East Indian Railway, and on the grand trunk road. Population (1901), 5.582. According to tradition, the town was founded by a mythical Raja Bhim, who was cured of leprosy by bathing in a pond here. It was the head-quarters of a pargana under Akbar, and a high mound marks the residence of the āmil or governor. Bhongaon is administered under Act XX of 1856, with an income of about Rs. 1,300. It has very little trade. The tahsili school has about 70 pupils.

Karhal Town.—Head-quarters of the tahsil of the same name in Mainpuri District, United Provinces, situated in 27° N. and 78° 57' E., on the road from Mainpuri town to Etawah. Population (1901), 6,268. The town contains a bazar of poor shops, but has some substantial brick-built houses. A Saiyid family, some of the members of which are reputed to have miraculous powers, resides here. The tahsilt and dispensary are the chief public buildings. Karhal is administered under Act XX of 1856, with an income of about Rs. 1,400. Trado is local. The tahsilt school has about 90 pupils.

Mainpuri Town.—Head-quarters of the District and tuhsil of the same name, United Provinces, situated in 27° 14' N. and 79° 3' E., at the junction of metalled roads from Agra, Etäwah, Etah, and Fatchgarh, and on a branch of the East Indian Railway recently opened from Shikohābād. Population (1901), 19,000. The town, which lies south of the Isan river, is made up of two parts, Mainpuri proper and Muhkamganj, lying respectively north and south of the Agra road. The former existed, according to tradition, in the days of the Pāndavis, while another fable connects an image known as Main Deo with the name. It seems to have been of no importance till the Chauhāns migrated here from Asault at dates ranging from the thirteenth to the sixteenth century, according to different

The town contains a fort, composed partly of brick and partly of mud, belonging to the Raja. Muhkamgani was founded in 1803 by Rājā Jaswant Singh. In the Mutiny the place was occupied by the Ihansi rebels, who plundered and burnt the civil station, but were beaten off when they attempted to sack the town. The Agra branch of the grand trunk mad runs through the centre and forms a wide street, lined on cither side by shops which constitute the principal bazar. Besides a talistit and dispensary, the town contains the head-quarters of the American Presbyterian Mission, a large sarai and grain market called Raikesgani, after the Collector who built it about 1849, and a fine street, called Lanegani, after another Collector. The civil station, with the District offices and jail, lies north of the Isan, which is crossed by stone bridges. Mainpuri has been a municipality since 1866. During the ten years ending 1901 the income and expenditure averaged Rs. 16,000. In 1903-4 the income was Rs. 22,000, chiefly from octrot (Rs. 16,000); and the expenditure was Rs. 25,000. Trade is mainly local, but may be expected to expand when the railway is opened. The place is noted for the production of articles of carved wood inlaid with brass wire. A steam cotton-ginning factory, recently opened, employs about 100 hands. The municipality maintains two schools and aids two others, with 352 pupils in 1904. There are also a District and talistic schools, and a Presbytcrian Mission school,

Pendhat.—Village in the Mustafābād tahsīl of Mainpuī District, United Provinces, situated in 27°21' N. and 78°36' E. 29 miles north-west of Mainpuī town. Population (1901), 2,423. It is noted for the worship of Jokhaiyā, a delty believed by the lower classes in the Doāb to have great powers. Jokhaiyā was a Bhangī, who, according to tradition, fell in the war between Prithuī Rāj of Delhi and Jai Chand of Kanauj. The shrine is visited annually by thousands of pilgrims in the hope of obtaining offspring or an easy childbirth.

Rāprī.—Village in the Shikohābād tahsīl of Mainpurī District, United Provinces, situated in 26° 58' N. and 78° 36' E., in the Jumna myines, 44 miles south-west of Mainpurl town. Population (1901), 900. The importance of Rāprī lies in its past history. Local tradition ascribes its foundation to Rao Zotāwar Scn, also known as Rāpar Sen, whose descendant fell in battle against Muhammad Ghorī in A.D. 1194. Mosques, tombs, wells, and reservoirs mark its former greatness; and several inscriptions found among the ruins have thrown much light on the local history. The most important of these dates

trom the roign of All-ud-dto Khilji. Many buildings were creeted by Sher Shah and Jahangh; and traces of the gate of one of the royal residences still exist, indicating that Rapri must at one time have been a large and prosperous town. Rapri has always been important as commanding one of the crussings of the Jumna; and a bridge of boats is maintained here, forming one of the main routes to the cattle fair at Batesar in Agra District, which is one of the largest in the United Provinces.

Shikohabad Town.—Head-quarters of the takel of the rame name in Mainpurt District, United Provinces, situated in 27° 6' N. and 76° 57' R., on the Agra branch of the grand trunk road, and 2 miles from the Shikohahad station on the East Indian Rollway. Population (1901), 10,708. The town is said to have been first colonized by a Musalman emigrant from Rapal, named Muhammad, after whom it was called Muhammadābād. The name was changed to Shikohabad in honour of Dara Shikoh. The Marathas held the place and built a fort north of the site; but during the eighteenth century it often changed hands, and belonged at different times to the lats, the Robillas, Himmat Bahadur, and Oudh. The British obtained possession in 1801 and established a cantonment south-west of the town, the garrison of which was surprised by a Maratha force under Fleury in 1802, after which the troops were moved to Mainpurl. Besides the labilit, a dispensity is situated here. The town is administered under Act XX of 1856, with an income of about Rs. 2,600. Shikohabad is celebrated for its sweetmeats and manufacture of country cloth. A steam cotton gin employed about 100 hands in 1904. The tribsili school has about 140 pupils and a girls' school as.

Sirsāganj.—Village in the Shikohābād tahst of Mainpurt District, United Provinces, situated in 27° 3' N. and 78° 43' E., 6 miles north of the Bhadan station on the East Indian Railway. Population (1901), 4,122. The village of Sirst is purely agricultural; but Sirsāganj, the market adjoining it, is the greatest centre of trade in the District. It consists of one principal street with a market-place called Raikesganj, after the Collector who improved it. Trade is chiefly in grain, cotton, and hides, and a small cotton gin has been opened. Sirsāganj is adminitered under Act XX of 1856, with an income of about Rs. 1,300. It contains a primary school with about 50 pupils.

Ethwah District (Minea or Minea).—District in the Agra Hern-Division of the United Provinces, lying between 26° 22' and darks, con-

figuration, and river system.

27° 1' N. and 78° 45' and 79° 45' E., with an area of 1,601 square miles. It is bounded on the north by Mainpuri and Farrukhābād; on the east by Cawnpore; on the south by Talaun; and on the west by the State of Cwalior and Agra District. Etawah lies entirely in the Gangetic plain, but its physical features vary considerably and are determined by the rivers which cross it. Chief of these is the Tumna, which forms part of the western boundary, and then flows across the western portion of the District to the southern boundary, where it separates Etawah from Ialaun. The area north-east of the Tumna is a level tract of extremely fertile soil, intersected. by small rivers, the Pandu, the Arind, with its tributaries the Ahneya and Puraha, and the more important Sengar, with its tributary the Sirsa. In this area the stretch of rich cultivation is interrupted by patches of barren soil called usar, and by swamps or ilūls. The banks of both the Sengar (in the lower reaches) and the Jumna are high and fissured by deep ravines, increasing in wildness and extent as the rivers flow castward. West of the Jumna the character of the country changes completely. The river Chambal forms part of the western boundary of the District, and after a winding course across part of it falls into the Jumna near the southern boundary, and south-west of it the Kuārī also divides Etāwah from the State of Gwalior. The area between the Jumna and Chambal presents, for the most part, a scene of wild desolation, which can hardly be equalled in the plains of India. In the central tract a small area of level upland is found; but in the north-west and south-east the network of ravines which borders both the rivers meets in an inextricable maze. The finest view of this desolate wilderness is obtained from the fort at Bhareh, which stands near the junction of the Chambal and Jumna, and within a few miles of the junction of the Kuari, Sind, and Pahūi. South-west of the Chambal lies a tract as inhospitable as that just described, but with ravines of a less precipitous nature.

Geology.

The District consists entirely of Gangetic alluvium, and the chief mineral product is kankar or limestone. This occurs in both nodular and block form, especially in the ravines. Reefs of kankar obstructing the navigation of the Jumpa were removed many years ago, when some interesting mammalian remains were discovered.

Bolany.

The flora is that of the plains generally. A large jungle once existed in the north-east, but has been largely cut down and cultivated, and only patches of dhak (Butea frondosa)

I Journal, Asiatic Society of Bengal, vol. ii, p. 622.

remain. The chief trees growing wild are varieties of acaria, especially the habit (chardo arabia), and the District is fairly well wooded. Near the town of Ethwah a portion of the Jumna tavines was enclosed as a fuel and fodder reverve, but this has been leased to a Cawapore tannery as a habit plantation. Elsewhere the ravines are generally covered merely with grass and thomy brushwood, or are entirely bare.

Leopards are occasionally seen in the wild tract south of Fance, the Jumna, and a tiger was shot in the Reserve in the Fisher Forest in 1902. Wolves are becoming rare, and hog are commonest near the ravines and in the jungle near the north of the District. The antelope and migai are found in the Dolb, and 'ravine deer' (gazelle) near the rivers. Duck, teal, and snipe abound in the cold season. The larger rivers contain turtles, crocodiles, and the Gangetic porpoise, besides a great variety of fish.

The climate is that of the Doah generally. From April Climate to the break of the monsoon hot west winds are usual, but the and District is regarded as healthy. The annual minfall averages 32 inches. Only slight variations occur in different parts, but the north-east receives a little more than the west. Considerable fluctuations are recorded from year to year. In 1868-9 the fall was less than 15 inches, while a year earlier it was nearly 50.

Numerous mounds still show the ancient sites of prehistoric History forts throughout the District, which long formed a main stronghold of the Meos, the Ishmuelites of the Upper Doah. In their hands it doubtless remained until after the earliest Muhammadan invasion, as none of the tribes now inhabiting its borders has any traditions which stretch back beyond the twelfth century of our era. Etawah was probably traversed both by Mahmud of Ghazni and by Kuth-ud-din on their successful expeditions against the native dynasties; but the memorials of these events are indistinct on all local details. It is clear, however, that the Hindus of Etawah succeeded on the whole in maintaining their independence against the Musalman negressors: for while some of the neighbouring Districts have a number of influential Muhammadan colonies, only a thin sprinkling of Shaikhs or Saividy can be found among the territorial families of Etawah. The Rajputs seem to have occupied the District during the twelfth century. Etawah town lies on one of the old routes through Northern India, and became the seat of a Muhammadan governor; but the histories teem with notices of raids conducted with varying

success by the Saiyid generals against the 'accursed infidels' of Etawah. The Hindu chiefs were generally able to defend their country from the invaders, though they made peace after each raid by the payment of a precarious tribute. Early in the sixteenth century Babar conquered the District, together with the rest of the Doab; and it remained in the power of the Mughals until the expulsion of Humayuv. His Afghan rival, Sher Shah, found this portion of his dominions difficult to manage, and stationed 12,000 horsemen in and near the neighbouring pargana of Hatkant (now the Bah tahail in Agai District), who dealt out such rude measures of justice as suited the circumstances of the place and the people.' Akbar included parts of Etawah in his sankars of Agra, Kanauj, Kālpī, and Erachh. But even that great administrator failed to incorporate Etawah thoroughly with the dominions of the Delhi court. Neither as proselytizers nor as settlers have the Musalmans impressed their mark so deeply here as in other Districts of the Doah. During the decline of the Mughal power, Etawah fell at first into the hands of the Marathas. The battle of Panipat dispossessed them for a while, and the District became an apanage of the Jat garrison at Agra. In 1770 the Marathas returned, and for three years they occupied the Doab afresh. But when, in 1773, Najaf Khan drove the intruders southward, the Nawab Wazīr of Oudh crossed the Ganges, and laid claim to his share of the spoil. During the anarchic struggle which closed the century, Etāwah. fell sometimes into the hands of the Marathas, and sometimes into those of the Wazīr; but at last the power of Oudh became firmly established, and was not questioned until the cession to the East India Company in 1801. Even after the British took possession many of the local chiefs maintained a position of independence, or at least of insubordination; and it was some time before the revenue officers ventured to approach them with a demand for the Government dues. Gradually, however, the turbulent landowners were reduced to obedience. and industrial organization took the place of the old predatory régime. The murderous practice of thagi had been common before the cession, but was firmly repressed by the new power. In spite of a devastating famine in 1837, which revolutionized the proprietary system by dismembering the great talukas or fiscal farms, the District steadily improved for many years under the influence of settled government. The Mutiny of 1857 interrupted for some months this progress.

News of the outbreak at Meerut reached Etawah two

days after its occurrence. Within the week, a small body of mutineers passed through the District and fired upon the authorities, upon which they were surrounded and cut down. Shortly after, another body occupied Jaswantnagar, and, although a gallant attack was made upon them by the local officials, they succeeded in holding the place. On May 22 it was thought desirable to withdraw from Etawah town; but the troops mutinied on their murch, and it was with difficulty that the officers and ladies reached Barboura. There they were joined by the first Gwalior Regiment, which, however, itself proved insubordinate on June 17. It then became necessary to abandon the District and retire to Agra. The Thansi mutineers immediately occupied Etawah, and soon passed on to Mainpurt. Meanwhile many of the native officials proved themselves steady friends of order, and communicated whenever it was possible with the Magistrate in Agra. Bands of rebels from different quarters massed through between July and December, until on Christmas Day Brigadier Walpole's column re-entered the District. Etawah station was recovered on January 6, 1858; but the rebels still held the Shergash ghat, on the main road to Bundelkhand, and the whole southwest of the District remained in their hands. During the early months of 1858 several endeavours were made to dislodge them step by step; but the local force was not sufficient to allow of any extensive operations. Indeed, it was only by very slow degrees that order was restored; and as late as December 7 a body of plunderers from Oudh, under Ffroz Shah, entered the District, burning and killing indiscriminately wherever they went. They were attacked and defeated at Harchandpur, and by the end of 1858 tranquillity was completely restored. Throughout the whole of this trying period the loyalty exhibited by the people of Ethwah themselves was very noticeable. Though mutineers were constantly marching through the District, almost all the native officials remained faithful; and many continued to guard the treasure, and even to collect revenue, in the midst of anarchy and rebellion. The principal zamindars also were loyal almost to a man,

The District is rich in ancient mounds, though none has Archaeobeen explored. Mani and Asai Khern in the Etawah takat have logy. been identified with places visited by Mahmud of Ghazni, but with doubtful accuracy (see ZAFARĀBĀD). At the latter place a number of Jain sculptures, dated between the ninth and twelfth centuries, have been discovered. Several copperplate

grants of Gobind Chand of Kanauj, dated early in the twelfth century, have been found at different places. The most striking building in the District is the Jāma Masjid at ETĀWAH TOWN, built by altering an ancient Hindu or Buddhist structure.

The people.

There are six towns and 1,474 villages. Population has increased considerably during the last thirty years. The number of inhabitants at the last four enumerations was as follows: (1872) 668,641, (1881) 722,371, (1891) 727,629, and (1901) 806,798. The District is divided into four tahsiks—Etäwah, Bharthana, Bidhūna, and Auraivā—the head-quarters of each being at a place of the same name. The principal town is the municipality of Etāwah, the administrative head-quarters of the District. The following table gives the chief statistics of population in 1901:—

Tahsīl,	Area in square miles	Tough. Z	mber of	Population	Population P. P. P. P. P. P. P. P. P. P. P. P. P.	Precentage of variation in population be- tween 1891 and 1901.	Number of persons affer to result and write
Etāwah Bharthana Bidhūna Auraiyā	426 416 433 416	2 2 3	353 300 413 408	216,142 191,141 206,183 193,333 806,798	507 439 476 465	+ 10.9	8,055 5,101 5,310 5,829

About 94 per cent. of the total are Hindus and less than 6 per cent. Musalmans, the latter proportion being the lowest in any District of the Doab. The absence of large towns and the barren area in the south-west cause a low density. The increase between 1891 and 1901 was large, as the District escaped from serious famine, and the number was augmented by immigration. Almost the whole population speak Western Hindi, the prevailing dialect being Kanaujia.

Castes and occupa-

Among Hindus the most numerous castes are Chamärs (leather-workers and labourers), 107,000; Ahīrs (graziers and cultivators), 103,000; Brāhmans, 97,000; Rājputs, 69,000; Kāchhīs (cultivators), 51,000; Lodhas (cultivators), 48,000; Baniās, 29,000; and Koris (weavers), 27,000. It has already been stated that Muhammadans form a very small part of the total. The principal tribes are Pathāns, 11,000, and Shaikhs (many of whom are descended from converted Hindus), 16,000. The agricultural population forms 70 per cent. of the total, while 7 per cent. are supported by general labour and

6 per cent. by personal services. Brähmans and Rajputs each hold about one-third of the land in proprietary right. Brähmans, Rajputs, and Ahirs occupy the largest areas as tenants; but Kāchhis and Lodhas are the best cultivators. Ahirs are the founders of many new hamiets, as they prefer to have waste land as pasturage for their cattle, and are more ready to migrate than most castes.

There were 198 native Christians in 1901, of whom 62 Christian were Presbyterians. The American Presbyterian Church has mission, had a mission here since 1863, with two out-stations.

The District contains four natural divisions affecting cultiva- General tion. The tract north-east of the Sengar is known as the packer, agricul-The soil is a rich loam, interspersed with large tracts of user dislors. and marshes or thils, and produces fine crops of wheat and sugar-cane. South-west of the Sengar, and reaching to the high ground in which the Jumna ravines begin, lies an area known as the ghar, the soil of which is a red sandy lonn. Water is at a great depth, and there are no usar plains and no italk. The extension of expal-irrigation has made this the most fertile tract in the District, and there is now little difference between it and the packar. The uplands and tavines of the Jumna are called the karkha. The uplands are similar to the ghir, but the ravines are barren. Along the Jumpa rich alluvial land is found in places where the river does not approach the high The area between the Jumns and Chambal and south-west of the Chambal, called par, is largely uncultivated. Where the ravines do not meet, the table-land is composed of good loam. The Chambal alluvium is black soil resembling the mar of Hundelkhand, and is fertile; but there is little of it. Where the ravines contain good soil, this is protected by terraces and embankments, as in the Kumaun hills.

The tenures are those usually found in the United Provinces. Chief Out of 4,282 mahals, 2,030 are held zamindāri and 1,252 spricultural statistics in the fact class of tenure is very thitics and mre. The main agricultural statistics in 1903—4 are given principal below, in square miles:—

TakılL			Total	Coltitates).	Irrigates	Cultivalde		
Etāwah Bhorthana Bidhūna Autniyā	•	*		426 416 438 416	238 201 213 111	96 103 116 82	59 56 61	
		Te	ra!	1,69,1	876	357	361	

The chief food-crops, with their area in square miles, in the same year were: wheat (179), gmm (144), jowār (93), barley (135), and bājru (150). Cotton covered 68 square miles and poppy 34.

Improvements ru agricultural practice.

There has been no extension of the cultivated area in the last thirty years. The area twice cropped has, however, nearly doubled, and is now about a fifth of the cultivated area. The cultivation of cotton and sugar has decreased, but on the other hand the area under maize and rice is higher than in 1872. In the west of the District drainage was obstructed by the milway and by the Bhognipur branch of the canal, but has been improved. Advances under the Agriculturists' Loans Act have been taken freely in adverse seasons. Thus in the wet years 1890-2, Rs. 61,000 was advanced, and in the scarcity of 1896-7 Rs. 22,000. In ordinary years the advances are usually less than Rs. 1.000. About Rs. 47,000 was advanced in 1896-7 under the Land Improvement Loans Act; but in favourable seasons very few applications are received.

Cattle, horses, sheep, and gonts, The District has no particular breed of cattle or horses. No attempts have been made to improve the indigenous strains, and the best cattle are imported. The buffaloes are, however, noted for milch purposes. Sheep and goats are reared in considerable numbers between the Jumna and Chambal, and have a considerable reputation in the Doāb. The goats, in particular, are purchased and kept to give milk.

Irrigation.

The purhār or tract north-east of the Sengar is irrigated by the Etāwah branch of the Lower Ganges Canal, and the ghār or red soil area between the Sengar and the Jumna by the Bhognīpur branch, of the same canal. In 1903-4 canals irrigated 276 square miles, wells 105, and tanks and other sources 16. Wells are most common in the pachār, and are hardly used for irrigation in the karkha or the pār area.

Minemis,

Calcareous limestone or kankar is found in many parts of the District, both in nodules and in block form. The hardest variety is obtained from the ravines, where it has been washed free from earth.

Arts and manufactures. There are very few manufactures in the District. A little cotton cloth is woven in many villages, and finer kinds were formerly made at Etāwah town. Crude glass is made at a few places, and Jaswantangar is noted for brass-work. Indigo is still made in 35 factories, employing about 1,700 hands; and 8 cotton gins, 3 of which contain presses, employ about 1,000. There is also a small sandal-oil factory at Sarai Mahajana.

Cotton, ghi, gram, and oilseeds form the principal exports. Commerce. Much of the ghi comes from the State of Gwalior, and is sent to Calcutta and Bombay, while cotton is exported to Camppore, Bombay, and Calcutta. The imports are chiefly piece-goods, metals, drugs, and spices. There was formerly considerable traffic on the Jumna, but this has now ceased. Many fairs and markets are held in the District.

The East Indian Railway passes through the centre of the Railways District from south-east to north-west; and extensions to tap and route the trade of the rich ghār tract are under consideration. There are 89 miles of metalled and 443 miles of unmetalled roads, all of which are maintained at the cost of Local funds, though the former are managed by the Public Works department. The old imperial road from Agra to Allahābād runs through the District, but very little of it has been metalled. The chief trade route is the road from Farrukhābād to Gwalior, which is metalled, and good feeder roads have been made to the principal railway stations. Avenues of trees are maintained on 305 miles.

The District has suffered repeatedly from famine. Imme-Familie, diately after the commencement of British rule, drought and hailstorms caused much distress in 1803-4. Minor famines occurred in 1813-4, 1819, and 1825-6. The great famine of 1837-8 was most severely felt, and led to the breaking up of many large estates. In 1860-1 and in 1868-9 Ethwah escaped as compared with other Districts. In 1877-8, though the rains failed almost completely, the canal commanded a large area and saved the harvest. Prices were high and relief works were spened, but famine was not severe. The famine of 1896-7 was felt in the kharka and par tracts. Relief works were necessary, and the daily number on them ruse to nearly 18,000 in February, 1897. Revenue was remitted to the extent of Rs. 59,000.

The ordinary District staff consists of a Collector, a Joint District Magistrate belonging to the Indian Civil Service, and three staff. Deputy-Collectors recruited in India. There is a tabaldar at the head-quarters of each tabal. Two Executive Engineers in charge of divisions of the Lawer Ganges Canal and an officer of the Opium department are stationed at Ethwah town.

There are two regular District Munsifs; but Etawah is in-Civil inscluded in the Civil and Sessions Judgeship of Mainpart. On the and the whole, crime is lighter than in other Districts of the Agra Division; dacoities and cattle-theft are, however, common. Female infanticide was formerly rife, but is rarely suspected now.

Land revenue administration.

A District of Etawah was formed at the cession in 1301; but it included large areas now in adjoining Districts, and was ndministered from Mainpuri. Many changes took place, and in 1824 four subdivisions were formed. In 1840 the District took its present shape. The first settlement of 1801-2 was based on the accounts of the celebrated Almas Ali Khan, an officer of the Oudh government, and it was followed by other short-term settlements lasting three to five years. The demand at each of these was based on the previous demand, and on general considerations, such as the area under cultivation and the ease or difficulty with which collections were made. A large part of the District was held on talukdari tenures; but many of the talukdars gave much trouble to the administration, and some of them were forcibly ejected after open rebellion. The early settlements were oppressive, and cultivation decreased and tenants emigrated. The famine of 1837-8 completed the ruin of the talukdars, whose estates were settled with the resident cultivators. Operations were commenced on a more systematic principle under Regulation VII of 1822; but progress was extremely slow, and when the first regular settlement was begun in 1833 by Mr. (afterwards Lord) John Lawrence under Regulation IX of 1833, 100 villages had not been settled. The demand fixed in 1841 amounted to 13-1 lakhs, and was a reduction of over 10 per cent, on the previous demand. The next revision was made between 1868 and 1874. The land of each village was classified according to its soil, and suitable rent rates for each class of soil were assumed. These rates were selected from rents actually paid, and the 'assets' of each village were calculated from them. The recorded 'assets' were rejected, partly as being incorrect, and partly because rents had not been enhanced as much as it was thought they might have been. The new revenue was fixed at 13.3 lakhs, which represented so per cent. of the assumed 'assets,' At present the demand falls at an incidence of Rs. 1-7-0 per acre, varying from Rs. 1-6-0 to Rs. 1-0-0 in different parts of the District. It was expected that the actual 'assets' would rise to the assumed 'assets' within fifteen years. The question of a revision was considered in 1900, when it was decided that the settlement should be extended for a further ten years, as no increase of revenue was expected, and the existing demand was not so unequal as to require redistribution.

Collections on account of land revenue and total revenue are given on the next page, in thousands of rupees.

Local self- The only municipality is that of Etawah, but five smaller

towns are administered under Act XX of 1856. Outside these, govern-local affairs are managed by the District board, which had ment. an expenditure of 1.4 lakhs in 1903-4, of which Rs. 64,000 was spent on roads and buildings.

	1880-t.	1890-1.	1900-1.	1903-4-
Land revenue . Total revenue .	13,28	13,34	13,30	13,23
	14,66	18,24	19,08	19,18

The District Superintendent of police has a force of 4 Police and inspectors, 85 subordinate officers, and 344 men, besides jalls.

135 municipal and town police, and 1,500 village and road police. There are 19 police stations. The District jail contained a daily average of 231 prisoners in 1903.

Education is not very advanced. Only 3 per cent. of the Education. population (5 males and 0.3 females) could read and write in 1901. The number of public schools fell from 147 in 1880-1 to 119 in 1900-1; but the number of pupils rose from 3,809 to 5,096. In 1903-4 there were 160 public schools with 6,447 pupils, of whom 294 were girls, besides 114 private schools with 1,214 pupils. Of the public schools, 3 are managed by Government and 107 by the District and municipal boards, the rest being under private management. The total expenditure on education was Rs. 45,000, of which Rs. 31,000 was derived from Local funds, and Rs. 9,000 from fees.

There are 8 hospitals and dispensaries, with accommodation Hospitals for 75 in-patients. The number of cases treated in 1903 was and dispensaries, 45,000, of whom 602 were in-patients, and 2,700 operations were performed. The expenditure was Rs. 11,000, chiefly met from Local funds.

About 25,000 persons were successfully vaccinated in 1903-4, Vaccinate representing a proportion of 31 per 1,000 of the population. tion. Vaccination is compulsory only in the municipality.

[C. H. T. Crosthwaite and W. E. Neale, Settlement Report (1875); District Gazetteer (1876, under revision).]

Etawah Tahsil.—North-western tahsil of Etawah District, United Provinces, conterminous with the pargana of the same name, lying between 26° 38' and 27° 1' N. and 78° 45' and 79° 13' E., with an area of 426 square miles. Population increased from 128,023 in 1891 to 216,742 in 1901. There are 353 villages and two towns: Etawah (population, 42,570), the tahsil head-quarters, and Jaswantnagar (5,405). The demand for land revenue in 1903-4 was Rs. 3,18,000, and for cesses Rs. 51,000. The density of population, 507 persons per square

mile, is a little above the District average. The talist contains portions of the four natural tracts found in the District. Northeast of the Sengar river lies the pathār, a fertile loam tract which, however, contains marshes and patches of barren land or ūsar. A tract called ghār lies south of the Sengar, with a soil which, though lighter, is very fertile when irrigated. The Jumna ravines, known as harkha, and the area between the Jumna and Chambal, called pār, are generally barren and there is little alluvial land. In 1903-4 the area under cultivation was 221 square miles, of which 96 were irrigated. The Etāwah and Bhognīpur branches of the Lower Ganges Canal supply more than half the irrigated area, and wells most of the remainder.

Bharthana.—Central talist of Etawah District, United Provinces, conterminous with the pargana of the same name, lying between 26° 30' and 26° 50' N. and 78° 59' and 79° 21' E., with an area of 416 square miles. Population increased from 169,079 in 1891 to 191,141 in 1901. There are 300 villages and two small towns: Lakhna (population, 3,771) and Aheripur (3,144). The demand for land revenue in 1903-4 was Rs. 3,07,000, and for cesses Rs. 51,000. The density of population, 459 persons per square mile, is slightly below the District average. The tahsīl is divided by the rivers Sengar, Jumna, and Chambal into four tracts. North of the Sengar lies a fertile area called pachar, intersected by two smaller streams, and containing some large areas of barren land and marshes. Irrigation is provided by the Etawah branch of the Lower Ganges Canal. South of this river the soil is red in colour and sandy in nature. Owing to the depth of the spring-level, irrigation was formerly difficult; but the Bhognipur branch of the Lower Ganges Canal now serves this area, which is called phar. The tract bordering on the Tumna, called kurkha, and the area south of it, known as par, are intersected by ravines, but have a fair area of alluvial soil, or kachhar, on the banks of the river. In 1903-4 the area under cultivation was 213 square miles. of which 103 were irrigated. Canals supply six-sevenths of the irrigated area, and wells most of the rest.

Bidhūna.—North-eastern talist of Etāwah District, United Provinces, conterminous with the pargana of the same name, lying between 26° 38° and 26° 57′ N. and 79° 20′ and 79° 45′ E., with an area of 433 square miles. Population increased from 187,530 in 1891 to 206,182 in 1901. There are 413 villages, but no town. The demand for land revenue in 1903-4 was Rs. 3,68,000, and for cesses Rs. 60,000. The density of

population, 476 persons per square mile, is almost exactly equal to the District average. The tahul lies north of the river Sengar, and consists of a fertile area of rich soil, interrupted only by marshes and patches of barren land. On the north it is crossed by the Panda; and two small streams, the Puraha and Ahneya, unite and then join the Arind, which also flows across it. This is the most fertile tahul in the District. In 1903-4 the area under cultivation was 204 square miles, of which 116 were irrigated. A distributary of the Campore branch of the Lower Ganges Canal supplies the north of the tahul, and the Etäwah branch of the same canal the southern portion. Canals serve nearly half the irrigated area, and wells most of the remainder.

. Auralya Tahest. - Taket of Ecanab District, United Provinces, conterminous with the forgona of the same name, lying between 26° 22' and 26° 41' N. and 79° 3' and 79° 39' E., with an area of 416 square miles. Population increased from 172,097 in 1891 to 193,333 in 1901. There are 408 villages and two towns: Phaphund (population, 7,605) and Auxaivā (7,393), the taksil head-quarters. The demand for land revenue in 1903-4 was Rs. 3,31,000, and for cesses. Rs. 53,000. The density of population, 465 persons per agence raile, is a little below the District average. The talist is divided into four tracts by the rivers Sengar, Jumna, and Chambal. Most of it is included in the ghar, an area lying between the Sengar and Jumna. This has a light sandy soil, which is, however, fertile where irrigated. and it is crossed by the Bhognipur branch of the Lower Ganges Canal. North of the Sengar the land is richer and is irrigated chiefly from wells. The high land bordering on the Jumna is intersected by ravines and is generally barren, while south of the Jumpa the soil is poor and gravelly, except near the rivers, where some good alluvial land is found. In 1903-4 the area under cultivation was 238 square miles, of which 82 were inigated, almost entirely from canals.

Auralyh Town.—Head-quarters of the lahil of the same name in Ethwah District, United Provinces, situated in 26° 28' N. and 79° 31' E., 42 miles from Ethwah town. It lies on the old imperial road from Agra to Aliahhbhd, at the point where this is crossed by the metalled road from Jahan to Dehihpur Phaphand station on the East Indian Railway. Population (1901), 7,393. The town is said to have been founded early in the sixteenth century, and contains some Hindu temples dating from a little later, and two mosques built by a Robitla governor in the eighteenth century. It also possesses some

good sarais, a fine market-place called Humeganj, after a former Collector, and a dispensary. It is administered under Act XX of 1856, with an income of about Rs. 2,500. Trade is increasing, especially with Gwalior and Jālaun, and the bazar has recently been extended towards the south. There is one cotton gin, employing 200 hands in 1903, and a second was completed at the end of that year. The town school has about 200 pupils, and an aided primary school 25.

Etawah Town.—Head-quarters of the District and tahsil of the same name in the United Provinces, situated in 26° 46' N. and 70° 1' E., on the East Indian Railway, and at the junction of the road from Farrukhābād to Gwalior with the old imperial road from Agra to Allahabad. Population (190x), 42,570. of whom 28,544 are Hindus and 12,742 Musalmans. The city dates back to a period before the Musalman conquest, but nothing is known of its early history. It became the seat of a Muhammadan governor, and was repeatedly attacked and plundered in the troublous times after the death of Firoz Shah Tughlak, when its Hindu chief raised the standard of revolt. Under Akbar it was the chief town of a pargana and is mentioned in the Ain-i-Akbari as possessing a brick fort. A century later Etāwah was famous as a banking and commercial centre; but in the eighteenth century it suffered much from Rohilla and afterwards from Maratha raids. For its later history and events of the Mutiny, see ETAWAH DISTRICT. The Jama Masjid is a fine building constructed from a Hindu temple, with a massive front or propylon resembling those of the great mosques at Jaunpur. There are also some fine Hindu temples and bathing ghats, and a great mound with a ruined fort. The town is situated among the ravines of the Tumna, to the banks of which the suburbs extend. Humeganj, a handsome square, called after a former Collector, Mr. A. O. Hume, C.B., contains the public buildings and forms the centre of the city. It includes a market-place, talisili, mission-house, police station, and male and female hospitals. The Hume High School, built chiefly by private subscriptions, and one of the first to be founded in the United Provinces, is a handsome building. The north and south sides of the square form the principal grain and cotton markets? The civil station lies about half a mile north of the town. Besides the ordinary District staff, two Executive Engineers and an officer of the Opium department have their head-quarters here. Etawah is also the chief station of the American Presbyterian Mission in the District. The municipality was constituted in 1864. During the ten years ending 1901, the income averaged Rs. 37,000 and the expenditure Rs. 36,000. In 1903-4 the income was Rs. 55,000, chiefly from octroi (Rs. 41,000); and the expenditure was Rs. 59,000. There are no important manufactures, but cotton cloth is woven, and the town is noted for a special sweetmeat. In 1903 seven cotton gins and presses employed 805 hands. Trade consists largely in the export of ghi, gram, cotton, and oilseeds. The municipality maintains four schools and aids eight others, with a total attendance of 814 pupils in 1904.

Jaswantnagar.—Town in the District and tahsil of Etawah. United Provinces, situated in 26° 53' N. and 78° 53' E., on the East Indian Railway. Population (1901), 5,405. The town is named after Jaswant Rai, a Käyasth from Mainpuri, who settled here in 1715. A small Hindu temple west of the town was occupied on May 19, 1857, by mutineers of the 3rd Native Cavalry; during a bold attempt to dislodge them, the Joint Magistrate was wounded in the face. The town was once a municipality, but is now administered under Act XX of 1856, with an income of about Rs. 1,800. is a considerable trade in yarn, cattle, country produce, and English piece-goods, besides an export of ghi and of khārua cloth, which is largely manufactured. Ornamental brassware is also made here, articles for religious use by Hindus being chiefly produced. The town school has about 115 pupils, and there is a branch of the American Presbyterian Mission.

Phaphūnd.—Town in the Aumiyā tahsīl of Etāwah District, United Provinces, situated in 26° 36' N. and 79° 28' E. 36 miles south-east of Etāwah town. Population (1901), 7,605. The town was a place of some importance before British rule, but it declined during the eighteenth century. It was formerly the head-quarters of a tahsīl, and is still the residence of a Munsif, and contains a dispensary. The tomb and mosque of a celebrated saint, Shāh Bukhārī, who died in 1549, attract about 10,000 pilgrims annually. Phaphūnd is administered under Act XX of 1856, with an income of about Rs. 2,000. There is little trade. The town school has about 200 pupils, and a girls' school about 30.

Etah District (Eta).—District in the Agra Division of the Boun-United Provinces, lying between 27° 18' and 28° 2' N. and 78° daries, configuration, 11' and 79° 17' E., with an area of 1,737 square miles. It is and river bounded on the north by the river Ganges, separating it from system. Budaun; on the west by Aligarh, Muttra, and Agra; on the

u.r. l. H h

south by Agra and Mainpurt; and on the east by Farrubbabad. Bordering on the Ganges lies a broad stretch of alluvial land, known as the tarai, reaching to the old high bank of the river. Below this is the stream called the Dürhiganga, or old hed of the Ganges, which had become blocked in places by spits of sand, but has been deepened and straightened by the Irrigation department, and now carries off drainage. The rest of the District is situated in the upland plain of the Doab, and its physical features depend chiefly on the rivers which cross it from north-west to south-east. The largest of these is the Kāli Nadī (East), or Kālindrī, as it is generally and more correctly called in this District. It has a deep and well-defined channel, but occasionally brings down disastrous floods. other rivers are the Isan. Arind, and Sengar (also called the Isan here), which are dry in the hot season. The central tract contains a few marshes or ihils.

Geology.

The District consists entirely of Gangetic alluvium; and kankar or calcareous limestone, and saline efflorescences on the soil, are the only minerals found.

Rotany.

The flora presents no peculiarities. Trees and groves are comparatively scarce; the mango, nīm (Melia Lisadirachta), tamarind, and jāmun (Eugenia Jambalana) are perhaps the commonest trees. The only jungle is composed of dhāk (Butea frondosa) or babūl (Acacia arabica). The reeds found in the tarai are used extensively for thatching and for making rope.

Fauna

Etab was formerly noted for sport, and hog and antelope are still fairly common. Wild cattle have now become very rare, and the improvements to the Bürhigaugā have lessened the attractions for wild-fowl. Wolves are occasionally seen, and jackals, though occurring in many patts, are comparatively rare.

Climate and ramfall. The absence of large marshes and the common occurrence of barren areas and sandy soil, together with the facilities for drainage, make the climate of Etah, except south of the Kālī Nadī, dry and healthy; but dust-storms are frequent in the hot season. In winter the cold is sometimes intense, though frost is rare. The annual rainfall for the District averages 29 inches, varying from 25 in the Jalesar tahsīt in the west, to 34 in the Alīgani tahsīt in the east.

History.

The early history of the District is altogether uncertain. Ancient mounds along the Kālī Nadī point to the presence of important towns early in the Christian era. Tradition says that Ahīrs and Bhars were followed by Rājputs, and the

District must have formed part of the kingdom of Kanauj. When that great state was conquered by Muhammadans, Etah came under Muslim rule, and was governed from Koil, Biana, or Kanauj. Patiāli, in the north of the District, was the principal town; and it was visited by Ghiyas-ud-din Balban about 1270, who chastised the lawless peasantry in the neighbourhood, and left a garrison to keep open the roads and protect caravans and merchants. Constant expeditions were required in later years, and in the fifteenth century the District suffered from the struggle between Delhi and Jaunpur, being taken and retaken by the rival armies. Bahlol Lodi died at Sakit in 1480 from wounds inflicted in a battle with the Rajputs. Under Akbar, raids against the refractory Hindus continued, and in the eighteenth century the District fell into the hands of the Bangash Nawabs of Farrukhabad; but even these never obtained a firm hold. Later it was shared between the Nawab of Oudh and the Nawab of Farrukhabad, and was acquired by the British in 1801-2, when the present area was distributed among the surrounding Districts. After many territorial changes a subdivision was formed in 1845, on account of the lawlessness of the outlying portions, which included most of the present District; and Etah became a separate charge in 1856.

The succeeding year saw the outbreak at Meerut which quickly developed into the Mutiny of 1857. As soon as the troops in garrison at Etah received intelligence of the revolt at Aligarh, the whole body left the station without any disturbance. As there was no place of strength in the town and no force with which to defend it, the Magistrate found it necessary to withdraw until the mutineers from Mainpurt and Etawah had passed through. After a gallant but unsuccessful attempt to hold Kāsgani, the whole District was abandoned on June 7, and the officers reached Agra in safety. Damar Singh, Rājā of Etah, then set himself up as an independent ruler in the south of the District. As usual, however, rival claimants appeared in various quarters; and towards the end of July the rebel Nawab of Farrukhābād took practical possession of the country for some months. On the approach of General Greathed's column from Delhi, the rebels retired, and Mr. Cocks was appointed Special Commissioner for Etah and Aligarh. The force at his disposal, however, was quite insufficient to restore order, and the rebels still continued to hold Kasgani. It was not till December 15 that Colonel Seaton's column attacked the rebels at Gangiri in Aligarh District, and after totally routing them, occupied Rasganj. By the middle of 1858 order was completely restored, and peace has not since been disturbed.

Archaeology. The District contains several ancient sites, though these have not been fully explored. Attanjī Khera and Bilsar have at different times been identified with the Pi-lo-shan-na visited by Hiuen Tsiang in the seventh century. At Bilsar were found two pillars with inscriptions of Kumāra Gupta, dated in A.D. 415-62. The village of Nūh Khera has extensive mounds containing relics of the Buddhist period, and it is still regarded by several of the gipsy tribes as their head-quarters. Patiūlī, Sarai Aghat, and Soron are other places of great antiquity, while the chief Muhammadan buildings are found at Māratira and Sakīt.

The people.

There are 18 towns and 1,466 villages in the District. Population has fluctuated considerably in the last thirty years. The number of inhabitants at the last four enumerations was as follows: (1872) 829,118, (1881) 756,523, (1891) 701,679, and (1901) 863,948. The great decrease between 1872 and 1891 was due to the deterioration of the land owing to flooding about 1884; but there is some reason to believe that the figure for 1872 was over-estimated, and it is probable that the population did not alter much between 1872 and 1881. There are four taksik—Etah, Kāsganj, Alīganj, and Jalesar—the head-quarters of each being at a place of the same name. The principal towns are the municipalities of Kāsganj, Jalesar, Soron, and Etah, the District head-quarters, and the 'notified area' of Mārahra. The following table gives the chief statistics of population in 1901:—

	ez.	Number of		g	2 4	9 5 5 5 =	- 47

Hindus form 88 per cent. of the total and Musulmans nearly 11 per cent. The density of population is about the same as that of the surrounding Districts, but the rate of

A. Cunningham, Archaeological Survey Reports, vol. i. p. 269, and vol. xl, p. 13.

J. F. Fleet, Guffa Inscriptions, p. 42.

increase between iSor and 1901 was the highest in the United Provinces. This was due to recovery after previous bad seasons due to flooding. Western Hindi is spoken by almost the entire population, the prevailing dialect being Brai.

The most numerous castes among Hindus are: Chamars Castes and (leather-workers and labourers), 114,000; Ahīrs (graziers and occupacultivators), 88,000 : Lodhas (cultivators), 88,000 ; Raiputs, 80,000; Brāhmans, 63,000; and Kāchhīs (cultivators), 62,000. The District contains several gangs of wandering tribes, such as Hābūrās and Nats. Among Muhammadans are found Shaikhs. 15,000; Pathans, 12,000; Fakirs, 7,000; and Rajputs, 6,000. The agricultural population forms nearly 69 per cent. of the total-a high proportion. Raiputs, Brahmans, and Kavasths are the principal landholders, while Raiputs, Brahmans, Lodhas, Ahirs, and Kāchhis are the chief cultivators.

Of the 4,268 native Christians in 1901, more than 3,700 were Christian Methodists. The American Methodist Mission, to which these missions. belong, is controlled from Agra, each tahsil forming a circuit. The American Presbyterian Church commenced work in the District in 1843, but has only recently appointed a minister here. There are also branches of the Church Missionary Society at Soron and Käsgani,

The District comprises three natural tracts. The tarai, General lying between the Ganges and its old high bank, south of the agricul-Burhiganga, contains rich fertile soil in its lower parts, while ditions. the higher ridges are bare sand. It is especially liable to injury from floods or from waterlogging. Between the Bürhiganga and the Kali Nadi lies an area which consists of a light sandy soil, flanked by strips of high sandy uplands near the rivers, but changing near the centre to loam and barren ūsar. This tract also has suffered much in the past from waterlogging, and, where cultivation is relaxed, from the growth of the grass called kans (Saccharum spontaneum). Along the south bank of the Kall Naul stretches another line of high sandy soil, beyond which is a rich plain of fertile loam interspersed with ūsar plains.

The tenures are those usually found in the United Provinces. Chief Out of 2,500 mahāls, about 1,500 are zamīndāri and 1,000 agriculpalliduri or bhaiyuchara, the last class being very few in tistics and number. The main agricultural statistics for 1898-91 are principal given in the table on the next page, in square miles.

The areas in square miles under the principal food-crops in the same year were: wheat (332), barley (147), bajra (140),

1 Later figures are not arailable, owing to settlement operations.

Improvements in agricul tural practice There has been some improvement in agricultural methods during the last thirty years. This has chiefly taken the form of an increase in the double cropped area. Wheat has largely taken the place of barley, and maize is more extensively grown. The cultivation of indigo largely extended at one time, but is now practically non-existent. A most important change has been the opening of the Fatehgarh branch of the Upper Ganges Canal, accompanied by the improvement of drainage throughout the District. The cultivators take advances readily under the Agriculturists' Loans Act in adverse seasons, whether wet or dry; more than  $1\frac{1}{2}$  lakhs was lent between 1891 and 1904. The amount lent under the Land Improvement Act was only Rs. 90,000, more than half of which was advanced in 1896-7.

Cattle, hores, sheep, and goals The breed of cattle is of the ordinary inferior type found throughout the Doab, but in the Jalesar taksil the animals are a little better. An attempt has been made to improve the breed of hoises and ponies, and since 1894 a Government stallion has been kept. Private persons also maintain two good stallions. The sheep and goats are inferior.

Irrigation.

In the tarm origation is usually unnecessary, though wells can be readily made when required. The rest of the District is served by the Fatchgarh and Bewar branches of the Lower Ganges Canal, and by the Campone and Etäwali branches of the Upper Ganges Canal. The main channel of the Lower Ganges Canal crosses the Kāli Nadī at Nadrai, near Kāsganj, by a magnificent aqueduct which was carried away by a flood in 1885, but has been rebuilt. Wells can be made in the whole of this tract, except in the high sandy ridges near the rivers, but are often of little use where the subsoil is sandy. In 1902-3 the total area urigated was 461 square miles, of which wells supplied 254, canals 176, tanks or 1881 and rivers 13. In dry years the rivers are used more extensively.

M.neral\*

Block kankar or calcareous limestone is found in the uplands, and the nodular form occurs in all parts of the

District. Saltpetre, salt, and sulphate of soda are found in saline efflorescences.

The chief industries carried on are cotton-weaving, sugar- Arts and refining, glass-making, and the preparation of saltpetre and manufacsulphate of soda. Cotton is woven as a hand industry all over the District. Sugar refineries conducted by native methods are found chiefly in the towns near the tarai, where sugar-cane is largely grown. About 250 factories prepare crude saltpetre, the average out-turn at each being approximately 100 maunds. There are also eight refineries, which produce an annual out-turn of nearly 8,000 maunds of refined Sulphate of soda is made at about 80 factories. each producing 200 maunds annually. In 1903 a cotton press employed 128 hands, and three cotton gins 795 hands. Five other factories have been opened since.

Etah has a considerable export trade in agricultural produce. Commerce. Cotton, wheat, barley, pulses, millet, opium, and sugar are the chief items; but saltpetre and country glass are also exported. The imports include piece-goods, metals, and salt. Most of the foreign traffic is carried by the railway, but a great deal passes by road to and from the adjacent Districts. There is a little traffic on the canal with Aligarh, Mainpuri, and Camppore. Kasgani and Jalesar are the chief trading centres. and Soron is noted as a place of pilgrimage.

The Cawnpore-Achhnera Railway crosses the District from Railways east to west. A branch line, connecting Kasgani with Soron and roads. on the Bürhigangā, meets at the latter place a branch of the Rohilkhand and Kumaun Railway, which passes across the Ganges to Budann and Barcilly. The East Indian Railway passes close to the western border of the Talesar talistl. The total length of metalled roads is 140 miles, and of unmetalled roads 488 miles. The metalled roads are all in charge of the Public Works department: but the cost of maintaining 87 miles is charged to the District board, which is also in charge of the unmetalled roads. Avenues of trees are maintained on 165 miles. The grand trunk road passes through the District from south-east to north-west, and other metalled roads lead to Agra, Muttra, Mainpuri, and to the Ganges.

The memory of the famines of 1783-4 and of 1803 long Famine. survived in this District. In 1837-8 famine was again severe, and many deaths occurred in spite of relief measures, while the prices of all gmin doubled. The next great famine occurred in 1860-1, and was known to the peasantry by the graphic title of 'seven seer famine,' as the cheapest food sold at the rate of

seven seers per rupee. In 1868-9 the District escaped from famine, though visited by drought and scarcity; and in 1877-8 canal-irrigation saved a large area of the crops, but distress was felt among the crowds of immigrants who poured in from the tracts south of the Jumna. Before the next famine of 1896-7 canal-irrigation had been largely extended, and, though relief works were opened, the numbers who came to them were small.

District staff.

The Collector is assisted by a member of the Indian Civil Service (when available) and by four Deputy-Collectors recruited in India. A tahsīldār is stationed at the head-quarters of each tahsīl.

Civil justice and crime. There are three Munsifs, and the whole District is included in the civil and criminal jurisdiction of the Judge of Aligarh, sessions cases being usually tried by the Additional Judge, Crime is very heavy in Etah, and murders, dacoities, and cattle-thefts are common, besides the more ordinary offences. Cases under the Opium and Excise Acts are also frequent. Female infanticide was formerly rife, but no portion of the population is now under surveillance.

Land revenue administration.

The nucleus of the District was formed out of the surrounding Districts in 1845, and its early fiscal history belongs to Farrukhābād, Budaun, Alīgarh, and Mainpurī. The earliest settlements after acquisition by the British were for short terms, and were based merely on a consideration of the previous demands and a rough estimate of the condition of villages. The first regular settlement under Regulation IX of 1833 was carried out in the Districts named above before Euch became a separate unit, and the revenue assessed was about 7-2 lakhs, excluding the Jalesor talisti, which was added later, A subsequent revision was made at first by various Collectors, in addition to their ordinary District work, and later by settlement officers, between 1863 and 1873. The methods' adopted varied, but agreed in selecting rates of rent for each class of soil, and valuing the 'assets' at these rates, modified by the circumstances of individual villages. The demand so fixed amounted to 0.3 lakhs. In 1879 the Julesar lahsil was transferred from Agra to this District, the revenue on which amounted to 2.0 lakhs. After heavy rainfall in 1884-6 there was great deterioration in the tarai and central tract, and a large area fell out of cultivation and became overgrown with kans (Saccharum spontaneum). By 1893 the revenue had been reduced by Rs. 57,000. The latest revision was made between 1902 and 1905. Although the revenue was slightly

raised to 12.4 lakhs, much relief has been afforded by a redistribution of the demand, which now amounts to 48 per cent. of the net 'assets.' Collections on account of land revenue and total revenue have been, in thousands of rupees:-

		1880-1.	1890-1,	1900-1.	1903-4.
Land revenue Total revenue	•	10,87	9,90 13,85	11,33	10,93 16,67

There are four municipalities—Kasganj, Jalesar, Soron, Local selfand ETAH—and one 'notified area,' MARAHRA, besides governthirteen towns administered under Act XX of 1856. Beyond the limits of these, local affairs are managed by the District board, which had an income of Rs. 96,000 in 1903-4, chiefly from rates. The expenditure on roads and buildings was Rs. 51,000.

There are 17 police stations; and the District Superintendent Police of police commands a force of 4 inspectors, 83 subordinate and jails, officers, and 322 men, besides 200 municipal and town police, and over 1,500 rural and road police. The District jail contained a daily average of 267 prisoners in 1903.

Etah takes a low place as regards literacy, and in 1901 only Education. 2.2 per cent. of the population (3.8 males and 0.2 females) could read and write. The number of public schools fell from 155 in 1880-1 to 139 in 1900-1; but the number of pupils increased from 4,306 to 4,585. In 1903-4 there were 229 public schools with 7,179 pupils, of whom 620 were girls, besides 129 private schools with 1,314 pupils. Most of the schools are primary; three are managed by Government, and 136 by the District or municipal boards. Out of a total expenditure on education of Rs. 34,000 in 1903-4, Local funds contributed Rs. 28,000 and fees Rs. 2,500.

There are 10 hospitals and dispensaries, with accommoda-Hospitals tion for 90 in-patients. In 1903 the number of cases and distreated was 76,000, of whom 800 were in-patients, and 2,600 pensaries. operations were performed. The expenditure was Rs. 11,000, chiefly met from Local funds.

About 30,000 persons were successfully vaccinated in Vaccina-1903-4, representing a proportion of 35 per 1,000 of population. tion. Vaccination is compulsory only in the municipalities.

[S. O. B. Ridsdale, Settlement Report (1874); District Gazetteer (1876, under revision).]

Etah Tahsil.—Central tahsil of Etah District, United

Provinces, comprising the parganas of Etah-Sakit, Sonhar, and Marahra, and lying between 27° 20' and 27° 47' N. and 78° 25' and 78° 56' E., with an area of 492 square miles. Population increased from 227,030 in 1891 to 259,773 in 1901. There are 463 villages and four towns, the largest of which are ETAH (population, 8,796), the District and taksil head-quarters, and MARAHRA (8,622). The demand for land revenue in 1903-4 was Rs. 4.06,000, and for cesses Rs. 66,000. The density of population, 528 persons per source mile, is above the District average. This talsil is bounded on the north and east by the Kali Nadi, while the Isan flows across the southern portion. A small alluvial tract lies on the bank of the Kālī Nadī, from which a gentle slope leads to the upland area. The edge of the slope is sandy, but most of the tahsil is a fertile area which, however, tends to become sandy in the east and is interspersed with stretches of barren usar land. Ample irrigation is afforded by the main channel of the Lower Ganges Canal and its Bewar branch, and by the Campore and Ethyah branches of the Upper Ganges Canal. The Irrigation department has done much to improve the drainage. In 1898-9 the area under cultivation was 274 square miles, of which 171 were irrigated. Wells supply more than double the area served by canals.

Kāsganj Tahsīl.—Northern tahsīl of Etah District, United Provinces, comprising the parganas of Ulai, Bilram, Pachlana, Soron, Sidhpura, Sahāwar-Karsāna, and Faizpur-Badariā, and lying between 27° 33' and 28° 2' N. and 78° 29' and 78° 59' E., with an area of 492 square miles. Population increased from 191,625 in 1891 to 265,216 in 1901. There are 468 villages and six towns, the largest of which are Kasganj (population, 19,686), the taksil head-quarters, SORON (12,175), and SAHAWAR (5,079). The demand for land revenue in 1903-4 was Rs. 2,91,000, and for cesses Rs. 44,000. The new settlement will raise the demand for revenue to Rs. 3,26,000, and for cesses to Rs. 53,000. The density of population, 539 persons per square mile, is above the District average. Population increased by nearly 28 per cent, between 1891 and 1900, a higher rate of increase than in any other taksil in the United Provinces. The tahsil is bounded on the north-east by the Ganges and on the south-west by the Kali Nadi. It thus lies entirely in the turai and in the central doab, which are the most precarious tracts in the District. Heavy rain in 1884-6 led to extensive waterlogging, and the land which fell out of cultivation was overgrown with kans (Saccharum spontaneum).

Extensive reductions of revenue were made, and, to prevent further deterioration, the drainage was improved. The Bürhigangā, which lies below the old high bank on the southern edge of the tarai, has been deepened and straightened. In 1898-9 the area under cultivation was 347 square miles, of which 108 were irrigated. The tarai is so moist that irrigation is not usually required, and the upland area is served by the Lower Ganges Canal and its Fatehgarh branch. Wells supply about half the irrigated area.

Alīganj Tahsīl.—Eastern tahsīl of Etah District, United Provinces, comprising the parganas of Azamnagar, Barna, Patiall, and Nidhpur, and lying between 27° 19' and 27° 54' N. and 78° 52' and 79° 17' E., with an area of 526 square miles. Population increased from 161,004 in 1801 to 205,560 in 1901. There are 379 villages and six towns, the largest of which is ALIGANJ (population, 5,835), the tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 2,11,000, and for cesses Rs. 38,000. The new settlement has raised the demand for revenue to Rs. 2,20,000. The density of population, 391 persons per square mile, is the lowest in the District. Ganges forms the northern boundary and the Kālī Nadī the southern, and the talisit thus lies entirely in the most precarious tract in the District. Bordering on the Ganges is a low area of alluvial land, stretching up to the old high bank of the river, below which the Bürhiganga, which has been deepened and straightened, indicates the old bed. The banks of the Ganges and Käli Nadi are both marked by sandy ridges, and where the rivers approach each other the light soil almost meets. In the east is found a considerable area of rich loam. Heavy rain causes the whole tahsil to deteriorate, and reductions of revenue were made between 1891 and 1893. In 1898-9 the area under cultivation was 287 square miles, of which 85 were irrigated. The Ganges tarai does not require irrigation as a rule; but the upland portion is served by the Fatebgarh branch of the Lower Ganges Canal. Wells supply about two-thirds of the irrigated area.

Jalesar Tahsīl.—South-western tahsīl of Etah District, United Provinces, conterminous with the pargana of the same name, lying between 27° 18' and 27° 35' N. and 78° 11' and 78° 31' E., with an area of 227 square miles. Population increased from 121,030 in 1891 to 133,399 in 1901. There are 156 villages and two towns, including JALESAR (population, 14,348), the tahsīl head-quarters. The demand for land revenue in 1903—4 was Rs. 2,76,000, and for cesses Rs. 45,000;

but under the new settlement these figures will be raised to Rs. 2,88,000 and Rs. 47,000. The density of population, 588 persons per square mile, is the highest in the District. The talstil forms an almost unbroken plain. The Rind or Arind touches the north-east corner; but the chief river is the Sengar, known in this part of its course also as the Isan. Irrigation is provided by means of the Etāwah branch of the Upper Ganges Canal. The talstil is generally fertile, but is crossed by a line of sandhills, and is interspersed with patches of barren soil or ūsar and marshes. The drainage has recently been improved. In 1898-9 the area under cultivation was 148 square miles, of which 87 were irrigated. The caual serves more than a third of the irrigated area, and wells supply most of the remainder. In dry seasons the Sengar or Isan is largely used as a source of irrigation.

Awa Estate.—A large estate situated in the Districts of Etah, Alīgarh, Mainpurī, Agra, and Muttra, United Provinces, with an area of 265 square miles. The land revenue payable to Government in 1903-4 was 3.3 lakhs, and cesses amounted to Rs. 51,000; the rent-roll was 7.3 lakhs. A small area in Muttra is revenue-free. The family annals commence in the early part of the eighteenth century, when Chaturbhuj, a Jadon Rajput, migrated from Chhata in Muttra District to Jalesar, and was employed as physician by the local governor. His son, Bijai Singh, obtained a small military command; and the family gained local influence by assisting the zamindars of adjacent villages, who were involved in pecuniary difficulties. Bakht Singh, son of Bijai Singh, was for a time in the service of Jawahir Singh, Raja of Bharatpur, and obtained a number of villages, the profits from which enabled him to enlist a troop of marauding Mewātīs. The Marāthās allowed him to build a fort at Awa. During the Maratha Wars the head of the family aided Lord Lake, and in 1803 was confirmed in the estate he held. When the Mutiny broke out in 1857 the District officer made over the parguna of Jalesar to the Rājā, and requested him to show his loyalty by maintaining Government authority. The confidence was well repaid; the Raja raised troops, attacked the insurgent villages, collected the revenue, and remitted it to Agra. The present Rājā, Balwant Singh, C.I.E., who was for some time a member of the Legislative Council of the United Provinces, takes a keen interest in the management of his estate. JALESAR is the principal town in the estate, and a cotton gin and press, with the latest machinery, have recently been opened here. The Rājā's residence is at Awa, a small

place in Etah District, 14 miles from Etah town, on a metalled road, with a population (1901) of 2,823. The fort, situated close to the town, is a formidable stronghold, built of mud and brick, and surrounded by a deep moat nearly a mile in circumference. Awa is administered under Act XX of 1856, with an income of about Rs. 900. The town contains a dispensary maintained by the Rājā, and a saltpetre refinery is situated close by. A primary school has about 100 pupils.

Aliganj Town.—Head-quarters of the taksīl of the same name in Etah District, United Provinces, situated in 27° 29' N. and 79° 11' E., 34 miles east of Etah on the road to Farrukhābād. Population (1901), 5,835. It was founded by Yakūt Khān, a eunuch in the employ of the Nawāb of Farrukhābād, who was killed in 1748 in battle with the Rohillas, and is buried here. The shops are chiefly of mud, but there are a few large brick-built houses, the residences of the wealthier traders. Alīganj contains a tahsīlī and dispensary. It was for some years a municipality, but is now administered under Act XX of 1856 with an income of about Rs. 1,500. There is a small trade in the collection of grain and cotton, which are exported from Thāna-Daryaoganj station on the Cawnpore-Achhnerā Railway, 9 miles away. The town school has 140 pupils.

Etah Town.-Head-quarters of the District and tahsil of the same name, United Provinces, situated in 27° 34' N. and 78° 41' E., on the grand trunk road, 19 miles from the Kāsgani station on the Cawnpore-Achhnerā Railway. Population (1901), 8,796. The town is said to have been founded in the fourteenth century by Sangram Singh, a Chauhan Rajput descended from Prithwi Rāi of Delhi. His descendants occupied the surrounding territory until the Mutiny, when Rājā Damar Singh rebelled. Etah derives its importance chiefly from the presence of the civil station, removed here from Patiali in 1856 on account of its more central position. principal market-place, Maynegani, which has been recently improved and enlarged and is the property of the municipality, perpetuates the name of Mr. F. O. Mayne, C.B., a former Collector. Westward lies the new town with the principal public buildings, a fine temple, school, municipal hall, taksīlī, dispensary and hospital, and the District offices. The site is low and was formerly subject to floods; but a cutting to the Isan river, effected by Mr. Mayne, partially remedied this evil, and an effective drainage scheme has been undertaken by the municipality, through the Canal department. The American

Methodist and Presbyterian Missions are both represented. Etah has been a municipality since 1865. During the ten years ending 1901 the income and expenditure averaged Rs. 12,500. In 1903-4 the income was Rs. 21,000, chiefly from octroi (Rs. 14,000); and the expenditure was Rs. 23,000. There is a good deal of road traffic through the town, and eight commudious sarais provide for this. The taksili school has about 200 pupils, and the municipality maintains one school and aids nine others with 340 pupils.

Jalesar Town.-Head-quarters of the takal of the same name in Etah District. United Provinces, situated in 27° 28' N. and 78° 10' E., on the road from Muttra to Etah town, 83 miles from the Jalesar Road station on the East Indian Railway. Population (1901), 14,348. The town consists of two parts, the fort and the lower town. The fort is said to have been erected by a Rana of Mewar in the fifteenth century; but nothing remains of the buildings except a mound on which the tahsili, munsifi, police station, and municipal hall now stand. The lower town is a collection of narrow streets and lanes, the drainage of which was very defective, but the municipality has completed an effective drainage scheme, through the Canal department. The streets are well paved and there is a dispensary. Jalesar has been a municipality since 1866. During the ten years ending 1901 the income and expenditure averaged Rs. 10,000. In 1903-4 the income was Rs. 14,000. chiefly from octroi (Rs. 11,000); and the expenditure was Rs. 13,000. There is not much trade; but cotton cloth, glass bangles, and pewter ornaments are made, and the largest saltpetre factory in the District is situated here. The Raja of Awa has opened a cotton gin, which employed 125 hands in 1903. A talistii school has about 130 pupils, and the municipality maintains two schools and aids six others with a total attendance of 331.

Kāsganj Town.—Head-quarters of the laksil of the same name in Etah District, United Provinces, situated in 27° 48' N. and 78° 39' E., on the Cawnpore-Achhnerā Railway, and also on the road from Muttra to Bareilly. A short branch railway connects Kāsganj with Soron near the Ganges, and an extension to Bareilly is under construction. This is the chief trade centre of the District, and population is increasing; (1891) 16,050, (1901) 19,686. The town is said to have been founded by Yakūt Khān, a cunuch in the service of Muhammad Khān, Nawāb of Farrukhābad. It afterwards came into the hands of Colonel James Gardner, who was in the employ of the

Marāthās, and later in British service. He raised a regiment, now known as Gardner's Horse, and acquired a large property which was dissipated by his descendants. Part of the property fell into the hands of Dilsukh Rai, once an agent to the Gardner family, and one of his descendants has built a magnificent residence near the town, Kāsgani stands on an elevated site, its drainage flowing towards the Kālī Nadī, which runs about a mile south-east of the town. A new drainage scheme has recently been completed. The town contains two fine bazars crossing each other at right angles. At the junction a fine octagonal building, consisting of shops, forms a suitable centre to the town. The chief public buildings are the town hall, dispensary, tahsili, and munsifi. There are also branches of the Church Missionary Society and the American Methodist Mission. Close to the railway station is a considerable colony of railway employés. The town was constituted a municipality in 1868. During the ten years ending 1901 the income and expenditure averaged Rs. 15,000. In 1903-4 the income was Rs. 22,000, chiefly derived from octroi (Rs. 16,000); and the expenditure was Rs. 23,000. Kāsganj is becoming an important centre for the collection and distribution of country produce, especially grain, sugar, and cotton. Sugar-refining is a growing industry, and there were two cotton gins and a cotton press which employed 788. hands in 1903, while another ginning factory was opened in The town school has about 190 pupils, and 16 other schools aided by the municipality have 420 pupils.

Mārahra (or Mārhara).—Town in the District and tahsīl of Etah, United Provinces, situated in 27° 44' N. and 78° 35' E., on the Cawnpore-Achhnera Railway. Population (1901), 8,622. The Musalman residents, who form more than half the total population, have great influence throughout the District. The name is said to be derived from the mythical destruction of a former village (mar, 'killing' and hara, 'green,' i.e. jungle). During Akbar's reign the town was the head-quarters of a dastur. In the eighteenth century it belonged to the Saiyids of Barha in Muzaffarnagar, and then passed to the Nawabs of Farrukhābād and of Oudh. The town is scattered and of poor appearance, but contains the ruins of two seventeenthcentury tombs, and another tomb and a beautiful mosque built in 1729 and 1732 respectively. There is also a dispensary. Mārahra was a municipality from 1872 to 1904, with an income and expenditure of about Rs. 5,000, chiefly derived from octroi. It has now been constituted a 'notified area,' and octroi has been abolished. The trade is entirely local, but glass bangles are made. Mārahra contains four schools with 100 pupils, and a small branch of the Aligarh College.

Sahāwar.—Town in the Kāsganj tahsīl of Etah District, United Provinces, situated in 27° 48' N. and 78° 51" E., near the Ganeshpur station on the Cawnpore-Achhnera Railway. The town was founded by Raja Population (1901), 5,079. Naurang Deo, a Chauhān Rājput, who called it Naurangābād after his own name. On being attacked by the Musalmans, the Raja fled to Sirhpura, and the inhabitants who remained were forcibly converted to Islam. Shortly afterwards Naurang, assisted by the Raja and the people of Sirhpura, expelled the Musalmans, and changed the name to Sahawar. The town is administered under Act XX of 1856, with an income of There is very little trade. The primary about Rs. 700. school has about 80 pupils.

Soron.—Town in the Kasganj tahsil of Etah District, United Provinces, situated in 27° 54' N. and 78° 45' E., on the Burhiganga, an old bed of the Ganges. It is the junction of a branch of the Cawnpore-Achbnera Railway from Kasgani with a branch of the Rohilkhand and Kumaon Railway which passes through Budaun to Bareilly. Population (1901), 12,174. Soron is a place of considerable antiquity. According to tradition it was known as Ukala-kshetra, but after the destruction of the demon, Hiranya Kasyapa, by Vishnu, in his boar incarnation, the name was changed to Sükara-kshetra (Sükar or 'wild boar'). A mound, known as the kila or fort, marks the site of the ancient town. A temple dedicated to Sita and Rama, and the tomb of a Muhammadan saint, Shaikh Jamal, stand on the mound; but large antique bricks strew the ground on all sides, and the foundations of walls may be traced throughout. temple was destroyed during the fanatical reign of Aurangzeb. but restored towards the close of the last century by a wealthy Bania, who built up the vacant interstices between the pillars with plain white-washed walls. The architectural features of the pillars resemble those of the quadrangle near the Kuth Minūr at Delhi. Numerous inscriptions by pilgrims in the temple bear date from A.D. 11691 downward. Soron lies on the old route from the foot of the hills to Hathras and Agra, and has some pretensions as a trading mart; but it is chiefly important for its religious associations and as the scene of frequent pilgrim fairs. Up to the seventeenth century the Ganges flowed in the channel now known as the Burhiganga;

<sup>1</sup> A. Cunningham, Archaeological Survey Reforts, vol. 1, p. 267.

and devout Hindus, after visiting Muttra, come on to Soron to bathe in the latter, which here forms a considerable pool, lined with handsome temples and ghāts. The pool is now fed by an irrigation channel. The most important bathing, however, takes place in the Ganges itself, 4 miles north of Soron. The road to Budaun crosses the Bürhiganga by a fine stone bridge. There are many substantial houses and fifty or sixty temples shaded by fine pipal trees, and thirty large dharmsalas or resthouses for pilgrims; some of these, exquisitely carved in Agra stone, attest the wealth and piety of pilgrims from the Native States of Gwalior and Bharatpur. The town also contains a dispensary, a municipal hall, and a branch of the Church Missionary Society. Soron has been a municipality since 1868. During the ten years ending 1901 the income and expenditure averaged Rs. 10,000. In 1903-4 the income was Rs. 15,000, chiefly derived from octroi (Rs. 8,000); and the expenditure was Rs. 20,000. The trade is largely devoted to supplying the wants of the pilgrims; but sugar-refining is increasing in importance, and a great deal of cotton yarn is spun here as a hand industry. The municipality supports two schools and aids two others with a total attendance of 243 pupils.

## BAREILLY DIVISION

Bareilly Division.-North central Division of the United Provinces, lying below the Himalayas and between 27° 35' and 20° 58' N. and 78° and 80° 27' E. It is bounded on the north by the sub-Himalayan tract of the Kumaun Division and by Nepāl; on the west and south by the Ganges, which divides it from the Meerut and Agra Divisions; and on the east by the Lucknow Division of Oudh. The RAMPUR STATE forms a wedge of territory between the Districts of Moradabad and Bareilly, and political control is exercised by the Commissioner of this Division, whose head-quarters are at Bareilly city. Population decreased between 1872 and 1881, but has increased considerably since. The numbers at the four enumerations were as follows: (1872) 5,252,325, (1881) 5,122,557, (1891) 5,344,054, and (1901) 5,479,688. The total area is 10,720 square miles, and the density of population 511 persons per square mile, compared with 445 for the Provinces as a whole. The Division is the sixth largest in area and the sixth in population in the United Provinces. In 1901 Hindus formed nearly 75 per cent. of the total, and Musalmans 24 per cent, while the other religions most largely represented were Christians (24,459, of whom 21,421 were natives), Aryas (14,993), Sikhs (3,334), and Jains (2,016). The Division includes six Districts, as shown below:--

		Area in square rulles,	Population,	Land resease and cesses for 1903-4, in thousands of rupces.
Bareilly . Bijnor . Budaun .	• •	1,580 1,791 1,987	1,090,117 779,951 1,015,753	17,47 16,63 14,98
Morādābād Shāhjahānpur Pīlībhīt	• •	2,285 1,727 1,350	1.791,993 931,535 931,535 935,074	17.38 13,40 8,39
	Total	10,720	5,479,688	88,25

The northern portions of each of these Districts, except Budaun, reach to the damp submontane area called the tarai;

and the Division generally is a fertile tract, especially noted for the production of sugar-cane. There are 65 towns and 11,403 villages. The largest towns are BAREILLY (131,208 with cantonments), Shahjahanpur (76,458 with cantonments), Morad-ĀBĀD (75,128), AMROHA (40,077), SAMBHAL (39,715), BUDAUN (39,031), PĪLĪBHĪT (33,490), CHANDAUSĪ (25,711), and NAGĪNA (21,412). The chief places of commercial importance are Bareilly, Shāhjahānpur, Morādābād, Pīlībhīt, Chandausī, and TILHAR. Sugar and grain are dealt with also in many smaller places. Although ancient sites occur in many parts of the Division, RAMNAGAR is the only one which has been even partially explored. Budaun and Sambhal were early seats of Muhammadan governors; and BAREILLY, PILIBHIT, RAMPUR, and AONLA were important centres during the Rohilla rule in the eighteenth century. (See ROHILKHAND.)

Bareilly District (Bareli) .- District in the Bareilly or Boun-Rohilkhand Division, United Provinces, lying between 28° 1' daries, configuration, and 28° 54' N. and 78° 58' and 79° 47' E., with an area and river of 1,580 square miles. It is bounded on the north by Naini system. Tal; on the east by Pilibhit and Shahjahanpur; on the south by Shahjahanpur and Budaun; and on the west by Budaun and the State of Rampur. The District of Bareilly, though lying not far from the outer ranges of the Himālayas, is a gently sloping plain, with no greater variety of surface than is caused by the shifting channels of its numerous streams. Water lies almost everywhere near the surface, giving it a verdure that recalls the rice-fields of Bengal. The most prominent physical feature is the RAMGANGA River, which traverses the southwestern portion. Its channel has a well-defined bank at first on the south, and later on the north; but except where the stream is thus confined, the khādar or lowland merges imperceptibly into the upland, and the river varies its course capriciously through a valley 4 or 5 miles wide, occasionally wandering to a still greater distance. North of the Ramganga are numerous streams running south to meet that river. The chief of these (from west to east) are the Dojora, which receives the Kichha or West Bahgul, the Deoranian, the Nakatia, and the East Bahgul, which receives the Pangaili. The Deohā forms the eastern boundary for some distance. The gentle slope of the country makes it possible to use these rivers for irrigation in the upper part of their courses. Lower down, and more especially in the east of the District, they flow below the general level and are divided by elevated watersheds of sandy plains.

484

Geology.

The District exposes nothing but alluvium, in which even hankar, or calcareous limestone, is scarce.

Botany.

The flora resembles that of the Gangetic plain generally. In the north a few forest trees are found, the semal or cotton tree (Bombax malabaricum) towering above all others. The rest of the District is dotted with fine groves of mangoes, while the jāmun (Eugenia Jambolana), shisham (Dalbergia Sissoo), tamarind, and various figs (Ficus glomerata, religiosa, infectoria, and indica) are common. Groves and villages are often surrounded by bamboos, which flourish luxuriantly. The area under trees, which is increasing, amounts to about 32 square miles.

Fauna

Leopards are frequently found in the north of the District, and wolves are common in the east. Antelope are seen in some localities, and pārha or hog deer haunt the beds of rivers. The ordinary game-birds are found abundantly, and fish are plentiful. Snakes are also very numerous.

Climate and temperature. The climate of the District is largely influenced by its proximity to the hills, Bareilly city and all the northern purgunas lying within the limits of the heavier storms. The rainy season begins earlier and continues later than in the south, and the cold season lasts longer. The north of the District is unhealthy, on account of excessive moisture and bad drinking-water. The mean temperature varies from 54° to 60° in January, and from 85° to 93° in May, the hottest month.

Rainfall.

The annual rainfall in the whole District averages nearly 44 inches; but while the south-west receives only 39, the fall amounts to nearly 47 inches in the north and exceeds 48 in the north-east. Fluctuations from year to year are considerable; in 1883 less than 19 inches was received, and in 1894 nearly 65 inches.

History.

Before the Christian era the District was included in the kingdom of Northern Panchāla; and the names are known, from coins found at Rāmnagar, of a number of kings who probably reigned in the second century B.C. These kings were connected by marriage with a dynasty ruling in the south of Allahābād, and it has been suggested they were the Sunga kings of the Purānas! A kingdom called Abīchhattra, in or near this District, was visited by Hiuen Tsiang in the seventh century A.D., and is described as flanked by mountain crags. It produced wheat and contained many woods and fountains, and the climate was soft and agreeable.

In the early Muhammadan period the tract now known as fournal, Asiatic Society of Bengul, 1897, p. 303; A. Cunningham, Coins of Ancient India.

Rohilkhand was called Katehr, and the Rajputs who inhabited it gave continual trouble. Shahāb-ud-dīn, or his general Kutbud-din, captured Bangarh in Budaun District about the year 1104; but nothing more is heard of the Muhammadans in this neighbourhood till Mahmud II made his way along the foot of the hills to the Ramganga in 1252. Fourteen years later, Balban, who succeeded him, marched to Kampil, put all the Hindus to the sword, and utterly crushed the Katehriyas, who had hitherto lived by violence and plunder. In 1200 Sultan Firoz invaded Katehr again, and brought the country into final subjection to Musalman rule, which was not afterwards disputed except by the usual local revolts. Under the various dynasties which preceded the Mughal empire, the history of Katehr consists of the common events which make up the annals of that period: constant attempts at independence on the part of the district governors, followed by barbarous suppressions on the part of the central authority. The city of Bareilly itself was founded in 1527 by Bas Deo and Barel Deo, from the latter of whom it takes its name. It was, however, of small importance till the reign of Shah Jahan, when it took the place of Budaun. In 1628 Alī Kulī Khān was governor of Bareilly, which had grown into a considerable place. In 1657 Rājā Makrand Rai founded the new city of Bareilly, cut down the forest to the west of the old town, and expelled all the Katehriyas from the neighbourhood. A succession of regular governors followed during the palmy days of the great Mughal emperors; but after the death of Aurangzeb, in 1707, when the unwieldy organization began to break asunder, the Hindus of Bareilly threw off the imperial yoke, refused their tribute, and commenced a series of anarchic quarrels among themselves for supremacy.

Their dissensions only afforded an opportunity for the rise of a new Muhammadan power. Alī Muhammad Khān, a leader of Rohilla Pathāns, defeated the governors of Bareilly and Morādābād, and made himself supreme throughout the whole Katehr region. In 1744 the Rohilla chieftain conquered Kumaun right up to Almorā; but two years later the emperor Muhammad Shāh marched against him, and Alī Muhammad was taken a prisoner to Delhi. However, the empire was too much in need of vigorous generals to make his captivity a long one, and in 1748 he was restored to his old post in Katehr. Next year he died, and a mausoleum at Aonla, in this District, still marks his burial-place. Hāfiz Rahmat Khān, guardian to his sons, succeeded to the governorship of Rohilkhand, in spite of the crafty designs of Safdar Jang of Oudh, who dispatched

the Nawāb of Farrukhābād against him without effect. Hāñz Rahmat Khān defeated and slew the Nawāb, after which he marched northward and conquered Pīlībhīt and the Tarai. The Oudh Wazīr, Safdar Jang, plundered the property of the Farrukhābād Nawāb after his death, and this led to a union of the Rohulla Afghāns with those of Farrukhābād. Ahmad Khān of Farrukhābād defeated Nawal Rai, the deputy of Safdar Jang, besieged Allahābād, and took part of Oudh; but the Wazīr called in the aid of the Marātbās, and with them defeated Ahmad Khān and the Rohillas at Fatehgarh and at Bisauli, near Aonla. He then besieged them for four months at the foot of the hills; but owing to the invasion of Ahmad Shāh Durrām terms were arranged, and Rahmat Khān became the de facto ruler of Rohilkhand.

After the accession of Shuja-ud-daula as Nawab of Oudh, Rahmat Khan joined the imperial troops in their attack upon that prince, but the Nawab bought them off with a subsidy of 5 lakhs. Rahmat Khan took advantage of the victory at Pānīpat in 1761 to make himself master of Etāwah, and during the eventful years in which Shujā-ud-daula was engaged in his struggle with the British power, he continually strengthened himself by fortifying his towns and founding new strongholds. In 1770 Naith-ud-daula advanced with the Maratha army under Sindhia and Holkar, defeated Rahmat Khān, and forced the Robillas to ask the aid of the Wazīr. Shuin-ud-daula became surety for a bond of 40 lakhs, by which the Matathas were induced to evacuate Robilkhand. This bond the Robillas were unable to meet, whereunon Shuia-ud-daula, after getting rid of the Marathas, attacked Rohilkhand with the help of a British force lent by Warren Hastings, and subjugated it by a desolating war. Rahmat Khān was slain, but Faiz-ullah, the son of Ali Muhammad, escaped to the north-west and became the leader of the Rohillas. After many negotiations be effected a treaty with Shujā-ud-daula in 1774, by which he accepted nine parganas worth 15 lakhs a year, giving up all the remainder of Robilkhand to the Wazīr (see Rāmpuk State). Saādat Alf was appointed governor of Bareilly under the Oudh government. In 1794 a revolution in Rampur State led to the dispatch of British troops, who fought the insurgents at Bhitaura or Fatehganj (West), where an obelisk still commemorates the slain. The District remained in the hands of the Wazir until 1801, when Rohilkhand, with Allahābād and Korā, was ceded to the British in lieu of tribute. Mr. Henry Wellesley, brother of the Governor-General, was appointed President of the Board of

Commissioners sitting at Bareilly, and afterwards at Farrukhābād. In 1805 Amīr Khān, the Pindāri, made an inroad into Rohilkhand, but was driven off. Disturbances occurred in 1816, in 1837, and in 1842; but the peace of the District was not seriously endangered until the Mutiny of 1857.

In that year the troops at Bareilly rose on May 31. The European officers, except three, escaped to Nainī Tāl: and Khān Bahādur, Hāfiz Rahmat Khān's grandson, was proclaimed Nawab Nazim of Robilkhand. On June 11 the mutinous soldiery went off to Delhi, and Khān Bahādur organized a government in July. Three expeditions attempted to attack Nainī Tāl, but without success. In September came news of the fall of Delhi. Walīdād Khān, the rebel leader in Bulandshahr, and the Nawab of Fatehgarh then took refuge at Bareilly. A fourth expedition against Nainī Tāl met with no greater success than the earlier attempts. On March 25, 1858, the Nāna Sāhib arrived at Bareilly on his flight from Oudh, and remained till the end of April; but the rebellion at Bareilly had been a revival of Muhammadan rule, and when the commanderin-chief marched on Jalalabad, the Nana Sahib fled back again into Oudh. On the fall of Lucknow, Firoz Shah retired to Bareilly, and took Moradabad on April 22, but was compelled to give it up at once. The Nawab of Najībābād, leader of the Bijnor rebels, joined him in the city, so that the principal insurgents were congregated together in Bareilly when the English army arrived on May 5. The city was taken on May 7, and all the chiefs fled with Khan Bahadur into Oudh.

Ahichhattra or Rāmnagar is the only one of many ancient Archaeomounds in the District which has been explored. It yielded logy. numerous coins and some Buddhist sculptures. It is still a sacred place of the Jains. The period of Rohilla rule has left few buildings of importance; but some tombs and mosques are standing at Aonla and Bareilly.

There are 12 towns and 1,924 villages. Population has The risen steadily during the last thirty years. The numbers at the people. four enumerations were as follows: (1872) 1,015,041, (1881) 1,030,936, (1891) 1,040,949, and (1901) 1,090,117. The District is divided into six tahsils—Faridpur, Barellly, Aonla, Mirganj, Baheri, and Nawabganj—the head-quarters of each being at a place of the same name. The principal towns are the municipality of Barellly and Aonla. The table on the next page gives the chief statistics of area and population in 1901.

Hindus form 75 per cent. of the total and Musalmans

24 per cent., while Christians number 7,148 and Aryns 1,228. The density is much higher than the Provincial average, and the rate of increase between 1891 and 1901 was larger than in most parts of the United Provinces. More than 99 per cent. of the population speak Western Hindi, the ordinary dialect being Braj.

Castes and occupa-

The most numerous Hindu caste is that of Chamars (leatherworkers and cultivators), 100,000. Other castes numerically strong in this District are: Kurmis (agriculturists), 04,000; Muraos (market-gardeners), 73,000; Kisāns (cultivators), 67,000; and Kahārs (cultivators and water-carriers), 56,000. Brahmans number 48,000 and Raiputs 38,000. Ahars, who are found only in Robillchand, but are closely allied to the Ahirs of the rest of the Provinces, number 46,000. Daleras (1.724), who are nominally basket-makers but in reality thieves, are not found outside this District. Among Muhammadans, Shaikhs number 54,000; Julahas (weavers), 41,000; and Pathans, 41,000. The Mewatts, who number 0,000, came from Mewar in the eighteenth century, owing to famine. Banjārās, who were formerly sutlers and are still grain-carriers. have now settled down as agriculturists, chiefly in the submontane Districts, and number 9,000 here. About 66 per cent. of the population are supported by agriculture, 6 per cent, by personal services, and a per cent. by general labour. Cottonweaving by hand supports 3.5 per cent. Rājputs, Pathāns, Brāhmans, Kāyasths, and Baniās are the largest landholders. Kurmis occupy nearly a quarter of the total area as cultivaturs, while Ahars, Kisans, and Brahmans each cultivate about 7 or 8 per cent.

Christian missions. There were 4,600 native Christians in 1901, of whom 4,488 were Methodists. The American Methodist Episcopal

Mission was opened here in 1859, and has ten stations in the District, besides a theological college at Bareilly city.

The north of the District contains a damp unhealthy tract, General where rent rates are low and population is sparse, while cultiva- agricultural contion depends largely on the season. The central portion is ditions, extremely fertile, consisting chiefly of loam, with a considerable proportion of clay in the Mīrganj and Nawābganj talsīls. In the south, watersheds of sandy soil divide the rivers; but these sandy strips are regularly cultivated in the Bareilly and Aonla talsīls, while in Farīdpur much of the light soil is very poor and liable to be thrown out of cultivation after heavy rain. The alluvial strip along the Rāmgangā is generally rich, but is occasionally ruined by a deposit of sand. Excluding garden cultivation, manure is applied only when the turn comes round for sugar-cane to be grown, at intervals of from 3 to 8 years.

The tenures are those common to the United Provinces. Chief Zamīndāri or joint zamīndāri tenures prevail in 5,547 mahāls, agricul-503 are perfect or imperfect pattīdāri, and 36 are bhaiyāchārā. tural statistics and The District is thus chiefly held by large proprietors. The principal main agricultural statistics for 1903-4 are shown below, in crops. square miles:—

77	ahsēl	·.		Total.	Cultivated	Irrigated.	Cultivable waste.
Faridpur			•	249	196	34	19
Barcilly				310	240	50	20
Aonla				ვინ	240	56	27
Mirganj				149	111	17	14
Baheri				345	258	44	31
Nawābga	nj	•	•	221	178	55	12
		To	tal	1,580	1,223	256	123

The principal food-crops, with their areas in square miles in 1903-4, are: rice (237), wheat (368), gram (201), bājra (166), and maize (115). Sugar-cane covers 71 square miles, and is one of the most important products; while poppy (23), oilseeds (27), cotton (13), and san-hemp (10), are also valuable crops.

The total cultivated area has not varied much during the Improvelast thirty years; but there has been a permanent increase to ments in agriculture west of Aonla and north of Faridpur tahsiks, which is tural counterbalanced by a temporary decrease in the north of the practice. District owing to vicissitudes of the seasons. The principal changes in cultivation have been directed towards the substitution of more valuable crops for inferior staples. The area under bājra has decreased, while sugar-cane, rice, and maize are more largely grown. Poppy has been reintroduced recently, and the area sown with it is increasing. A rise in the area producing barley and gram points to an increase in the area double cropped. Very few loans are taken under the Land Improvement Loans Act; between 1890 and 1903 the total amounted to Rs. 41,000, of which Rs. 38,000 was advanced in the famine year, 1896-7. Nearly 1½ lakits was lent under the Agriculturists' Loans Act, of which Rs. 63,000 was advanced in 1896-7. In good seasons the advances are small.

Cattle, horses, and sheep.

The cattle used for agricultural purposes are chiefly bred in the District or imported from the neighbouring submontane tracts, those bred in Pilibhīt being called panavār. These varieties are small but active, and suffice for the shallow ploughing in vogue. Stronger animals, used in the well-runs in the south-west of the District, are imported from west of the Jumna. Horse-breeding is confined to the Rāmgangā and Aril basins, where wide stretches of grass and in some places a species of Oxalis resembling clover are found. Four horse and two donkey stallions are maintained by Government and by the District board, and two donkey stallions are kept on estates under the Court of Wards to encourage mule-breeding. There has, however, been little progress in either horse or mule-breeding. Sheep are not kept to any great extent.

Irrigation.

The soil of the District is generally moist, and in ordinary seasons there is very little demand for irrigation of the spring crops. In the north, where a regular supply of water is valued for rice and sugar-cane, the Rohilkhand canals are the main source. Elsewhere, wells, rivers, and thils are used. In 1903-4 canals and wells supplied 76 and 75 square miles respectively, tanks or jhils 58, and other sources (chiefly rivers) 47. The canals are all small works and may be divided into two classes. Those drawn from the Bahgul, Kailās, Kichhā, and Paha have permanent masonry head-works, with channels dug to definite sections, and are provided with subsidiary masonry works, regulators, &c., like the regular canals of the Doab. The others are small channels, into which water is turned from the rivers by earthen dams, renewed annually. Masonry wells are not constructed for irrigation, except by the Court of Wards. In most parts of the District the wells are temporary excavations worked by pulley, or by a lever, as the spring-level is high; but in some tracts to the south water is raised in a leathern bucket by a rope pulled by bullocks or by men.

Kankar or nodular limestone is comparatively scarce and Minerals. of poor quality. A little lime is made by burning the ooze formed of lacustrine shells.

The most important industry of the District is sugar-refining. Arts and This is carried on after native methods, which are now being manufacexamined by the Agricultural department in the hope of eliminating waste. Coarse cotton cloth and cotton carpets or daris are woven largely, and Bareilly city is noted for the production of furniture. A little country glass is also manufactured. The Rohilkhand and Kumaun Railway workshops employed 8r hands in 1903, and a brewery in connexion with that at Naini Tal is under construction. The indigo industry is declining.

Grain and pulse, sugar, hides, hemp, and oilseeds are the Commerce. chief exports, while salt, piece-goods, metals, and stone and lime are imported. The grain is exported to Calcutta, while sugar is sent to the Punjab, Rajputana, and Central India. Bareilly city and Aonla are the chief centres of trade.

The main line of the Oudh and Rohilkhand Railway passes Railways through the south of the District, with a branch from Bareilly and roads. city through Aonla to Aligarh. The north is served by the Rohilkhand and Kumaun Railway, which is the only route to the hill station of Nainī Tāl, and by a line through Pilibhīt and Sitapur to Lucknow, which leaves the Rohilkhand and Kumaun Railway at Bhojupura, a few miles north of Bareilly city. Another metre-gauge line, recently opened, leads from Bareilly south-west through Budaun to Soron in Etah District.

The total length of metalled roads is 139 miles, and of unmetalled roads 186 miles. Of the former, 125 miles are in charge of the Public Works department, but the cost of all but 88 miles is met from Local funds. There are avenues of trees along 254 miles. The District is not well supplied with roads. Those which are metalled follow roughly the alignment of the railways, and there are no others, except the road from Aonla In the north communications are almost impossible during the rains; but the streams can easily be forded in the hot and cold seasons.

Bareilly is not liable to severe famine, owing to the natural Famine. moisture of the soil and the rarity of so complete failure of the rains as occurs elsewhere. It is also well served by railways, and a considerable portion can be irrigated. Ample grazinggrounds for cattle are within easy reach. In 1803-4 distress was felt, and the spring crops were grazed by the cattle as no grain had formed. In 1819 and 1825-6 there was scarcity.

The famine of 1837-8 followed a succession of bad years, and its effects were felt, but not so severely as in the Doab. While famine raged elsewhere in 1860-1, Bareilly suffered only from slight scarcity, owing to the failure of the autumn crop, and relief works, which were opened for the first time, alleviated distress. Relief works were also necessary in 1868-9, 1877-8, and 1896-7, but the numbers attracted to them never rose very high.

District

The Collector is usually assisted by a member of the Indian Civil Service, and by four Deputy-Collectors recruited in India There is a tuhsīldār at the head-quarters of each tahsīl. The Executive Engineer of the Rohilkhand division (Roads and Buildings) and the Executive Engineer of the Rohilkhand Canals are stationed at Bareilly.

Civil justice and crime. There are three regular District Munsifs and a Subordinate Judge, and the appointment of village Munsifs commenced recently. The District and Sessions Judge of Bareilly has civil and criminal jurisdiction in both Bareilly and Plithhit Districts. Crime is very heavy, especially offences affecting life and grievous hurt. Religious feeling runs high, and quarrels between Hindus and Muhammadans, accompanied by serious rioting, are not infrequent. The thieving caste of Daleras has already been mentioned. Female infanticide is now very rarely suspected, and in 1904 only 130 names remained on the registers of proclaimed families.

Land revenue administration.

Under the Rohillas proprietary rights did not exist, and villages were farmed to the highest bidder. After annexation in 1801 Rohilkhand was divided into two Districts. Morādābād and Bareilly, The Shahiahanpur District was formed in 1813-4; Budauu was carved out of both the original Districts in 1824; the south of Naini Tal District was taken away in 1858, and sixty-four villages were given, as a reward for loyalty. to the Nawab of Rampur. Pilibhit was made a separate District in 1879. In the early short-term settlements the Rohilla system of farming was maintained till 1812, when proprietary rights were conferred on persons who seemed best entitled to them. The demand then fixed was so high that heavy balances were frequent, and many estates were abandoned. A more enlightened method of settlement based on a survey was commenced under Regulation VII of 1822, and the first regular settlement followed under Regulation IX of 1833. Different methods were adopted by the officers who carried this out. Some divided each village into circles according to soil and situation, while others classified villages accord-

ing to their general condition as a whole. Rent rates were sometimes assumed for the various soils, while in other cases general revenue rates were deduced from the collections in previous years. The revenue fixed amounted to 11 lakhs on the present area. Another settlement was made in 1867-70. The rental 'assets' were calculated from rent rates selected after careful inquiry. A large area was grain-rented; and the rent rates for this tract were selected after an examination of the reputed average share of the landlord, and after experiments in the out-turn of various crops, the average prices for twenty years being applied to ascertain the cash value. The result was an assessment of 13.5 lakhs; but this was reduced by about Rs. 4,000 in 1874-6, owing to the assessment of too large an area in the north of the District, where cultivation fluctuates. The latest revision was carried out in 1898-1902. Cash rents were then found to be paid on about two-thirds of the total cultivated area, and the actual rent-roll formed the basis of assessment. Rents of occupancy tenants had remained for the most part unaltered since the previous settlement, and enhancements were given where they were inadequate. Grain rents, chiefly found in the north of the District, were largely commuted to cash rates. The demand fixed amounts to 75 lakhs, representing 45 per cent. of the net 'assets,' and the incidence falls at Rs. 1-7 per acre, varying from Rs. 1-3 to Rs. 2 in different parts. Collections on account of land revenue and total revenue have been, in thousands of rupees:-

	1880-1.	1890-1.	1900-1.	1903-4.
Land revenue . Total revenue .	13,14	12,93	15,44	14,94
	16,67	20,45	25,13	26,01

There is one municipality, BAREILLV, and ten towns are ad-Local self-ministered under Act XX of 1856. Outside of these, local governalizars are managed by the District board, which has an income of 1.7 lakhs, chiefly from rates. In 1903-4 the expenditure on roads and buildings amounted to Rs. 63,000.

There are 22 police stations and 19 outposts, all but one of Police and the latter being in Bareilly city. The District Superintendent jails. of police has under him an assistant and 4 inspectors, besides a force of 112 subordinate officers and 587 men of the regular police, 374 municipal and town police, and 1,989 village and road chaukīdārs. The Central jail, which has accommodation for more than 3,000 prisoners, contained a daily average of nearly 1,800 in 1903, while the District jail contained 715.

The latter was formerly used for convicts from Naint Tal and from Pilibhit, and is a central jail for female prisoners.

Education.

The District takes a medium place as regards the literacy of its inhabitants, of whom 2.7 per cent. (4.7 males and 0.6 females) can read and write. The number of public institutions increased from 143 in 1880-1 to 154 in 1900-1, and the number of pupils from 5,033 to 6,675. In 1903-4 there were 196 such institutions, with 9,636 pupils, of whom 996 were girls, hesides 163 private schools with 2,479 pupils. Of the total, 3 were managed by Government and 136 by the District and municipal boards, while 55 were aided. There is an Arts College at Bareilly city. In 1903-4 the total expenditure on education was a lakh, of which Rs. 53,000 was derived from Local and municipal funds, Rs. 23,000 from fees, and Rs. 12,000 from Provincial revenues.

Hospitals and dispensaries. There are 13 hospitals and dispensaries, with accommodation for 287 in-patients. In 1903 the number of cases treated was 114,000, of whom 3,068 were in-patients, and 2,815 operations were performed. The expenditure was Rs. 30,000, most of which was met from Local and municipal funds. There is a lunatic asylum at Bareilly city with about 400 inmates.

Vaccina-

In 1903-4 the number of persons successfully vaccinated was 36,000, representing a proportion of 33 per 1,000 of the population. Vaccination is compulsory only in Bateilly city.

[District Gasetteer (1879, under revision); S. H. Fremuntle, Settlement Report (1903).]

Faridpur Tahsil.—South eastern talisit of Bareilly District, United Provinces, conterminous with the pargana of the same name, lying between 28° 1' and 28° 22' N. and 70° 23' and 70° 45 E., with an area of 240 square miles. Population increased from 119,805 in 1891 to 128,861 in 1901. There are 314 villages and two towns, including Faringur (population, 6,635), the tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 1,84,000, and for cesses Rs. 30,000. density of population, 518 persons per square mile, is the lowest in the District. On the south-west the Ramganga river divides the talisis from Budaun, while the East Bahgul crosses it from north to south. Faridpur is the most unproductive part of the District, consisting for the most part of plateaux of light siliceous soil, undulating into gleaming sandy ridges, which sometimes present the appearance of low hills. In seasons of favourable rainfall such soil often produces a good autumn crop, but a series of years of heavy rain throws it temporarily out of cultivation. The basins of the rivers are more fertile,

both naturally and because irrigation is easier. In 1903-4 the area under cultivation was 196 square miles, of which 34 were irrigated. Wells supply more than half the irrigated area, tanks or *jhils* about a quarter, and rivers the remainder.

Bareilly Tahsil.—Central talisil of Bareilly District, United Provinces, conterminous with the pargana of Karor or Bareilly, lying between 28° 13' and 28° 37' N. and 79° 14' and 79° 38' E., with an area of 310 square miles. Population increased from 298,482 in 1891 to 325,650 in 1901. There are 414 villages and one town, BAREILLY (population, 131,208), the District and taksil head-quarters. The demand for land revenue in 1903-4 was Rs. 2,71,000, and for cesses Rs. 48,000. The high density of population, 1,050 persons per square mile, is due to the inclusion of a large city. There is some poor soil, but the tract across which the Ramganga flows in a constantly varying channel is generally fertile. Five smaller streams flow from north to south and are used for irrigation. Sugar-cane is the most valuable crop, and is largely grown, while sugar is refined at many places, especially in Bareilly city. In 1903-4 the area under cultivation was 240 square miles, of which 50 were irrigated. Small canals drawn from the East Bahgul river irrigate 6 or 7 square miles, and wells 15 or 20. Tanks or jhils and rivers supply the remainder.

Aonla Tahsil.—South-western tahsil of Bareilly District, United Provinces, comprising the parganas of Aonla, Ballia, Sanehā, and Siraulī (South), and lying between 28° 10' and 28° 31' N. and 78° 58' and 79° 26' E., with an area of 306 square miles. Population increased from 195,950 in 1891 to 211,836 in 1901. There are 320 villages and three towns, including AONLA (population, 14,383), the tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 2,75,000, and for cesses Rs. 46,000. The density of population, 692 persons per square mile, is almost exactly the District average. On the north and east the Ramganga flows in a shifting channel, and its tributary, the Aril, crosses the south-west portion. The alluvial tract bordering on the larger river contains good grazing and is very fertile, except where a deposit of sand has been left by floods. A gentle slope leads to the uplands, watered by wells and by the Aril, which is dammed at intervals for the purpose. To the south are found a large usar plain and a stretch of dhak jungle, and in the north-east the soil is sandy. In 1903-4 the area under cultivation was 240 square miles, of which 56 were irrigated. Rivers and wells each supply about two-fifths of the irrigated area, and tanks or ihils the remainder.

Mirgani.—West central tahsil of Barcilly District, United Provinces, comprising the pargunas of Shahi, Sirauli (North), and Ajaon, and lying between 28° 24' and 28° 41' N. and 79° 6' and 79° 24' E., with an area of 149 square miles. Population increased from 95,300 in 1891 to 103,198 in 1901. There are 158 villages and one town, Shahi (population, 3,556). demand for land revenue in 1903-4 was Rs. 1,50,000, and for cesses Rs. 26,000. The density of population, 640 persons per square mile, is below the District average. The shifting channel of the Ramganga winds through the south of the lalisil, and the Dhakra, Dhora, and West Babgul, after flowing from the northern border, unite to form the Dojora. Mirgari is a level well-cultivated plain, the greater portion of which is sufficiently moist not to require artificial irrigation. It produces sugar-cane largely, and sugar is refined in many places. In 1903-4 the area under cultivation was 111 square miles, of which 17 were irrigated. Tanks or jills supply more than half the irrigated The new dam across the Küli Nadi will supply irrigation to the north of this taksil.

Baherī.—Northern tahsīl of Bareilly District, United Provinces, comprising the parganas of Sirsāwān, Kābar, Chaumahla, and Richhā, and lying between 28° 35' and 28° 54' N. and 79° 16' and 79° 41' E., with an area of 345 square miles. Population fell from 207,063 in 1891 to 193,412 in 1901. There are 410 villages and two small towns, neither of which has a population of 5,000. The demand for land revenue in 1903-4 was Rs. 3,64,000, and for cesses Rs. 61,000. The density of population, 561 persons per square mile, is considerably below the District average. This talisit was the only one which decreased in population between 1891 and 1901. It is a level plain, intersected by numerous small rivers which have nearly all been dammed to supply an extensive system of canals. It is damp and malarious, especially towards the north, and population is liable to fluctuate considerably with the variations in minfall. This is the chief rice tract in the District, and sugarcane is less grown than in the areas farther south. The latter crop is also inferior, and its place is taken by maize in the higher lands. In 1903-4 the area under cultivation was 258 square miles, of which 44 were irrigated, almost entirely from canals.

Nawābganj Tahsīl.—East central tahsil of Bareilly District, United Provinces, conterminous with the pargana of the same name, lying between 28° 21' and 28° 39' N. and 79° 28' and 79° 47' E., with an area of 221 square miles. Population

increased from 124,349 in 1891 to 127,160 in 1901. There are 308 villages and three towns, none of which has a population of 5,000. The demand for land revenue in 1903-4 was Rs. 2,51,000, and for cesses Rs. 42,000. The density of population, 575 persons per square mile, is below the District average. The tahsil is a gently sloping plain, intersected by several small rivers from which canals are drawn. It is not so damp as the Baherī tahsil to the north, but the increase in population between 1891 and 1901 was less than in the south of the District. Rice and sugar-cane are largely grown. In 1903-4, 178 square miles were cultivated, of which 55 were irrigated. Canals supply half the irrigated area, and wells most of the remainder.

Aonla Town (Anwla).—Head-quarters of the talistic of the same name in Bareilly District, United Provinces, situated in 28° 17' N. and 79° 10' E., on a branch of the Oudh and Rohilkhand Railway from Aligarh to Bareilly city, and connected by a metalled road with Budaun. Population (1901), 14,383. The name is probably derived from that of the anvela tree (Phyllanthus Emblica). In the fourteenth and fifteenth centuries the neighbourhood was a thick forest, the lurkingplace of the Katehriyas. In the Ain-i-Akbari Aonla is shown as the head-quarters of a mahal or pargana. About 1730 Ali Muhammad, the rising leader of the Rohillas, procured the assassination of Dūja Singh, the Katehriyā chief, and shortly afterwards made Aonla his own residence. The town thus became the capital of Rohilkhand; but after Alī Muhammad's death, about 1749, separate residences were allotted to his sons, and Bareilly and Pilibhit became more important, as Hāfiz Rahmat Khān, who wielded most of the power, preferred these places. The town thus decayed and sank into insignificance, It is now divided into four separate quarters, which are in fact distinct villages, the intervals between them being filled with shaded graveyards or decaying mosques. A small castle still stands in which the first great Rohilla chief held his court, and his tomb lies in an extensive high-walled enclosure. The chief public buildings are the tahsili and dispensary, and the American Methodist Mission has a branch here. Aonla is administered under Act XX of 1856, with an income of about Rs. 3,000. There is a considerable local traffic, especially in grain; but it is possible that when Budaun is opened to railway communication trade will decrease. The tahsili school has about 150 pupils.

Bareilly City (Bareli).—Administrative head-quarters of

the Bareilly Division and District, United Provinces, with a cantonment, situated in 28° 22' N. and 79° 24' E., 812 miles by rail from Calcutta and 1.031 from Bombay. It lies at the junction of a branch of the Oudh and Rohilkhand Railway from Aligarh with the main line; and these are met by the narrow-gauge railways from Lucknow through Sitāpur, from Kāthgodām at the foot of the hills, and from Soron through Budaum. Population has increased steadily. The numbers at the four enumerations were as follows: (1872) 102,982, (1881) 173,417, (1891) 121,039, and (1901) 131,208. These figures include the population of cantonments, which numbered 13,828 in 1901. There are 67,000 Hindus, 59,000 Musalmāns, and 3,000 Christians.

Tradition relates that the old city was founded in 1537, and derived its name of Bans Bareli from Bas, a Barhela by caste, or from Bas and Barel, Katehriya Rajputs. The prefix is now usually interpreted as being the word bans or 'bamboo,' and is still used by the inhabitants. About 1573 a subordinate post was established here, to check the turbulent Katchriyas of Rohilkhand, and a small town gradually grew up round the fort. By the close of Akbar's reign, in 1596, Bareilly had become the head-quarters of a mahal or pargana. In 1657 it was made the capital of Katchr (see Romlkhand), and a new city was founded by Makrand Rai, who was appointed governor. As the Mughal empire decayed in the eighteenth century, the Robilla power was consolidated by Alī Muhammad, who established his capital at Aonla, and Bareilly was for a time of small importance. Hāfiz Rahmat Khān, who virtually succeeded Ali Muhammad, though nominally guardian to his sons, lived alternately at Pilibhit and at Bareilly, which again rose into prominence. The town fell, with the surrounding country, into the possession of the Nawab of Oudh after the defeat of the Rohillas by the combined British and Qudh, forces in 1774, and passed to the British by cession in 1801, when it became the head-quarters of a District and of a provincial court. In 1816 an insurrection took place in consequence of the imposition of a house tax, and in 1837 and 1842 serious religious disturbances occurred between Hindus and Musalmans.

During the Mutiny of 1857 Bareilly was an important centre of disaffection. The sepoys rose on May 31, and Khān Bahādur Khān, grandson of Hāfiz Rahmat Khān, was proclaimed governor. Most of the Europeans escaped to Naihī Tāl. The rebel ruler found government no easy task, and the

1

annals of his brief term relate many dissensions and difficulties. As British troops recovered ground to the south and west, the Nawāb of Farrukhābād, the Nāna Sāhib from Cawnpore, Fīroz Shāh from Lucknow, and other leading rebels took refuge in Bareilly. On May 5, 1858, a British army arrived before the city, and two days later the rebels fled into Oudh, and the British occupied Bareilly. In 1871, the peace of the city was again disturbed by serious religious riots, and since then religious differences have occasionally threatened to develop into actual fighting.

Bareilly stands on a plateau slightly elevated above the basin of the Ramganga, a branch of which now runs under the city. The native quarter is traversed by a long, well-kept street, widening at intervals into markets. The houses are usually of brick coated with white plaster, which is sometimes adorned with tracery, but few have any pretensions to architectural merit. The oldest building of any importance is the tomb of Hāfiz Rahmat Khān, close to the city on the Aonla road, which is an elegant building of plastered brick with gilded finials. It was built by his son in 1775 and repaired by his daughter in 1839, and was again repaired in 1891-2 at the cost of Government. The finest public buildings are the dispensary and Dufferin Hospitals, the talistic and chief police station, and a triangular building containing the municipal hall, a literary institute, and the Honorary Magistrates' courthouse. The Central jail is situated north of the city on the Naini Tal road. South of the city lies the civil station, which contains the high school, the American Methodist Orphanage and Theological Seminary, the District offices and District jail, and several churches. The cantonments lie south of the civil station, and contain a small fort built after the disturbance of 1816. The usual garrison consists of British and native infantry, native cavalry, and British artillery. Bareilly is the head-quarters of the Commissioner of the Division, and of the Executive Engineers of the Rohilkhand Canals and Rohilkhand division (Roads and Buildings).

A municipality was constituted in 1858, which in 1901 had a population of 117,380. During the ten years ending 1901 the income and expenditure averaged 1.2 lakhs. In 1903-4 the income was 2.1 lakhs, chiefly from octroi (1.5 lakhs). The expenditure of 2.2 lakhs included public works (Rs. 42,000), conservancy (Rs. 33,000), public safety (Rs. 31,000), and administration and collection (Rs. 19,000). An excellent water-supply is drawn from wells. In the same year the

income of the cantonment fund was Rs. 48,000, and the expenditure Rs. 49,000.

The chief industry of the city is sugar-refining, and about 20,000 tons of raw sugar are imported annually, while 10,000 tons of sugar are exported by rail alone. Bareilly is also noted for its furniture, made both of bamboo and of the ordinary timbers in use for this purpose. Cloth is woven and brass! vessels are made; but these industries are not very important. The Robilkhand and Kumaun Railway workshops employabout eighty hands, and there is a dairy farm in connexion with the lunatic asylum. The principal educational institution is the college, which contains ros students. A new building for this institution will be erected shortly on a site in the civil station presented by the Nawab of Rampur. The District school has about 450 pupils and the taksili school 370. The municipality maintains at schools and aids a others, with a total attendance in 1904 of 2,321. There are also three orphanages maintained by the Arya Samāj, the American Methodist Mission, and a Muhammadan Association.

Faridour Town.—Head-quarters of the tahsil of the same name in Bareilly District, United Provinces, situated in 28° 13' N. and 79° 33' E., on the main line of the Oudh and Rohilkhand Railway, and on the road from Lucknow to Delhi. Population (1901), 6,635. The place was formerly called Pura, and was founded by insurgent Katehriyā Rājpatts ejected from Bareilly between 1657 and 1679. It derives its present name from one Shaikh Farid, a mendicant or, according to others, a governor, who built a fort here during Rohilla rule (17,18-74). The town contains a tahsīlī, a dispensary, and a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income of about Rs. 1,000. The tahsīlī school has 125 pupils, and a girls' school about 20.

Rāmnagar.—Village in the Aonla tahsil of Bareilly District. United Provinces, situated in 28° 22′ N. and 79° 8′ E., 8 miles north of Aonla. The place is celebrated for the ruins in its neighbourhood. A vast mound rises on the north of the village, with a circumference of about 3½ miles, which still bears the name of Ahichhattra and is identified with the capital of the ancient kingdom of Panchāla and the place visited by Hiuen Tsiang in the seventh century. In one portion of the mound a conical heap of brick towers 68 feet above the plain, crowned by the ruins of a Hindu temple. Large quantities of stone carvings, Buddhist railings, and

ornamental bricks have been found in various parts of these mounds, and a series of coins bearing inscriptions which may be dated approximately in the first or second century B.C. The kings who struck them have been conjecturally identified with the Sunga dynasty mentioned in the Puranas.

[Cunningham, Archaeological Survey Reports, vol. i, p. 255; Coins of Ancient India, p. 79; V. A. Smith, Journal, Asiatic Society of Bengal, 1897, p. 303; Progress Report, Epigraphical Branch, North-Western Provinces and Oudh, 1891-2.]

Bijnor District (Bijnaur).—Northernmost District in the Boun-Bareilly Division, United Provinces, lying between 29° 1' and daries, configuration, 29° 58' N. and 78° o' and 78° 57' E., with an area of 1,791 and hill square miles. On the north-east the road which passes along and over the foot of the Himpleyer divides Piles foot of the Himpleyer divides the foot of the Himālayas divides Bijnor from Garhwāl District; south-east and south lie Naini Tal and Moradabad; while the Ganges flows along the western border between Bijnor and the Districts of Dehra Dün, Sahäranpur, Muzaffarnagar, and Meerut. The District of Bijnor, an irregular triangle of which the apex points directly northwards, forms the uppermost portion of the Rohilkhand plain, stretching like a wedge between the valley of the Ganges and the hills of Garhwal. In the north is a system of small elevations, known as the Chandi hills. which resemble in geological formation the Siwālik range in Dehra Dun on the western bank of the Ganges. These hills are little more than rugged and barren rocks, except in the valleys and on the lower slopes. They cover an area of about 25 square miles. South of the hills and along the north-east border lies a broad level belt of forest varying from z to 10 miles in width, across which flow numerous streams from the hills in the neighbouring District of Garhwal. Large clearances have been made in places, and cultivation sometimes extends as far as the submontane road. This tract resembles the Bhabar in the adjacent District of Naini Tal, but the marshy tarai belt found in Naini Tal does not occur here. The rest of the District is an open upland plain crossed by river valleys. The largest river is the Ganges, which debouches on the plain near the north of the District, and is there a rapid stream flowing over boulders. Lower down its course is less rapid, its bed widens, and the river becomes navigable from Nagal. The first considerable affluent of the Ganges is the Mālin, which rises in the Garhwal hills and flows across the north-west portion of the District. This river is celebrated in Sanskrit literature, and the scene of Kālidāsa's play of Sakuntalā is laid near its banks. It has also been identified with the

Erineses mentioned by Megasthenes. The Khoh rises in the Garhwāl hills, east of the Mālin, and flows almost due south, joining the Rāmcangā near the border of the District. The latter river crosses the Garhwāl border near the eastern corner, and meanders across the eastern portion of the Nagina taksīl. Both the Khoh and Rāmgangā are liable to sudden floods, which subside as quickly as they rise. Many smaller streams from the lower hills join these large rivers after a short course.

Geology.

Nearly the whole of the District is situated on the Gangetic alluvium, with a bhābar zone of coarse gravels along the north-east borders. The Chāndī hills are composed of Upper Tertiary rocks, all in a rapid statu of decay by weathering. These rocks comprise, towards the plains, a gentle normal anticlinal arch in middle Siwālik soft sand rock, which is very micaceous. North-east lies the southern limit of a synclinal trough in upper Siwālik conglomerates.

Botany.

The forests of Bijnor will be described later. The rest of the District presents no peculiarities in its flora. Fine groves of mango trees are found in every part. The river valleys as well as the forest glades produce grasses which are used for thatching, for basket-work, for matting, and for making rope and twine. The wild hemp (Cannabis sativa) grows abundantly; the leaves are collected and, when dry, are known as bhang, which is used for preparing a refreshing drink.

Fauna.

Tigers and leopards were formerly common in the forests, together with chital (Cerous axis) and sāmbar (Cerous unicolor). The deer have, however, been almost exterminated, and the carnivora have consequently retired farther into the hills. A tiger occasionally strays down, and leopards are still met with in ravine tracts. Antelope are common, and a few hog deer and wild hog survive along the Rāmgangā and Ganges. Four-horned deer and barking-deer are occasionally met with in the forests. There are some hyenas, and the lynx is not unknown. Wild elephants come down from the hills during the rains. The chief game-birds are duck, snipe, peafowl, black partridge, jungle-fowl, quail, and sand-grouse.

Climate and minfall. Its proximity to the Himālayas renders the climate of Bijnor cool and pleasant, while the abundance of drainage channels prevents the District from being as unhealthy as

R. D. Oldham, 'Geology of Part of the Gangasulan Pargana,' Records, Geological Survey of India, vol. xvii, pt. iv; and C. S. Middlemiss, 'Physical Geology of the Sab-Himalaya of Garhwal and Kumaun,' Memoirs, Geological Survey of India, vol. xxiv, pt. ii.

other tracts near the foot of the mountains. The annual rainfall averages 44 inches, varying from 38 near the Ganges to 47 in the north of the District. Between 1864 and 1898 the variations from the average did not exceed 25 per cent. in twenty-seven years, while in four years the fall was in excess, and there were four years of considerable deficit.

Legend ascribes the foundation of Bijnor town to the History. mythical king Ben or Vena, who is familiar in tradition from the Punjab to Bihar. In the seventh century Hiuen Tsiang visited a kingdom the capital of which has been identified with Mandawar. The early history of Muhammadan rule is obscure, but raids by the Mongols are referred to. In 1399 Timur visited the District, and committed his usual atrocities, massacring a large number of the inhabitants. and fighting several pitched battles. Thence he marched to Hardwar, returning to the Doab. No more is heard of Bijnor till the time of Akbar, when it formed part of the sarkar of Sambhal in the Sūbah of Delhi. During the most prosperous age of the Delhi empire, the District shared in the general freedom from historical incidents, though in 1566 and again in 1587 peace was disturbed by ambitious jägirdärs or by rebels fleeing from other parts of India. As the power of the Mughals relaxed, the Rohilla Pathans began to assert independence, under Alī Muhammad. Although this chieftain had managed to annex the rest of ROHILKHAND by 1740, his first acquisitions in Bijnor seem to have been made in 1748. after his return from exile, while his friend, Dunde Khan, occupied another tract about the same time. The remainder of the District was rapidly acquired, and before his death in 1749 Alī Muhammad made a grant of the northern portion to Najib Khān, who was to become a great leader. In the forests on the border of the District lies a strong fort, called Lal Dhang, which often proved a safe refuge in the struggles between the Rohillas and the Nawabs of Oudh. 1752, after a trying siege, the Rohillas gave a bond to the Marathas, as the price of release, which was afterwards made the excuse for further invasions. Najib Khan married Dunde Khān's daughter, and gradually extending his influence west of the Ganges, and at Delhi, obtained the title of Najib-uddaula and in 1757 became paymaster of the imperial army. His success laid him open to the attacks of jealous rivals; and the infamous Wazīr Ghāzī-ud-dīn called in the Marāthās. who besieged Naiib-ud-daula in the fort of Shukartar on the west bank of the Ganges, but retreated on the approach of

the Rohillas. After the battle of Pānīpat, where Najīb-ud-daula distinguished himself, he became Wazīr, and filled the highest post in the kingdom, with credit to himself and benefit to the state. After his death in 1770 his son, Zābita Khān, was defeated by the Marāthās, who now ravaged Rohilkhand; and a few years later, in 1774, the Rohilla power east of the Ganges was crushed, and the final treaty by which the territory was incorporated in Oudh was concluded at Lāl Dhāng. The District was ceded to the British by the Nawāb of Oudh in 1801; and four years later Amīr Khān, the Pindāri, rode through it like a whirlwind, recalling the raid of Tīmūt 400 years before. The District then remained quiet until the Mutiny of 1857.

News of the Meerut outbreak reached Bijnor on May 13. The Roorkee sappers mutinied and arrived at Bijnor on the 19th, but they passed on without creating any disturbance, and the District remained quiet till June 1. On that date the Nawāb of Najībābād, a grandson of Zābita Khān, appeared at Bijnor with 200 armed Pathans. On the 8th, after the outbreak at Bareilly and Moradabad, the European officers quitted Bijnor, and reached Roorkee on the 11th. The Nawab at once proclaimed himself as ruler, and remained in power till August 6, when the Hindus of the District rose against the Musalman authority and descated him for the time. On the 24th the Muhammadans returned in force and drove out the Hindus. The latter attacked their conquerors again on September 18, but without success, and the Nawab ruled unopposed until April 17, 1858. Our troops then crossed the Ganges, and utterly defeated the rebels at Nagina on the zist. British authority was immediately re-established, and has not since been disturbed.

Archaeology. The forests in the north of the District contain many ancient ruins and mounds which have not been fully explored; but Buddhist remains have been unearthed in places. At NajīrākāD, the tomb of Najīb Khān, the founder of the town, and a few remains of other buildings are the chief memorials of Muhammadan rule.

The people.

The District contains 16 towns and 2,132 villages. The village sites still preserve the old compact appearance, which was the result of the unsettled times when men built their houses close together for protection, and there are few outlying hamlets. Population fluctuates considerably. The numbers at the four enumerations were as follows: (1872) 737,153, (1881) 721,450, (1891) 794,070, and (1901) 779,951. The variations largely

depend on the rainfall, excessive rain causing land to fall out of cultivation. There are four talsils—BIJNOR, NAJIBABAD, NAGINA, and DHAMPUR-the head-quarters of each being at a place of the same name. The chief towns are the municipalities of Nagina, Najibarad, Bijnor (the District head-quarters), CHANDPUR, and DHAMPUR. The following table gives the chief statistics of population in 1901:-

'	a E	Nur	nber of	Ė	<u> </u>	in of	abje and
Tahsil.	Area in square miles.	Towns,	Villages.	Population.	Population per square mile.	Percentage variation i population tween 189 and 1901.	Namber of persons al
Bijnor	483	6	572	203,972	422	+ 2.0	5,248
Najībābād .	396	2	422	153,896	389	- I·0	3,558
Nagina	453	2	464	156,898	346	-143	2,816
Dhāmpur	459	6	674	265,185	578	+ 4.4	4,837
District total	1,791	16	2,132	779,951	435	- 1.S	16,459

Hindus form 64 per cent. of the total, Musalmans 35 per cent,, and there are 5,730 Aryas, a larger number than in any District in the Provinces except Bulandshahr. The density of population is almost the same as the Provincial average. Between 1891 and 1901 the District suffered both from excessive rain and from drought. Almost the whole population speak Western Hindi, the prevailing dialect being Hindustāni.

Chamārs (leather-dressers and cultivators), 118,000, are the Castes and most numerous of the Hindu castes, forming nearly 25 per cent. occupations. of the total Hindu population. Raiputs number 72,000, but 61,000 of these are so-called Chauhāns, who intermarry among themselves and therefore are not true Rajputs. Jats (agriculturists), 55,000; Tagās (agriculturists), 8,000; and Sainīs (cultivators), 20,000, are chiefly found in the west of the United Brāhmans number only 26,000. A caste peculiar Provinces. to the District is that of the Ramaiyas or pedlars (2,200). Among Muhammadans are Shaikhs, 50,000; Julāhās (weavers) 57,000; and Telis (oil-pressers), 15,000. The Thojhas (6,000) are not found east of Bijnor. Agriculture supports only 47 per cent. of the population, while personal services support 8 per cent., general labour 8 per cent., and cotton-weaving 6 per cent. Chauhāns, Baniās, Jāts, Tagās, and Shaikhs are the largest holders of land; and Jats, Chauhans, Shaikhs, Rawas, and Sain's are the chief cultivators.

Christian missions. Out of 1,853 native Christians in 1901, 1,824 were Methodists. The American Methodist Mission has laboured here since 1859, and has several branches in the District.

General agriculturnl conditions. Most of Bijnor is included in the uplands, which are divided into three portions. The western tract, near the Ganges, consists of low sandy ridges, the space between which is occupied by a fair loam; but facilities for irrigation are not good. East of this tract the central portion of the District forms the low-lying valley of the Rān, Gāngan, and Karula rivers. This is decidedly more fertile, and opportunities for irrigation are better than in the western tract. Another elevated watershed farther east, which divides the central portion from the Khoh and Rāmgangā rivers, is sandy but more fertile than the western tract. East of the Rāmgangā lies an area the soil of which is most and fertile, but the deadly climate makes cultivation fluctuate. As in most Districts where Jāts are found, equal care is devoted to all good land, instead of the lands near village sites receiving most of the manure available.

Chief
agricultural statistics and
principal
crops.

The tenures are those usually found in the United Provinces. There are 4,348 zamīndāri mahāls, thirty-five patūdāri, and 369 bhaiyāchārā, the local term for the last being lānādāri. The main agricultural statistics for 1903-4 are shown below, in square miles:—

Tahsii		Total.	Cultivates.	Irrigated,	Cultivable waste.
Bijnor . Najībābād . Nagīna . Dbāmpur		4 <sup>N</sup> 3 396 453 459	328 188 197 320	3 7 14 39	53 66 148 51
-	Total	1,791	1,033	68	318

The chief food-crops, with their areas in square miles in 1903-4, are: rice (221), wheat (276), barley (115). bājra (120), and gram (98). Sugar-cane is the most important of the other crops, covering 105 square miles. Cotton and oilseeds are also largely grown.

Improvements in agricultural practice. Cultivation has not extended within the last forty years; but the area sown with the more valuable crops—such as rice, sugar-cane, and wheat—has increased, the area double cropped is rising, and a better variety of wheat has been introduced. Loans under the Land Improvement and Agriculturists' Loans Acts are not taken to any large extent, amounting to only Rs. 77,000 between 1890 and 1903, of which Rs. 40,000 was advanced in the famine year 1896—7.

The ordinary breed of cattle is inferior; but the forests pro- Cattle, vide ample grazing for cattle from other Districts. An attempt horses, and has been made to improve the based of the same and to improve the based of the same and to improve the based of the same and to improve the based of the same and to improve the based of the same and to improve the based of the same and to improve the based of the same and the same and to improve the based of the same and the same a has been made to improve the breed of horses, and two Government stallions are kept. Mule-breeding has become popular, and several donkey stallions are maintained. The sheep are of the ordinary inferior type.

Bijnor is remarkable for the small extent of its irrigation by Irrigation. artificial means. In 1903-4 canals supplied 26 square miles, wells 33, and other sources o. The canals are small works, those drawn from the Khoh and Gangan rivers being maintained by Government; while a third canal, drawn from the Mālin, is a private enterprise. Some of the rivers are used directly for irrigation, especially in years of drought. Masonry wells are practically never used for irrigation; and water is generally obtained, where required, from shallow temporary wells, from which it is raised in a pot by a lever.

Three portions of the forest land in the District are 'reserved' Forests. under the Forest Act. The Chandi forest of 60 square miles. which includes the hills in the north of the District, some islands in the Ganges, and part of the plains, is part of the Ganges division of the Western Circle. In the northern half sal (Shorea robusta) is well established; but the southern portions are more open. The forest supplies bamboos and other minor products to Hardwar, and the revenue varies from Rs. 10,000 to Rs. 20,000. The Rehar forest is situated in the south-east of the District and belongs to the Garhwal Forest Its area is 26 square miles; and sal and other timber, fuel, and grass are supplied to inhabitants of the neighbourhood, the revenue varying from Rs. 2,000 to Rs. 7,000. The Amsot and Mohanwali Reserves, managed by the Collector. include an area of 8 square miles.

Kankar or nodular limestone is extremely rare, and is Minerals. generally imported from Moradabad. Lime is made from the limestone found in the Chandi hills.

The chief industry of the District is the manufacture of raw Arts and and refined sugar, which are largely exported. Coarse cotton manufaccloth is woven in many parts, and in a few towns a finer material is produced. There are small local industries at several places, such as the manufacture of Brāhmanical threads (janeo) at Bijnor, papier mâché at Mandāwar, carved ebony, glassware. and ropes at Nagîna, and ironwork at Dhamour.

Sugar and forest produce are the chief exports, while gram Commerce. and other grain, salt, piece-goods, and metals are imported. The grain and salt come chiefly from the Punjab. The trade

of Western Kumaun largely passes through the District from Kotdwara at the foot of the hills. The chief commercial centres are the towns of Seohara, Dhampur, Nagina, and Najibabad on the railway. Before the railway was opened, sugar was exported by road to Meerut or Muzaffarnagar; but the railway now takes about four-fifths of the total exports.

Railways

The main line of the Oudh and Rohilkhand Railway passes through the centre of the District, with a branch from Najībābād to Kotdwāra at the foot of the Himālayas in Garhwāl District. A line from Gajraula on the Morādābād-Ghāziābūd Railway to Chāndpur in the south of the District has been surveyed. Communications are very defective. Only 39 miles of road are metalled, while 553 miles are unmetalled. The whole of the former and 17 miles of the latter are maintained by the Public Works department; but the cost of repairs is met almost entirely from Local funds. The metalled roads radiate from Bijnor town to the railway at Nagīna, and to the Ganges on the Meerut and Muzaffarnagar roads. The tracts most in need of improved roads are the northern Ganges khūdar and the area north-east of the railway. Avenues of trees are maintained on 95 miles.

Famine.

Bijnor has suffered comparatively little from drought. The natural moistness of the soil and the rarity of a complete failure of the rains, due to the proximity of the hills, combine to save a crop in most years, while the profits from sugar-cane have been fairly constant. The dependence for food-grains on other tracts is the most serious factor in prolonged drought. In 1803-4 famine was severely felt; but Bijnor escaped distress in later years till 1837-8, when Rs. 91,000 of the revenue demand was remitted. Famine attacked the District in 1860-1, when Rs. 32,000 was spent on relief, and in 1868-9 the expenditure was 1.8 laklis. In 1878 the number on relief works rose to over 22,000. Bijnor again escaped lightly in 1896-7, when relief works were opened but did not attract considerable numbers.

Instrict

The Collector is assisted by a member of the Indian Civil Service (when available), and by two Deputy-Collectors recruited in India. A tahsildar is stationed at the head-quarters of each of the four tahsils.

Civil justice and crime. There are two regular District Munsifs, and village Munsifs have recently been appointed. The District is included in the Civil and Sessions Judgeship of Morādābād, criminal work being usually disposed of by the Additional Judge. Crime is not heavy, and Bijnor is not remarkable for any special offences. Female infanticide was formerly suspected in the case of the Jāts,

and in 1904 as many as 1,884 persons were still registered and under surveillance.

Bijnor, when acquired by cession in 1801, formed the Land northern subdivision of the new District of Moradabad. In revenue 1817 it was constituted a separate charge with head-quarters tration. at Nagina, and in 1824 Bijnor became the capital. The early settlements were for short periods, and were based on rough statements of area and probable out-turn and on a consideration of previous collections. Up to 1822 the system of administration was one of farming; but in that year proprietary rights were first recognized. A rough survey was commenced about 1827, and the first regular settlement on modern principles was made under Regulation IX of 1833 between 1834 and 1839. It was preceded by a regular survey and was carried out in the usual method, by ascertaining standard rent and revenue rates. The revenue fixed was 11.2 lakhs, which, though very uneven, was much more moderate than earlier settlements. Another revision took place between 1863 and 1874, when a revenue of 11.8 lakhs was assessed. The last resettlement of the District was made between 1893 and 1898, but four parganas were settled in 1901-2. The revenue then fixed amounted to 14.5 lakhs, or about 46 per cent. of the net 'assets.' The incidence is a little more than R. 1 an acre, varying from about 5 annas to slightly more than Rs. 2. Assessments of revenue in Bijnor have always been difficult, owing to the prevalence of grain rents. Cash rents are always taken on account of sugar-cane and cotton, but the produce of other crops is divided equally between the landlord and the tenant. Another custom exists by which for a short period, usually three to five years, the owner of a village agrees with the whole cultivating community to receive from them a lump sum in place of the cash rents and a share of produce. The latest revision of settlement was largely based on rent rates derived from these leases. The soil was classified, and rates paid for different classes were ascertained.

Collections on account of land revenue and total revenue have been, in thousands of rupees:—

	1860-1.	1890-1.	1900-1.	1903-4.
Land revenue Total revenue	12,29 13,87	11,93 16,57	16,07 21,59	14,21

There are five municipalities—Nagīna, Najībābād, Bijnor, Local self-Chāndpur, and Dhāmpur—and eight towns are administered government. WX of 1856. Beyond the limits of these, local

affairs are managed by the District board, which has an income and expenditure of about a lakh. In 1903-4 roads and buildings cost Rs. 69,000.

l'olice and pails. The District contains 20 police stations; and the Superintendent of police commands a force of 4 inspectors, 75 subordinate officers, and 308 constables, besides 210 municipal and town police, and 1,827 rural and road police. The District jail contained a daily average of 256 prisoners in 1903.

Education.

Few Districts in the United Provinces are so backward in regard to literacy as Bijnor. In 1901 only 2 per cent, (3.9 males and 0.2 females) could read and write. The number of public schools increased from 128 with 3,991 pupils in 1880-1 to 204 with 8,588 pupils in 1900-1. In 1903-4 there were 209 with 9,307 pupils, including 537 girls, besides 250 private schools with 3,768 pupils. Three of the schools are managed by Government and 107 by the District and municipal boards. Out of a total expenditure on education of Rs. 46,000, Local funds contributed Rs. 35,000 and fees Rs. 9,000. An attempt has been made by the Arya Samāj to revive the dld Hindu system of education, and a gurākul has been founded at Kāngrī in the north of the District.

Hospitals and dispensaries. There are 10 hospitals and dispensaries, with accommodation for 88 in-patients. The number of cases treated in 1903 was 89,000, of whom 1,500 were in-patients, and 400 operations were performed. The total expenditure was Rs. 15,000, most of which was met from Local funds.

Vaccina-

About 26,800 persons were successfully vaccinated in 1903-4, representing a proportion of 34 per 1,000 of population. Vaccination is compulsory only in the municipalities.

[District Gazetteer (1879, under revision); F. J. Pert, Settlement Report (1899).]

Bijnor Tahsīl.—Western tahsīl of Bijnor District. United Provinces, comprising the parganas of Bijnor, Dārānagar, Mandāwar, Chāndpur, and Bāshta, and lying between 29° 1' and 29° 38' N. and 78° 0' and 78° 25' E., with an area of 483 square miles. Population increased from 200,039 in 1891 to 203,972 in 1901. There are 572 villages and six towns, the largest of which are Bijnor (population, 17,583), the District and tahsīl head-quarters, Chāndpur (12,586), Mandāwar (7,210), Jhālū (6,444), and Haldaur (5,628). The demand for land revenue in 1903-4 was Rs. 3,96,000, and for cesses Rs. 64,000. The density of population, 422 persons

per square mile, is slightly below the District average. The talisil is bounded on the west by the Ganges, and the Malin crosses its northern portion. Near the Ganges is a rich alluvial tract, from which a gentle ascent leads to the sandy uplands. In 1903-4 the area under cultivation was 328 square miles, of which only 8 were irrigated.

Najībābād Tahsīl.—Northern lahsīl of Bijnor District, United Provinces, comprising the parganas of Najībābād, Kiratpur, and Akbarābād, and lying between 29° 25' and 29° 58' N. and 78° 7' and 78° 31' E., with an area of 396 square miles. Population fell from 156,873 in 1891 to 153,896 in 1901. There are 422 villages and two towns: NAJIBABAD (population, 19,568), the taked head-quarters, and Keratpur (15,051). The demand for land revenue in 1903-4 was Rs. 2,75,000, and for cesses 45,000. The density of population, 380 persons per square mile, is much below the District average. The tahsil contains a considerable area of forest. besides a hilly tract which is uninhabited. The northern portion is secred with torrents, which are dry for eight months in the year but scour deep ravines during the rains. Numerous other streams cross the rich alluvial plain which constitutes the rest of the tahsil, the chief being the Malin. The Ganges forms the western boundary. In 1903-4 the area under cultivation was 188 square miles, of which only 7 were irrigated. A small private canal from the Mālin serves about one square mile, but rivers are the chief source of supply.

Nagina Tahsil.—North-eastern tahsil of Bijnor District. United Provinces, comprising the parganas of Nagīna, Barhāpura, and Afzalgarh, and lying between 29° 13' and 29° 43' N. and 78° 17' and 78° 57' E., with an area of 453 square miles. Population fell from 183,147 in 1891 to 156,898 in 1901. There are 464 villages and two towns: NAGINA (population, 21,412), the tahsil head-quarters, and AFZALDARH (6,474). The demand for land revenue in 1903-4 was Rs. 2,75,000, and for cesses Rs. 49,000. The density of population, 346 persons per square mile, is the lowest in the District. The tahsil contains a considerable area of forest. It is crossed by several small streams, and also by the Ramganga and its tributary the Khoh. The soil is rich, and irrigation is provided in the Nagina pargana by small canals from the Khoh and Gangan; but the climate is not healthy, and the considerable decrease of population between 1891 and 1901 is chiefly due to the unfavourable seasons ending with the excessive rain of 1894. Cultivation also suffers from the depredations of wild animals.

In 1903-4 the area under cultivation was 197 square miles, of which 14 were irrigated. Canals supply the greater part of the irrigated area.

Dhampur Tahsil.—South-eastern tahsil of Bijnor District, United Provinces, comprising the parganas of Dhampur, Seohārā, Nihtaur, and Būrhpur, and lying between 29° 2' and 29° 25' N. and 78° 19' and 78° 41' E., with an area of 459 square miles. Population increased from 254,011 in 1801 to 265.185 in 1901. There are 674 villages and 6 towns: SHERKOT (population, 14,999), NIHTAUR (11,740), SEOHĀRĀ (10,062), DHAMPUR (7,027), SAHASPUR (5,851), and TAIRUR (5.015). The demand for land revenue in 1903-4 was Rs. 1,74,000, and for cesses Rs. 82,000. The density of population, 578 persons per square mile, is the highest in the District. Several rivers cross the tahsil from north to south, the chief being the Gangan, the Khoh, and the Ramganga. Dhampur lies in the central depression of the District and is fertile; but parts of it are liable to flooding, and sandy tracts are found in the east. In 1903-1 the area under cultivation was 320 square miles, of which 30 were irrigated. Wells supply about half the irrigated area, and small canals from the Gangan and Khoh about a third.

Afzalgarh.—Town in the Nagina tahsil of Bijnor District, United Provinces, situated in 29° 24' N. and 78° 41' E., 34 miles east of Bijnor town. Population (1901), 6,474. The place was founded by one Afzal Khān about the middle of the eighteenth century. It lies low, and is very unhealthy owing to the dampness of the neighbourhood. The fort built by Afzal Khān was dismantled after the rebellion of 1857. The town is administered under Act XX of 1856, with an income of about Rs. 1,100. Excellent cotton cloth is made here by Julāhās (Muhammadan weavers). There is a primary school with 100 pupils.

Bijnor Town (Bijnaur).—Head-quarters of the District and tahsil of the same name, United Provinces, situated in 29° 22' N. and 78° 8' E., on a metalled road 19 miles from Nagina station on the Oudh and Rohilkhand Railway. Population (1901), 17,583, of whom 9,129 were Musalmāns. According to tradition, the town was founded by the mythical Rājā Ben or Vena. Its early history is, however, a blank until the time of Akbar, when Bijnor gave its name to a mahāl or pargana. In the seventeenth century it was the head-quarters of the Jäts, who struggled long with the Musalmäns of the place. It became the head-quarters of the District

in 1824, and was occupied in the Mutiny by the rebel Nawāb of Najībābād. The town stands on undulating ground 3 miles east of the Ganges, and is well paved and drained. Besides the District offices it contains male and female dispensaries, the District jail, and the local head-quarters of the American Methodist Mission. Bijnor has been a municipality since 1866. During the ten years ending 1901 the income and expenditure averaged Rs. 11,000. In 1903-4 the income was Rs. 17,000, chiefly from octroi (Rs. 12,000); and the expenditure was Rs. 16,000. There is some trade in sugar, and the pocket-knives and Brāhmanical threads (janeo) made here enjoy more than a local reputation. The District school has 155 pupils, a middle school 282, a girls' school 48, and eight aided schools 300 boys and 30 girls.

Chandpur.—Town in the District and talisit of Bijnor, United Provinces, situated in 29° 8' N. and 78° 16' E., 21 miles south of Bijnor town. A line from Chandpur to Gajraula on the Moradabad-Ghaziabad branch of the Oudh and Rohilkhand Railway has been surveyed. Population (1901), 12,586. Chandpur was the chief town of a mahal or pargana under Akbar, but nothing more is known of its history. It was occupied by the Pindāris in 1805, and by Musalman rebels in 1857. Up to 1894 it was the head-quarters of a separate tahsil. The town is well paved and drained, and presents a thriving appearance. It contains a dispensary and police station, and has been a municipality since 1866. During the ten years ending 1901 the income and expenditure averaged Rs. 7,000. 1903-4 the income was Rs. 11,000, chiefly from octroi (Rs. 8,000); and the expenditure was Rs. 11,000. The principal manufactures are pipe-bowls and water-bottles of earthenware, and coarse cotton cloth. A middle school has 200 pupils and 12 smaller schools about 530.

Dhāmpur Town.—Head-quarters of the tahsīl of the same name in Bijnor District, United Provinces, situated in 29° 18' N. and 78° 31' E., on the main line of the Oudh and Rohil-khand Railway. Population (1901), 7,027. The first historical event connected with the town is the defeat of the imperial forces here by Dunde Khān, the Rohilla, about 1750. Dhāmpur was sacked by the Pindāris under Amīr Khān in 1805, and an attempt was made to plunder the treasury during the Mutiny in 1857. The town is well built and thriving, and contains the tahsīlī, a private dispensary, and a branch of the American Methodist Mission. Dhāmpur has been a municipality since 1866. During the ten years ending 1901 the

income and expenditure averaged Rs. 7,000. In 1903-4 the income was Rs. 10,000, chiefly from octroi (Rs. 6,000); and the expenditure was also Rs. 10,000. There is a considerable trade in iron and brassware; and locks, brass candlesticks, carriage ornaments, gongs, and badges are largely made. The taksili school has 160 pupils, and the municipality manages two schools and aids seven others with 574 pupils.

Haldaur.—Town in the District and tahsil of Bijnor, United Provinces, situated in 29° 17' N. and 78° 16' E., 12 miles south-east of Bijnor town. Population (1901), 5,628. The place is said to have been founded by one Halda Singh, the reputed ancestor of the Chauhāns, to whom it now belongs. The head of the family suffered for his loyalty in 1857, and was rewarded with the title of Rājā. Haldaur contains a post office and a handsome house, the residence of the Chauhān proprietor. A panchāyat of sugar-refiners is held annually, which settles the price to be paid to cultivators for raw sugar, and the rate so fixed is accepted as a standard over the whole District. The primary school has 40 pupils, and two aided schools have 94 pupils.

Jhālū.—Town in the District and talsīl of Bijnor, United Provinces, situated in 29° 20' N. and 78° 14' E., 6 miles southeast of Bijnor town. Population (1901), 6,444. Under Akbar it was the head-quarters of a mahāl or pargana. It is administered under Act XX of 1856, with an income of about Rs. 1,000. It contains a primary school with 113 pupils, and three aided schools with 62 boys and 35 girls.

Kiratpur.—Town in the Najībābād takšīl of Bijnor District, United Provinces, situated in 29° 30' N. and 78° 13' E., 10 miles north of Bijnor town. Population (1901), 15,051. There are two divisions of the town, Kīratpur Khās and Basī. The former was founded in the fifteenth century during the reign of Bablol Lodī, and the latter in the eighteenth century by Pathāns, who built a fort. The walls are still standing near the gateway, and within is a handsome mosque. Kīratpur is administered under Act XX of 1856, with an income of about Rs. 3,600. Trade is insignificant, but lacquered chairs and boxes are made. The District board school has 112, pupils, and six aided schools 216 pupils. The American Methodist Mission has a branch here.

Mandāwar.—Town in the District and talsīl of Bijnor, United Provinces, situated in 29° 29' N. and 78° 8' E., 8 miles north of Bijnor town. Population (1901), 7,210. It was identified by St. Martin and by General Cunningham with the Moti-

pura visited by Hiuen Tsiang in the seventh century; but this identification rests entirely on its distance from various places, and no excavations have been made 1. According to tradition, some Agarwal Banias settled here in the twelfth century, when they found the place deserted. The town was captured by Timur in 1399, and was the capital of a mahal or pargana under Akbar. In 1805 it was pillaged by Amīr Khān, the Pindari, and during the Mutiny it suffered at the hands of Tat marauders. A mound half a mile square rises some 10 feet above the rest of the town, containing large bricks. The Jama Masjid stands on this, constructed from the materials of a Hindu temple. North-east of the town is another large mound, and there are two tanks in the neighbourhood. dāwar is administered under Act XX of 1856, with an income of about Rs. 1,200. There is a small industry in papier maché; and boxes, pen-trays, paper-knives, &c., are made. A primary school has 126 pupils, and two aided schools have 85 pupils. The American Methodist Mission has a branch here.

Nagina Town.-Head-quarters of the tahsil of the same name in Bijnor District, United Provinces, situated in 29° 27' N. and 78° 26' E., on the Oudh and Rohilkhand Railway, and at the terminus of a metalled road from Bijnor. Population (1901), 21,412, of whom 14,887 were Musalmans. The early history of the town is unknown, but it is mentioned in the Ain-i-Akbarī as head-quarters of a mahāl or pargana. During the rise of the Rohilla power in the middle of the eighteenth century a fort was built here. In 1805 the place was sacked by the Pindaris under Amir Khan, and from 1817 to 1824 it was the head-quarters of the newly-formed District called Northern Morādābād. During the Mutiny the town was the scene of several conflicts between rival parties, as well as of the final defeat of the rebels on April 21, 1858, which crushed the revolt in Bijnor. Nagīna is a large and busy place, with good brick houses and paved streets, which drain into a tributary of the Khoh on the east and into the Karula on the west. It contains the old fort, now used as a talsīlī, a dispensary, a talsīlī school, and a branch of the American Methodist Mission. Nagīna has been a municipality since 1886. During the ten years ending 1901 the income and expenditure averaged Rs. 12,000. In 1903-4 the income was Rs. 18,000, chiefly from octroi (Rs. 15,000); and the expenditure was Rs. 18,000. A market is held twice a week, when there is a considerable trade in sugar, rice, and cotton. Nagīna is celebrated for the

Archaeological Survey Reports, vol. i, p. 248.

excellent workmanship of its carved abony wares, such as walking-sticks, trays, boxes, &c., which are frequently inlaid with ivory. Large quantities of small glass phials are blown here, and exported to Hardwar for the pilgrims who carry away. Ganges water in them. In former days matchlocks were largely made, and some ironwork is still produced. Hempen sacking and ropes and lacquered goods are also made. The tahsili school has 192 pupils, and the municipality aids 12 primary schools attended by 513 pupils.

Najibābād Town.—Head-quarters of the taisil of the same name in Bijnor District, United Provinces, situated in 20° 32' N, and 78° 21' E., at the junction of the main line of the Oudh and Rohilkhand Railway with the branch to Kotdwara in Garhwäl. Population (1901), 19,568. Najībābād was founded by Najib-ud-daula, paymaster and for a time Wazir of the Mughal empire, who built a fort at Patthargarh, a mile to the east, in 1755. In 1772 the town was sacked by the Marathas, and in 1774 it passed into the hands of the Nawab of Oudh. During the Mutiny Mahmud, great-grandson of Najib-ud-daula, revolted, and in 1858, when the place was recovered, the palace was destroyed. Najibābād is close to the forest and its climate is unhealthy, but the town is well drained into the Malin. The principal relic of Pathan rule is the tomb of Naiib-ud-daula; and a fine carved gateway still marks the site of the palace, now occupied by the talistis. A spacious building called the Mubarak Bunyad, which was built at the close of the eighteenth century, is used as a resthouse. The fortress of Patthargarh, also known as Najafgarh, is în ruins. stone used in its construction was taken from an ancient fort. called Mordhaj, some distance away. Najibābād contains a dispensary and police station, and a branch of the American Methodist Mission. It has been administered as a municipality since 1866. During the ten years ending 1901 the income and expenditure averaged Rs. 15,000. In 1903-4 the income was Rs. 25,000, chiefly from octroi (Rs. 20,000); and the expenditure was Rs. 28,000. Najībābād is of considerable importance as a dépôt for trade with the hills. Metal vessels, cloth, blankets, shoes, &c., are made here, and exported to ' Garhwal, while there is a through trade in salt, sugar, grain, and timber. The town is also celebrated for its production of sweetments and small baskets, and in former days its matchlocks were well-known. The tahsiti school has over 220 pupils and an English school about 100. A primary school and 11 aided schools have about 350 pupils.

Nihtaur.—Town in the Dhampur tahsil of Bijnor District, United Provinces, situated in 29° 20' N. and 78° 24' E., 16 miles east of Bijnor town. Population (1901), 11,740. The town has a mean appearance, most of the houses being built of mud, but there is a handsome old mosque, to which three modern domes have been added. A few years ago a seditious organization was discovered here. It was known as the Bāra Topī, or 'twelve hats,' and resembled the Sicilian secret societies. Nihtaur is administered under Act XX of 1856, with an income of about Rs. 3,300. There is a little trade in dyeing, but the chief industry is sugar-refining. A middle school has 160 pupils, and two aided schools are attended by 52 boys and 40 girls.

Sahaspur.—Town in the Dhāmpur tahsīl of Bijnor District, United Provinces, situated in 29° 7' N. and 78° 37' E., on the Oudh and Rohilkhand Railway. Population (1901), 5,851. It was the head-quarters of a mahāl or pargana in Akbar's time. The town is extremely dirty; and though most of its inhabitants are Musalmāns, it swarms with pigs. There is a fine sarai used by Hindu pilgrims on their way to Hardwār. The only industry is the weaving of cotton cloth of good quality. A primary school has 50 pupils.

Seohārā (Siuhārā).—Town in the Dhāmpur tahsīl of Bijnor District, United Provinces, situated in 29° 13' N. and 78° 35' E., on the main line of the Oudh and Rohilkhand Railway. Population (1901), 10,062. The town contains a police station and a handsome mosque, and also a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income of about Rs. 3,000. Its trade is of some importance. A primary school has 63 and five aided schools have 182 pupils.

Sherkot.—Town in the Dhāmpur tahsīl of Bijnor District, United Provinces, situated in 29° 20' N. and 78° 35' E., 28 miles east of Bijnor town. Population (1901), 14,999. Sherkot was founded during the reign of Sher Shāh, and under Akbar it was the chief town of a mahāl or pargana. In 1805 it was sacked by Amīr Khān, the Pindāri, and in the Mutiny of 1857 it became the scene of struggles between loyal Hindus and rebel Musalmāns. Up to 1844 it was the head-quarters of the tahsīl, and a dispensary is maintained here. Sherkot is administered under Act XX of 1856, with an income of about Rs. 4,000. There is a considerable trade in sugar, and embroidered rugs are made. A middle school has 135 pupils, and three aided schools are attended by 42 boys and 65 girls.

Tājpur,-Town in the Dhampur tahsil of Bijnor District, United Provinces, situated in 29° 10' N. and 78° 29' E., 27 miles south-east of Bijnor town. Population (1901), 5,015. town is chiefly noted as the residence of the leading Taga family in the District, some members of which have embraced Christianity. The Taipur estate was acquired in the eighteenth century, and further extended in the nineteenth for services rendered to the newly established British administration. 1857 the samindar or chaudhri of Thipur remained loyal, and was rewarded by the title of Raja and by remissions of revenue. The present Raja lives in a fine house built after the European fashion, and is a member of the Provincial Legislative Council. Taipur contains a dispensary maintained by the Raja, a primary school with 70 pupils, and an aided girls' school with 32 pupils.

Bonnfiguration, and river system.

Budaun District (Badāyūn).—South-western District of dartes, con- the Barcilly Division, United Provinces, lying between 27° 40' and 28° 29' N. and 78° 16' and 79° 31' E., with an area of 1,987 square miles. It is bounded on the north by Moradabad; on the north-east by the State of Rampur and Bareilly District; on the south-east by Shahjahanpur; and on the south-west by the Ganges, which divides it from the Districts of Bulandshahr, Aligarh, Etah, and Farrukhābād. The meater part consists of a level plain crossed by numerous rivers, and much of it requires little irrigation when the rainfall is normal. A high ridge of sand, rarely more than 4 or 5 miles broad, running through the District from north-west to south-east, once formed the old high bank of the Ganges. Between this and the present course of the river is a low tract of country, traversed by a chain of swamps or phile, and by the river The fertile plain north-east of the sandy ridge is watered by the Sot or Yar-i-Wasadar, a river which enters the Bisauli tahsil from Morādābād and flows diagonally across the District, piercing the sandy tract. Although the Mahawa flows in a deep channel, it is liable to sudden floods, which do much damage, and it receives spill-water from the Ganges. The Sot is fringed by ravines and seldom inundates its banks. In the north-east the Ramganga forms the boundary for about 36 miles, and is joined by the Aril.

Geology.

The District consists entirely of Gangetic alluvium, varying from pure sand to stiff clay. Kunkar or calcareous limestone is found in places.

Botany.

The District is well wooded, and the whole of the rich upland tract is studded with beautiful mango groves. north of the Ganges khadar there is thick dhak jungle (Butea frondosa); and the north-east corner still contains part of the celebrated dhāk jungle which formerly sheltered the Katehriyā Rājputs in their frequent contests with the Musalmān rulers of Delhi. On the sandy ridge vegetation is scanty, and thatching grass and kāns (Saccharum spontaneum) spring up where cultivation is neglected.

A tiger was killed in 1893 near the Ganges, but this is an Fauna. extremely rare event. Antelope, wild hog, and nilgai are common, and wolves cause more damage to human life thun in any other District of the United Provinces. Black partridge, quail, water-fowl, and sand-grouse abound, and florican are occasionally met with.

The climate of Budaun resembles that of other Districts in Climate Rohilkhand, being somewhat cooler and moister than the and temadjacent portions of the Doab, owing to the neighbourhood of the hills. The average monthly temperature varies from 53° to 60° in January to 38° and 93° in May and June.

The annual rainfall over the whole District averages 34 Rainfall, inches, varying from more than 36 in the cast to 31 in the west. Fluctuations in the amount are large; in 1883 only 17 inches fell, and in 1874 as much as 56 inches.

Budaun owes its name, according to tradition, to one History. Buddh, an Ahar prince, who founded the city at the beginning of the tenth century. When the forces of Islam were beginning to spread eastwards into India, it was held, as recorded in an inscription found at Budaun, by the Rathor, Lakhana Pāla, eleventh in descent from Chandra, the founder of the dynasty '. The half-legendary hero, Saiyid Sālūr, is said to have stayed for a time in Budaun; but authentic history commences with the victory of Kuth-ud-din Aibak in 1196, who slew the Raja and sacked the city. Shams-ud-din Altamsh obtained the government of the new dependency, which he exchanged in 1210 for the throne of Delhi. Under his successors, Budaun ranked as a place of great importance; and in 1236 it gave a second emperor to Delhi in the person of Ruknud-din, whose handsome mosque, the Jama Masjid Shamsi, still adorns the city of which he had been governor. During the thirteenth and fourteenth centuries the annals of Budaun are confined to the usual local insurrections and bloody repressions which form the staple of Indian history before the advent of the Mughals. In 1415 Mahābat Khān, the governor, rose in rebellion, and the emperor, Khizr Khan, marched against him in vain. After a reign of eleven years' duration, the 1 Epigraphia Indica, vol. 1, p. 63.

rebellious vassal was compelled in 1,126 to surrender to Mubārak Shāh, Khizr Khān's successor. Alam Shāh, the last of the Saiyids, retired to the city in 1450; and during his stay his Wazīr joined with Bahlol Lodī in depriving him of all his dominions, except Budaun, which he was permitted to retain until his death in 1479. His son-in-law, Husain Shah of Jaunpur, then took possession of the District; but Bahlol Lodi soon compelled the intruder to restore it to the Delhi empire. After the establishment of the Mughal power, Humayun appointed governors of Sambhal and Budaun; but they disagreed, and the Sambhal governor, having taken Budaun by siege, put his rival to death. Under the administrative organization of Akbar, Budaun was formed in 1556 into a sarkar of the Subuh of Delhi, which was granted as a fief to Kasim All In Shah Jahan's time the seat of government was removed to Bareilly. The rise of the Robilla power, which centred in the latter town, accelerated the decline of Budaun. In 1719, during the reign of Muhammad Shah, Muhammad Khān Bangash annexed the south-eastern portion of the District, including the city, to Farrukhābād, while the Rohillas, under Ali Muhammad, subsequently seized upon the remainder. In 1754, however, the Rohillas recovered the parganas which had been united to Farrukhahad. Budaun fell, with the rest of Rohilkhand, into the power of the Nawab of Qudh in 1774, and was ceded to the British with other territory in 1801. Shortly afterwards a revolt took place, which was speedily repressed, and the Mutiny of 1857 alone disturbs the peaceful course of civil administration.

News of the outbreak at Meerut reached Budaun on May 15. A fortnight later the treasury guard mutinied, plundered the treasury, and broke open the jail. The civil officers then found themselves compelled to leave for Fatehgarh. June 2 the Bareilly mutineers marched in, and on the 17th Abdur Rahim Khān assumed the government. As usual, disturbances broke out between the Hindus and the Musalman leaders; and in July and August the Muhammadans fought two regular battles with the Rajputs, whom they completely defeated. At the end of August several European fugitives crossed the Ganges into the District and were protected at Datagani by the landholders. After the fall of Walidad Khan's fort at Mālāgarh in Bulandshahr, that rebel chiestain passed into Budaun in October, but found it advisable to proceed to Fatehgarh. On November 5 the Musalmans defeated the Ahars at Gunnaur, and took possession of that tahsil,

hitherto held by the police. Towards the close of January, 1858, the rebels, under Niyaz Muhammad, marched against Fatehgarh, but were met by Sir Hope Grant's force at Shamsābād and dispersed. Niyāz Muhammad then returned to Budaun. On April 27 General Penny's force defeated the rebels at Kakrālā, though the general himself was killed in the action; while Major Gordon fell upon them in the north, Their leaders' fled to Bareilly, and managers near Bisault. were at once appointed to the various parganas on behalf of the British Government. By May 12 Budaun came once more into our hands, though Tantia Topi, with his fugitive army, afterwards crossed this portion of Rohilkhand into Oudh on the 27th. Brigadier Coke's column entered the District on June 3, and Colonel Wilkinson's column from Bareilly on the 8th. Order was then permanently restored.

The principal archaeological remains are at Budaus, Archaeowhere a series of tombs, mosques, and other religious build-logyings remain to mark the former importance of the place.

The District contains 1r towns and 1,087 villages. Owing The to unfavourable seasons the population fell considerably be people. tween 1872 and 1881, but has risen since. The numbers at the four enumerations were as follows: (1872) 934,670, (1881) 906,541, (1891) 925,982, and (1901) 1,025,753. There are five tahsik—Gunnaur, Bisaulī, Sahaswān, Budaun, and Dātāganj—the head-quarters of each being at a place of the same name. The principal towns are the municipalities of Budaun, Sahaswān, Ujhānī, and the 'notified area' of Bilsī. The following table gives the chief statistics of population in 1901:—

	1 22	Number of			l g u	a z ė "		
Tahsil.	drea in square miles.	Towns.	Villages	Population	Population per square mile.	Percentage variation is population is tueen (89) and 1901,	Number of Persons abid to Yead and

District fotal	1,987	11	1,807	10,25,753	516	+10-8	14,784	

Hindus form 83 per cent. of the total and Musalmans 16 per cent. There are 6,116 Christians, chiefly natives. Between 1891 and 1901 the District was prosperous owing to favourable

agricultural conditions, and the increase in population was remarkably large. Almost the whole population speak Western Hinds, the principal dialect being Brij.

Costes and оссираtions.

Ahars are the most numerous Hindu caste, numbering 144,000, or about 16 per cent. of the total. They are a hardy, independent caste, allied to the Ahirs, living by agriculture, and are only found in Rohilkhand and a few adjoining Districts. The other important Hindu castes are Chamars (leather-dressers and cultivators), 134,000; Muraos (cultivators), 86,000; Rājputs, 62,000; Brahmans, 61,000; and Kahars (servants and cultivators), 47,000. The chief Muhammadan tribes are Pathans, 29,000; Shaikhs, 23,000; and Julahas (weavers), 20,000. Agriculture supports more than 67 per cent. of the population, personal services support 5 per cent., general labour 5 per cent., and cotton-weaving a per cent. Raiputs, Shaikhs, and Ahars are the principal holders of land; Muraos and the few Tats in the District are the best cultivators.

Christian mission\*.

The American Methodist Mission opened work in Budaun in 1850, and has recently been very successful in making converts. Of the 6,080 native Christians in the District in 1901, 5,972 were Methodists.

General agricultural conditions.

The fertile plain which includes most of the District is called Katehr and is well cultivated. With good rains it does not nced irrigation, but if necessary temporary wells can be dug at small cost. Wheat and journare here the principal crops, and sugar-cane and rice are grown to some extent. South-west of this lies the sandy ridge of bhur, which is rendered infertile by excessive rain, and in which wells cannot be made. After cultivation in favourable seasons for two or three years a fallow of five to ten years is required. The bhur chiefly produces barley and bajra. The Ganges khadar is generally liable to inundations and to injury from wild animals. Wheat is grown where possible, and fine crops of barley and peas are obtained in good years. Rice is grown largely in the north-east near the Ramganga, and in the south-east near the Sot.

Chief agricultural statistics pai crops,

The ordinary tenures of the United Provinces are found, 2,984 mahāls being held zamīndāri, 1,355 pattīdāri, and and princi- 69 bharyachara. Large estates are few in number, main agricultural statistics for 1903-4 are shown in the table on the next page, in square miles.

> The chief food-crops are wheat and bajra, which covered 583 and 373 square miles respectively, or 37 and 24 per cent. of the net area cropped. Barley, jowar, maize, gram, and rice each cover from 9 to 6 per cent. The area under cotton

is decreasing, but still amounts to about 26 square miles; sugar-cane covers 23, and poppy 59. Indigo cultivation is almost extinet.

Tahsil.	Total.	Cultivated.	Irrigated.	Cultivable waste
Gunaur Bisnuli Sahaswäu Dudaun Dätäganj	370 360 454 385 418	246 322 341 341 311	40 69 54 , 65 64	70 10 : 48 49 62
Total	1,987	1,558	292	239

The great feature of the agriculture of the District is the Improveincrease in the area double cropped, which rose in thirty years ments in
from z per cent. of the total to 21 per cent. In the khādar taral
maize is growing in popularity, as it rises above floods before practice.
the other autumn crops, and sugar-cane is also being more
largely planted. The area under wheat and barley is increasing.
Advances under the Land Improvement and Agriculturists'
Loans Acts are rarely taken except in unfavourable seasons.
Out of 1-3 lakhs advanced from 1890 to 1904 nearly Rs. 72,000
was lent in the famine years 1896-7.

Stud bulls were at one time stationed in the District; but Cattle, none is kept now, and the ordinary breed of cattle is inferior, horses, thouse-breeding is popular, and six stallions are maintained by goats. Government. Sheep and goats are of the ordinary poor type, and the best animals are imported from Rajputana.

Wells are the chief source of irrigation, and in 1903-4 sup-Irrigation. plied 194 square miles, while tanks or jlais supplied 64 and rivers 27. Masonry wells are used for this purpose only in the north of the District, where the spring-level is low. Elsewhere temporary wells are made, lasting for a single harvest. A system of private canals, irrigating about 1,000 acres of rice, has been made in the south-east of the District, where the Sot cuts through the blur and enters the khūdar, and another rough system exists on the Aril. The Mahāwa is not used for irrigation, but the Sot supplies a small area in dry years.

Kankar or nodular limestone is the chief mineral product. Minerals. Lime is occasionally made from this, but more commonly from a kind of calcareous marl.

The chief manufacturing industry is that of sugar-refining. Arts and Indigo was formerly made largely, but very little is prepared manufacturing. Cotton-weaving, carpentry, brasswork, and pottery are

of the ordinary type; a little papier maché work is turned out at Budaun town.

Commerce.

Owing to the poorness of communications, the District has been left behind in the general growth of trade. Bilsī, once the second largest mart for grain in this part of Rohilkhand, is now of small account; and Sahaswān, another centre in the days before railways changed the direction of commerce, has no trade at all. Agricultural produce, chiefly grain and sugar, is exported with difficulty. The imports include cloth, salt, and metals. A large fair is held annually at Kākorā, which is attended by 150,000 people.

Railways and roads.

The branch of the Oudh and Rohllkhand Railway from Barcilly and Aligarh cuts through two portions of the north of the District. A narrow-gauge line from Barcilly through Budaun, opened in 1906, crosses the Ganges and joins the Cawnpore-Achhnerā Railway at Soron in Etah District.

A good deal has been done in recent years to improve the roads in the District, which contains 120 miles of metalled and 445 miles of unmetalled roads. The former are maintained by the Public Works department; but the cost of all but 33 miles is met from Local funds. There are avenues of trees on 126 miles. The chief roads are that leading from Bareilly to Häthras and Muttra, which passes through Budaun town, and a road from Budaun to Aonla railway station. Feeder roads to other stations have been made and internal communications improved; but the south and east of the District are still backward.

Famine.

A native historian records a famine in 1761, during which large numbers of people died and many emigrated. In 1803-4, soon after the commencement of British rule, the harvest failed and many farmers absconded. In the great famine of 1837-8 Budaun suffered the extreme of misery: thousands died of starvation, grain rose to unattainable prices, and the police found themselves powerless to preserve order. The scarcity of 1860-1 was less serious; but relief works were opened and remissions made, and similar measures were required in 1868-9. In 1877 a deficiency in the rainfall caused some distress, but timely rain in October gave relief. The famine of 1896-7 did not affect Budaun appreciably.

District

The Collector is usually assisted by a member of the Indian Civil Service (when available), and by four Deputy-Collectors recruited in India. A tahsildar is stationed at the head-quarters of each tahsil, and an officer of the Opium department at Budaun town.

There are four regular Munsifs, and the District is included Civil in the Civil Judgeship of Shāhjahānpur and in the Sessions justice and Judgeship of Moradabad. Sessions cases are tried by the Additional Judge of the latter District. Budaun holds a bad reputation for violent crimes and for dacoity. infanticide was formerly strongly suspected, and entailed the maintenance of a special police; but in 1904 only 1,141 names remained on the register of persons proclaimed under the Act.

The area now forming Budaun was, at the cession in Land 18or, included in Morādābād. Various changes were made, revenue and in 1823 a District of Sahaswan was formed, which also tration. comprised parts of the present Districts of Etah and Aligarh. By 1845 the District had assumed its present shape. The early settlements were for short periods, and were based on the previous demand or on a system of competition. Rights in land were very lightly prized and were freely transferred. Operations under the improved system, laid down by Regulation VII of 1822, commenced with estates which were being directly managed by the Collector owing to the resignation of proprietors or the failure to find purchasers at sales. The first regular settlement under Regulation IX of 1833 was made between 1834 and 1838. It was preceded by a survey, and rights were completely recorded. The land was valued as the basis of the assessment and a demand of a lakhs was fixed. The next revision took place between 1864 and 1870, on the usual lines. Soils were classified and the rent paid for each class of land carefully ascertained. A rate. usually in excess of this, was assumed as the basis of assessment, and applied village by village, with modifications where necessary. The revenue was raised from 9.3 to 10.3 lakhs. and the new assessment was subsequently found to have been very light. The latest revision was carried out between 1893 and 1898. In this the assessment was made on the recorded rentals, which were found to be, on the whole, reliable. Land was again classified into circles according to the quality of its soil, and rates for each class were ascertained by analysis of the repts actually paid for different kinds of holdings. These rates were used in checking and correcting the recorded rent-In assessing, the revenue was fixed at less than half the accepted 'assets' in cases where there was reason to believe that these could not be collected over a series of years. The new revenue is 13-2 lakhs, representing 46-3 per cent. of the 'assets.' The incidence is a little more than R. 1 an

and 78° 39' E., with an area of 370 square miles. Population increased from 126,440 in 1891 to 162,291 in 1901. There are 313 villages and one town, Gunnaur (population, 6,644), the tahsīl head-quarters. The demand for land revenue in 1903-4 was Rs. 2,16,000, and for cesses Rs. 26,000. The density of population, 439 persons per square mile, is below the District average, though the rate of increase between 1891 and 1901 was higher than in any other tahsīl. Gunnaur lies almost entirely in the Ganges khādar, the high sandy tract characteristic of Budaun only crossing the south-east corner. It is thus liable to floods, but benefits by comparatively dry seasons. A considerable tract is still occupied by jungle. In 1903-4 the area under cultivation was 246 square miles, of which 40 were irrigated, wells being the chief source of supply.

Bisauli Tahsil.—North-eastern tahsil of Budaun District. United Provinces, comprising the parganas of Bisaul, Islāmnagar, and Satāsī, and lying between 28° 8' and 28° 28' N. and 78° 32' and 79° 8' E., with an area of 360 square miles. Population increased from 183,716 in 1891 to 211,507 in 1901. There are 350 villages and three towns, the largest being ISLAMNAGAR (population, 6,367) and BISAULI (5,323), the head-quarters. The demand for land revenue in 1003-4 was Rs. 3,18,000, and for cesses Rs. 38,000. The density of population, 588 persons per square mile, is considerably above the District average. Bisauli is one of the most prosperous talistle in Budaun. It lies almost entirely in the fertile Katchr tract, and is watered by the Sot and Aril rivers. There are also numerous small lakes or ihils. In 1903-4 the area under cultivation was 322 square miles, of which 69 were irrigated, mostly from wells.

Sahaswān Tahsīl.—Tahsīl of Budaun District, United Provinces, comprising the parganas of Sahaswān and Kot, and lying between 27° 57' and 28° 20' N. and 78° 30' and 79° 4' E., with an area of 454 square miles. Population increased very slightly, from 193,070 in 1891 to 193,628 in 1901. There are 328 villages and two towns: Sahaswān (population, 18,004), the tahsīl head-quarters, and Bilsī (6,035). The demand for land revenue in 1903-4 was Rs. 2,33,000, and for cesses Rs. 29,000. The density of population, 426 persons per square mile, is the lowest in the District. The tahsīl contains a fertile stretch of rich upland soil watered by the Sot river, in the tract known as Katehr; but this is mostly held by impoverished and quarrelsome Rājputs, and it also suffers from defective drainage. South of the Katehr a large area

is occupied by a sandy ridge, 4 or 5 miles wide, and poor in quality; and beneath this the khādar stretches away to the Ganges, which forms the south-western boundary. The khādar is crossed by the Mahāwa, which is gradually scouring out a larger bed, and in years of heavy rainfall brings down disastrous floods, increased by the spill-water from the Ganges. Portions of the khādar are extremely fertile, but the tract is liable to great vicissitudes. In 1903-4 the area under cultivation was 338 square miles, of which 54 were irrigated, mostly from wells.

Budaun Tahsil.-Head-quarters tahsil of Budaun District, United Provinces, comprising the parganas of Budaun and Ujhānī, and lying between 27° 50' and 28° 12' N. and 78° 48' and 79° 19' E., with an area of 385 square miles. **Population** increased from 226,673 in 1891 to 243,141 in 1901. are 377 villages and two towns: Budaun (population, 30,031), the District and tahsil head-quarters, and UJHANI (7,017). The demand for land revenue in 1903-4 was Rs, 2,78,000, and for cesses Rs. 39,000. The density of population, 632 persons per square mile, is the highest in the District. A large portion of the tahsil is situated in the fertile Katehr tract, and is watered by the Sot. In the north-east this slopes to the valley of the Aril, and still contains portions of the famous forest which once surrounded Aonla in Bareilly District. 'South-west of the Katehr lies a high ridge of sandy land, 3 or 4 miles wide, from which a stretch of precarious alluvial khādar reaches to the Ganges on the south-west border. In 1903-4 the area under cultivation was 341 square miles, of which 65 were irrigated. Wells supply two-thirds of the irrigated area.

Dātāganj.—Easternmost talisīl of Budaun District, United Provinces, comprising the parganas of Salempur and Usehat, and lying between 27° 40' and 28° 11' N. and 70° 6' and 79° 31' E., with an area of 4x8 square miles. Population increased from 190,083 in 1891 to 215,186 in 1901. There are 385 villages and three towns, the largest being ALAPUR (population, 6,327) and KARRALA (5,954). The demand for land revenue in 1903-4 was Rs. 2,85,000, and for cesses Rs. 35,000. The density of population, 515 persons per square mile, is almost the same as the District average. The tahsil is bounded by the Ganges on the south, and by the Rāmgangā on the east. The northern portion is crossed by the Aril, a tributary of the latter, and by many small channels. while the Sot traverses the southern portion. The natural moisture and the character of the soil are peculiarly favourable to the growth of rice, which this tahsīl produces largely. A considerable area in the south is watered by a system of private canals taken from the Sot, of some antiquity. As a whole the upland area is inferior to the rich Katehr tract found in other tahsīls of this District, while the areas bordering on the Rāmgangā and Ganges are liable to disastrous floods. In 1903-4 the area under cultivation was 311 square miles, of which 64 were irrigated. Wells supply half the irrigated area, and tanks or jhūls and rivers the remainder in about equal proportions.

Alāpur.—Town in the Dātāganj talsīl of Budaun District, United Provinces, situated in 27° 55' N. and 79° 15' E., 12 miles south-east of Budaun town. Population (1901), 6,327. The town is said to have been founded by the emperor Alā-ud-dīn Alam Shāh after his abdication in 1450. The only building of any interest is the mosque built during the time of Aurangzeb, which, however, contains a fragment of an older inscription dated 1307. Alāpur is administered under Act XX of 1856, with an income of about Rs. 900. A market, held twice a week, is of some local importance. The middle school has 86 pupils.

Bilsī.—Town in the Sahaswān tahsīl of Budaun District, United Provinces, situated in 28° 8' N. and 78° 55' E., 16 miles west of Budaun town. Population (1901), 6,035. The town was founded towards the close of the eighteenth century, and owes its name to one Bilasi Singh. In the first half of the nineteenth century the new road system gave great advantages to Bilsī, which became the second trading centre in the neighbourhood. The railway, however, passed Bilsī at a distance of 20 miles and it has lost its trade, while its prosperity has further decreased owing to the decline in indigo, which was largely manufactured here. From 1884 to 1904 Bilsī was administered as a municipality, with an income and expenditure of about Rs. 3,000. In 1904 it was reduced to the position of a 'notified area.' It contains a primary school with 94 pupils and a small girls' school, besides a dispensary and a branch of the American Methodist Mission.

Bisauli Town.—Head-quarters of the talsīl of the same name in Budaun District, United Provinces, situated in 28° 18' N. and 78° 57' E., 23 miles north-east of Budaun town. Population (1901), 5,323. The town first became of importance under Dunde Khān, lieutenant of Alī Muhammad and Hāfiz Rahmat Khān, the celebrated Rohilla chiefs, who built a fort here about 1750. After the fall of the Rohilla power Bisauli

declined. Near the town is Dunde Khān's tomb, which stands on a commanding spot overlooking the broad valley of the Sot. Bisauli contains a tahsili, a munsifi, a dispensary, and a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income of about Rs. 1,400. The trade of the place is purely local. The tahsili school has 117 pupils, and there is a small girls' school.

Budaun Town (Budayun).-Head-quarters of the District and tahsil of the same name, United Provinces, situated in z8° z' N. and 79° 7' E., on a branch of the Rohilkhand and Kumaun Railway from Bareilly to Soron, and on the road from Bareilly to Muttra. Population (1901), 39,031, of whom 21,995 were Musalmans and 16,033 Hindus. According to tradition, the town was founded by a mythical Raja Buddh, an Ahat by easte, about A.D. 905, or by a descendant of his named Ajayapāla. An inscription, dating probably from the early part of the twelfth century, records the founding of a temple and mentions a list of eleven Rathor kings reigning at Budaun. which is called Vodamayuta1. Legend relates that the town was taken by Saiyid Salar in 1028; but the first historical event is its capture by Kuth-ud-din in 7106, when the last Hindu king was slain. Budaun then became an important post on the northern boundary of the Delhi empire, and its governors were chosen from distinguished soldiers who had constantly to face revolts by the turbulent Katebriya Raiputs. Two of its governors in the thirteenth century, Shams-ud-din Altamsh and his son Rukn-ud-din Firoz, passed from Budaun to the throne at Delhi. In the fifteenth century Mahābat Khān, the governor, imitated the example of the Jaunour ruler and -became independent for a time. About 1450 Ala-ud-din, the last of the Saiyid kings of Delhi, after abdicating the throne. retired to Budaun, where he lived for twenty-eight years. 1371 the town was destroyed by fire; and in the reign of Shah Jahan, nearly a century later, the governor of the sarkar was transferred to Bareilly, and the importance of Budaun declined. For a time it was included in the State formed early in the eighteenth century by the Nawab of Farrukhabad; but it then passed to the Robillas. In 1838 it became the head-quarters of a British District. On the outbreak of the Mutiny in May. . 1857, the treasury guard at Budaun rose, and being joined by the townspeople broke open the jail, and burned the civil A native government was then established and remained in power till General Penny's victory at Kakrālā 1 Epigraphia Indica, vol. i, p. 63.

in the following April, when the rebel governor fled the city, and order was again re-established.

Budaun stands about a mile east of the river Sot, and consists of two parts, the old and new town. In the former are the remains of the old fort, with massive ramparts once so wide that four carriages could be driven abreast. The Jama Masjid, built in 1223 by Shams-ud-din Altamsh, largely from the materials of the temple referred to above, is an immense building 276 feet long by 216 broad, with a central dome restored in Akbar's time. It stands high and is an imposing feature in the landscape for many miles. Numerous smaller mosques and dargahs remain as memorials of the palmy days of Pathan and Mughal rule1. In the neighbourhood are graveyards filled with mouldering tombs, chief among which may be mentioned that of Sultan Ala-ud-din and his wife. Budaun is also famous as having been the birthplace of the historian Badāyūnī, the rival of Abul Fazl. The chief modern public buildings are the District courts, the jail, a commodious dispensary, two large sarais, and a small leper asylum; and a park is now being laid out. Budaun is a centre for the work of the American Methodist Mission in the District. The municipality was constituted in 1884. During the ten years ending 1900-1 the income averaged Rs. 35,500 and the expenditure Rs. 34,500. In 1903-4 the income was Rs. 57,000, including Rs. 32,000 from octroi and Rs. 15,000 from rents; and the expenditure was Rs. 56,000. The municipality has Rs. 10,000 invested. Budaun is not now a great trade centre; but its former proximity to the railway, as compared with Bilsī, has given it some advantages which may increase now that a line actually passes through it. The grain market, called Carmichaelgani after a former Collector, belongs to the municipality. Papier mâché pen-boxes made here have some reputation. The District school has 160 pupils, a mission school 120, and the taksili school 270. The municipality manages 10 schools and aids 16 others attended by more than 1,000 pupils.

Gunnaur Town.—Head-quarters of the tahsil of the same name in Budaun District, United Provinces, situated in 28° 14' N. and 78° 27' E., 4 miles south of the Babrālā station of the Oudh and Rohilkhand Railway. Population (1901), 6,644. The town was the head-quarters of a mahāl or pargana under Akbar, but its early history is legendary. It is chiefly composed of mud huts with a few brick houses, and contains a dispensary and a branch of the American

<sup>1</sup> Journal, Asiatic Society of Bengal, vol. xli.

Methodist Mission. Gunnaur is administered under Act XX of 1856, with an income of about Rs. 1,000. A good deal of trade passes through the place to Babrālā station. There are a middle school with 90 pupils and a girls' school with 15.

Islāmnagar,—Town in the Bisaulī tahsīt of Budaun District, United Provinces, situated in 28° 20' N. and 78° 44' E., 6 miles south-cast of the Bahjoī station on the Oudh and Rohilkhand Railway. Population (1901), 6,367. During the Mutiny, in May, 1858, there was a skirmish near this place between a body of rebels and the troops of the loyal Nawāb of Rāmpur, the latter being victorious. The town is administered under Act XX of 1856, with an income of about Rs. 1,500. It is the chief market in the neighbourhood for agricultural produce, and there is a large export of raw sugar. It contains a dispensary and a middle school with 112 pupils.

Kākorā.—Village in the District and talist of Budaun, United Provinces, situated in 27° 53′ N. and 79° 3′ E., near the bank of the Ganges, 12 miles south-west of Budaun town. Population (1901), 2,941. The place is noted for a religious and trading fair held at the full moon of Kārtik (October-November), which is attended by as many as 100,000 to 200,000 persons, who come from all parts of Rohilkhand, as well as from Delhi, Muttra, and Cawnpore. The principal object is bathing, but a good deal of trade is carried on in cloth, metal goods, leather, and cattle. The actual site of the fair varies within a few miles according to the movements of the river.

Kakrālā.—Town in the Dātāganj tahsīl of Budaun District, United Provinces, situated in 27° 53' N. and 79° 12' E., 12 miles south of Budaun town. Population (1901), 5,954. The name is said to have been derived from kankar or nodular limestone, which is largely found in the neighbourhood. In April, 1858, General Penny defeated near Kakrālā a party of Ghāzīs or fanatical Musalmāns, who were lying in ambush for him. This victory put an end to the rebel government which had ruled at Budaun for eleven months. The town contains a sarai, and a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income of about Rs. 1,000. The primary school has 75 pupils.

Sahaswan Town.—Head-quarters of the tabsil of the same name in Budaun District, United Provinces, situated in 28° 4′ N. and 78° 45′ E., near the left bank of the Mahawa, 24 miles west of Budaun town by metalled road. Population (1901), 18,004. According to tradition, the town was founded

by Sahasra Bāhu, a king of Sankīsā in Farrukhābād District, who built a fort now represented by an earthen mound. Ain-i-Akhari records this place as the chief town of a mahal or pargana. In 1824 Sahaswan became the head-quarters of a British District, which were removed to Budaun owing to the unhealthiness of the site. The town is really a collection of scattered villages, standing at the point where the sandy ridge of the District meets the Ganges khādar. It contains a tahsīlī. a munsifi, and a dispensary. A municipality was constituted in 1872. During the ten years ending 1901 the income and expenditure averaged Rs. 8,000. In 1903-4 the income was Rs. 14,000, chiefly from a tax on circumstances and property (Rs. 6,000); and the expenditure was Rs. 13,000. The town has little commercial importance; but perfumes are manufactured, especially from the keora or screw pine which grows in the neighbourhood. The middle school has 160 pupils, and the municipality manages six schools and aids three others with a total attendance of 300.

Ujhānī,—Town in the District and tahsil of Budaun, United Provinces, situated in 28° 1' N. and 79° 1' E., on the Rohilkhand and Kumaun Railway, 8 miles west of Budaun town. Population (1901), 7,917. According to tradition, it was originally called Piparia, from the number of papal trees here, and the name was changed by Mahipāl of Ujjain. Under the Rohillas it became the residence of Abdullah Khan, second son of Alī Muhammad, who died here of snake-bite. Shortly after British rule commenced, a revolt was raised at Ujhānī over the collection of revenue. The town, though chiefly built of mud, has a flourishing appearance, and the main streets are paved. The mosque and unfinished tomb of Abdullah Khan are the principal buildings. The American Methodist Mission has a branch here. Ujhānī has been a municipality since 1884. During the ten years ending 1901 the income and expenditure averaged Rs. 5,000. In 1903-4 the income was Rs. 7,000, of which Rs. 3,000 came from a tax on circumstances and property; and the expenditure was Rs. 7,000. There is a small export trade in glu, sugar, and grain; and sugar-refining is the chief industry. Indigo was formerly manufactured largely, but the trade has declined. The municipality manages two schools and aids two others, attended by 328 pupils.

Moradabad District.-District in the Bareilly Division, daries.con-United Provinces, lying between 28° 20' and 29° 16' N. and figuration, and river 78° 4' and 79° o' E., with an area of 2,285 square miles. On system,

the north it is bounded by Bijnor and Naini Tai; on the east by the State of Rampur; on the south by Budaun; and on the west the Ganges divides it from the Districts of Meerut and Bulandshahr. Near the Ganges lies a stretch of low khādar land, from which rises a high sandy ridge. The central portion of the District comprises a fertile level plain, chiefly drained by the Sot or Yār-i-Wafādār river, into which many smaller channels flow. This plain sinks gradually into the broad valley of the Rāmgangā, which crosses the north-east corner of the District, cutting off a portion which borders on the Tarai and presents the usual characteristics of the sub-Himālayan tracts; many small streams rising for the most part in the Tarai flow through it. There are a few ponds in the District, but none of considerable size.

Geology.

Morādābād consists almost entirely of alluvium, in which boulders of stone are occasionally found. Kankar or calcareous limestone is obtained in all parts south-west of the valley of the Rāmgangā. The saline efflorescence called reh is found in the southern part of the Ganges khādar.

Botany.

The sandy tracts in the west are extremely bare, and produce nothing spontaneously except long thatching-grass. In the richer tract near the centre trees are more common, especially near the older towns, which are shaded by fine mango groves. On the whole the District is not well wooded.

Fauna.

Tigers are occasionally shot in the jungles in the north-cast of the District or in the Ganges khādar, and leopards are more common. Hog deer and wild hog are numerous in the same tracts, and nilgai are found in small numbers. The wolf, fox, ladger, otter, weasel, porcupine, and monkey are found more or less throughout the District. The commoner game-birds include quail, sand-grouse, grey and black partridge, wild duck of many varieties, snipe, wild goose, &c. Fish of many kinds are found in the rivers, and form an important element in the food-supply of the people.

Climate and temperature. The climate of Moradabad is generally healthy, except in the submontane truct which borders on the Tarai, and in the lowlands of the Ganges and Sot. The temperature is cooler than in Districts west of the Ganges and farther from the Himalayas, and frost is common in the winter. The annual mean is about 75°, the minimum monthly temperature 56° in January, and the maximum 90° to 92° in May or June.

Rainfali.

The annual rainfall averages about 40 inches, varying from 35 inches in the sandy tract to 45 in the damp submontane area in the north-east. Variations are consider-

able, and the amount has ranged from about 20 to nearly 60 inches.

Tradition ascribes great antiquity to SAMBHAL, but very History. little is known of the early history of the District. Prithwi Rāj, the last Hindu king of Delhi, is said to have fought, first with the half-mythical Saivid Salar, and later with Iai Chand. king of Kanauj. The first historical events are, however, in the early Muhammadan period. Sambhal became the seat of a series of governors, whose duties were largely taken up with suppressing revolts of the turbulent Katehriyas. In 1266 Ghiyas-ud-din Balban attacked Amroha, where he ordered a general massacre. In 1365 Firoz Tughlak invaded Katehr. as Rohilkhand was then called, to punish a chief named Rai Kakāra, who had murdered the Musalman governor. Rai Kakāra fled to Kumaun, whereupon the emperor plundered the country, and left Malik Khitab as governor. Ibrahim, the famous Sultan of Jaunpur, conquered Sambhal in 1407, and placed his own deputy in the town; but a year later Mahmud Tughlak, emperor of Delhi, expelled the intruder, and replaced his own officials. In 1473, under Sultan Husain, the Jaunpur dynasty once more established itself for a while in Sambhal. The emperor Sikandar Lodi recovered the District in 1408 for the Delhi throne, and resided at Sambhal for four years. Thenceforward the surrounding country remained a permanent fief of the imperial court. In the middle of the sixteenth century. Ahya Maran, governor of Sambhal, rebelled against Sultan Muhammad Adil, and defeated a force sent against him by the emperor. In the succeeding year, Rājā Mittar Sen, Katehriyā, seized Sambhal, and Ahya Maran attacked him. A fierce battle ensued at Kundarkhi, in which the Rājā sustained a crushing defeat. Under Humāyūn, Alī Kulī Khān was governor of Sambhal and repelled an incursion of the still-In 1566 some Mirzas, descendants independent Katehriyās. of Timur, rebelled and seized Akbar's officers, whom they confined in the fort of Sambhal. Husain Khān marched against them, and they fled to Amroha. On his following them up to their retreat, they finally escaped across the Ganges. Shāh Jahān appointed Rustam Khān governor of Katehr: and the latter founded Moradabad about 1625, calling it after Murad Bakhsh, one of the imperial princes, who was afterwards murdered by Aurangzeb. After the death of that emperor, and subsequent decline of the central power, the Katchriyas revolted, becoming independent for a time, and the Musalman governor removed his head-quarters to Kanauj.

On the rise of Ali Muhammad, the Rohilla chief, an attempt was made by the governor of Morādābād to crush him, but the new leader was victorious and by 1740 had acquired the whole of this District. Rohilla rule lasted till 1774, when Rohilkhand became subject to Oudh, and the District passed to the British with other territory by the cession of 1801c Very soon afterwards, in 1805, the notorious Andr Khān, a native of Sambhal, swept through the District with a swarm of Pindāri horsemen, but was not successful in his attempt to plunder the Government treasury.

Apart from a few serious riots the District remained peaceful till 1857. News of the Meerut rising arrived on May 12 in that year, and on the 18th the Muzaliamagar rebels were captured. Next day, however, the 20th Native Infantry mutinied, and broke open the jail; but on the arst they united with the artillery in repelling a Rampur mob. the 31st the Rampur cavalry, who had gone to Bulandshahr, returned; and on the succeeding day news of the Bareilly and Shāhjahānpur outbreaks arrived. On June 3 the 29th Nauve Infantry fired on the officials, who then abandoned the station, and reached Meerut in safety on the 5th. Ten days later, the Bareilly brigade arrived at Moradabad, and shortly afterwards marched on for Delhi, taking with them the local mutineers. At the end of June, the Nawab of Rampur took charge of the District for the British; but he possessed little authority, and a rebel named Majju Khān was the real ruler of Moradabad, till the arrival of General Jones's brigade on April 25, 1858, when he was hanged. Early in May the District was occupied by Mr. (afterwards Sir S.) Crncroft Wilson, the Judge of Moradabad, with a body of troops, and order was restored.

Archaeology. Many ancient mounds exist in the District, especially in the Bilārī tahsīl, but they have not been explored. Amroha and Sambhal contain some fine mosques and shrines, and the former has also a few Hindu remains. Morādābād city dates only from the seventeenth century.

The people.

There are 15 towns and 2,450 villages in the District. Population is increasing steadily, though variations occur in different areas owing to the vicissitudes of the seasons. The numbers at the four enumerations were as follows: (1872) 1,122,357, (1881) 1,155,173, (1891) 1,179,398, and (1901) 1,191,993. There are six taksīts—Morādārād, Thākurdwārā, Bilārī, Samehal, Amroha, and Hasanpur—each named from its head-quarters. The principal towns are the

municipalities of Moradabad, Chandausi, Amroha, and SAMBHAL. The chief statistics of population in 1901 are shown below:-

	S No		mber of	į į	ا ا ا ا ا	, 2 g 2 .	-22
Tahsīl.	Area in square miles.	Towns	Villages.	Population	Population per square mile.	Percentage variation population tween 185	Number of persons able to read and write.

District total	547 2,285	15	2,450	1,191,993	294 521	+ 4.8	25,190

About 64 per cent. of the total are Hindus and 35 per Castes and cent. Musalmans, the latter being a high proportion. Chris-occupatians number 6, 103, and Aryas 2,834. Morādābād is the headquarters of the Arya Samāj in the United Provinces. More than 99 per cent. of the population speak Western Hindi, the prevailing dialect being Hindustani.

The most numerous Hindu caste is that of the Chamars (leather-dressers and cultivators), who form more than 21 per cent. of the total. Other important castes are Jats, 71,000; Rājputs, 62,000; Brāhmans, 44,000; Khāgīs (cultivators), 41,000; and Ahars (agriculturists), 37,000. Jāts are not found in considerable numbers east of this District; while Ahars and Khāgīs chiefly reside in and near it. Bishnoīs, a small caste with 1,600 members, which was originally a religious sect, are hardly found elsewhere in the United Provinces. More than one-third (153,000) of the Musalmans are so-called Shaikhs, many of whom are descended from converts, while the Julahas (weavers), 33,000; Barhais (carpenters), 23,000; and Telis (oil-pressers), 16,000, are also largely of Hindu origin. The Saivids, numbering 16,000, are the most considerable of the foreign tribes. About 62 per cent. of the total population are supported by agriculture, more than 6 per cent. by personal services, nearly 5 per cent. by general labour, and 3 per cent. by weaving.

Of the 5,866 native Christians in 1901, 4,780 were Metho-Christian dists. The American Methodist Church commenced work in missions. 1859, and the American Reformed Presbyterian Church in 1894.

General agricultural conditions.

The Ganges khādar is raised in the centre and escapes ordinary floods, but the lower portions are liable to inundation and to over-saturation. This tract chiefly produces wheat, rice, and sugar-cane. Above the khadar is a broad sandy tract, consisting of ridges separated by level plains and minor drainage channels. The land is poor and liable to waterlogging in wet years, while crops fail in seasons of drought. Wheat, mixed with borley, and bajra are the chief crops. The great central plain is a fertile tract, known as Katehr, which produces wheat, jowar, bajra, rice, and sugar-cane. In the Ramganga khādar floods frequently occur, and the autumn harvest is liable to great loss; but wheat, rice, and sugar-cane are grown. Rice is the principal crop grown in the damp submontane area north-east of the Ramganga. In good years irrigation is hardly required. A striking feature of the cultivation is the distribution of manure in all parts of a village where sugar-cane is grown, instead of its concentration on the fields near the village site.

Chief ngricultural statistics

The ordinary tenures of the United Provinces are found; but samindari mahals are more common than pattidari, and and princi- bhaiyāchārā mahāls are rare. A large number of separate pal crops. blocks of land are found in the Amroha tahsil, the owners of which have no connexion with the village communities. About half of the mahals in the same tahsil are revenue-free, subject to a peculiar quit-rent payable to Government. agricultural statistics for 1902-31 are shown below, in square miles :-

Ta	ħ377.	,		Total.	Cultivated	Irrigated.	Cultivable waste,

Wheat is the crop most largely grown, covering 599 square miles, or 35 per cent. of the total cultivated area. Rice (152 square miles), bajra (260), barley (160), gram (125), and jozuár (50) are also important food-crops. The most valuable crop is, however, sugar-cane, grown on 70 square miles. Cotton.

<sup>1</sup> Later figures are not available, being to actilement operations.

oilseeds, and hemp (san) are the remaining products of importance.

There have been no marked improvements in agricultural Improvepractice, and no increase in cultivation in recent years. The ments in area double cropped is probably increasing, and the more tural valuable crops-wheat, sugar-cane, and rice-are being more practice. The cultivation of poppy is spreading. largely grown. Advances under the Agriculturists' Loans and Land Improvements Loans Acts are rarely taken. The total amounted to only Rs. 56,000 between 1892 and 1904, and Rs. 45,000 of this sum was advanced in two unfavourable seasons.

The cattle bred in the District are of the ordinary inferior Cattle. type. Something has been done to improve the breed of horses, horses and ponies, and Government maintains one stallion goats. and the District board six, besides three donkey stallions for mule-breeding. The sheep and goats are inferior.

Masonry wells are rarely used for irrigation, except in the Irrigation. south of the rich Katehr tract: but earthen wells lasting for a single harvest can be made in most parts of the District. except in the sandy tract above the Ganges khādar. Out of 121 square miles irrigated in 1903-4, wells supplied 89, tanks or ihils 18, and rivers 14. In drier years the rivers are more largely used.

Kankar or nodular limestone is the only mineral product. Minerals. and is used for metalling roads and for making lime.

The chief industry in the District is sugar-refining, which is Arts and carried on in many places after native methods. Cotton cloth manufacis woven, especially in the towns, and woollen carpets are made in a few places. Moradabad city is known for the ornamental brassware produced there, and other local industries are the pottery of Amroba and the manufacture of rough glass in the south-west of the District, where reh is found. Cottonweaving is said to be declining. There are four cotton gins and presses at Chandausi, besides one steam press and several hand presses for baling hemp (san).

Agricultural products form the chief exports, sugar being the Commerce. most important, followed by wheat, rice and other grains, and cotton. A good deal of the trade is with Calcutta, but the old trade with Delhi has been revived by a railway extension. Salt. tobacco, metals, and piece-goods are the principal imports. The largest commercial centre after Morādābād is Chandausi, and there are several smaller flourishing market towns.

The main line of the Oudh and Rohilkhand Railway passes Railways through the north-east of the District, while the south is crossed and roads. by the Bareilly-Alīgarh branch through Chandausī, whence another line runs to Morādābād city. A branch from Morādābād to Ghāziābād on the East Indian Railway traverses the north-west of the District. Another branch from Gajraula to Chāndpur in Bijnor has been surveyed, and a branch of the Rohilkhand and Kumaun Railway is being constructed from Morādābād to Rāmnagar. There are 118 miles of metalled roads and 473 miles of unmetalled roads. The cost of all but 52 miles of the former is met from Local funds, but the Public Works department has charge of all the metalled roads. Avenues of trees are maintained on 119 miles. The main route is that from Bareilly through Morādābād city to the Ganges and on to Meerut. Communications are, on the whole, not good beyond the few metalled roads.

Famine.

The District has suffered repeatedly from scarcity, but has escaped visitations of great severity. In 1803-4 distress was chiefly due to losses caused by the Maratha invasions and the raids of the Pindari freebooter, Amir Khan. The second famine after cession, in 1825, was aggravated by rack-renting, and the throwing of lands out of cultivation by landholders in view of the approaching settlement. In the famine of 1837-8, Morādābād, like all Rohilkhand Districts, suffered less than the Doab. The famine of 1860-1 was aggravated by the effects of the Mutiny. Relief works were undertaken, but this was not among the Districts where distress was most Relief was again necessary in 1868-9 and in 1877-8, but the number of workers never became high. In the latest famine of 1806-7 the labouring classes were distressed, but the cultivators suffered comparatively little, and the number on relief was only about 7,000.

District

The Collector is usually assisted by a member of the Indian Civil Service, and by five Deputy-Collectors recruited in India, A tahsīldār is stationed at the head-quarters of each tahsīl.

Civil justice and crime.

There are five District Munsifs. The District Judge, an Additional Judge, and the Sub-Judge have civil jurisdiction over the neighbouring District of Bijnor. Both Bijnor and Budaun are included in the Sessions Judgeship of Morādābād. Serious crime is heavy, and offences against public tranquillity and crimes of violence are especially common. Religious differences, both between Hindus and Musalmāns, and between the Sunni and Shiah sects of the latter, have caused serious riots from time to time. Female infanticide was formerly suspected, but no repressive measures are now necessary.

At cession in 1801 ROHILKHAND was divided into two Land Districts called Moradabad and Bareilly, the former including, revenue besides its present area, the District of Bijnor, parts of Budaun, tration, Bareilly, and the Rampur State. Bijnor was made a separate subdivision called Northern Morādābād in 1817, and Budaun was taken away in 1822. The early settlements were for short periods, and proprietary rights were only gradually recognized, the system being practically a farm to the highest bidder. A feature of the early settlements was the inquiry into the terms on which the very numerous revenue-free grants were held. The District was surveyed between 1831 and 1836, and the first regular settlement under Regulation IX of 1833 was carried out between 1840 and 1843. It involved a summary inquiry into rents actually paid in each village: but the 'assets' assumed as the basis of the assessment were yery roughly estimated, and a good deal of reliance was placed on the reports of the kānungos as to the annual value of villages. The revenue assessed amounted to 11.5 laklis. which rose to 12 lakhs during the currency of settlement owing to additions to the District area. In the Thakurdwara talist, which is dependent on rice cultivation, a succession of bad seasons ruined the zamindars, who had fallen into the clutches of a usurer, and from 1860 to 1863 the talist was taken under direct management. Elsewhere the settlement worked well. The next revision was carried out between 1872 and 1880. Soils were carefully classified, either according to the estimate of their productive value formed by the Settlement officer, or according to their physical characteristics. Rates were then ascertained for application to these. In some parts of the District cash rents were paid, and these were carefully analysed and rent rates were selected, which were applied with necessary corrections to the large area of land paying rent in kind. The revenue fixed was 14-3 lakhs, amounting to half the assumed 'assets.' This has been raised by small alterations to 14-6 lakhs, which falls at an incidence of Rs. 1.3 per acre, varying from R. 0.6 to Rs. 1-8 in different parts. A new revision of settlement commenced in 1905.

The total collections on account of land revenue, and revenue from all sources, have been, in thousands of rupees:-

	1880-1.	1890-t.	1900-1.	1903-4.
Land revenue . Total revenue .	13,36	13,88	15,51	14,61
	18,14	22,09	14,48	24,17

was Rs. 2,58,000, and for cesses Rs. 47,000. The density of population, 784 persons per square mile, is the highest in the District, owing to the inclusion of the city. A large part of the tahsil forms the valley of the Rāmgangā and is liable to inundation, but it is generally fertile and irrigation is easy when required. In 1902-3 the area under cultivation was 221 square miles, of which only 19 were irrigated. Wells supply about half the irrigated area, and tanks or jhils and rivers the remainder in equal proportions.

Thakurdwara Tahsil.-Northern tahsil of Moradabad District, United Provinces, conterminous with the pargana of the same name, lying between 28° 56' and 29° 16' N. and 78° 30' and 78° 55' E., with an area of 240 square miles. Population fell from 121,174 in 1891 to 116,814 in 1901. There are 261 villages and one town, THAKURDWARA (population, 6,111). the tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 1,87,000, and for cesses Rs. 32,000. The density of population, 487 persons per square mile, is below the District average. The tahsil is a submontane tract, cut up by numerous small streams, none of which is of importance. The Ramganga, into which they fall, flows near the western border. The staple crop is rice, but sugar-cane is also grown largely. In 1902-3 the area under cultivation was 164 square miles, of which 14 were irrigated. Wells and rivers each supply about two-fifths of the irrigated area,

Bilārī.—South-eastern tahsil of Morādābād District. United Provinces, conterminous with the pargana of the same name, lying between 28° 22' and 28° 48' N. and 78° 39' and 78° 58' E., with an area of 333 square miles. Population fell from 231.047 in 1891 to 216,340 in 1901. There are 387 villages and three towns, the largest of which are CHANDAUSI (population, 25,711), and Bilari (4,766), the taksil head-quarters. The demand for land revenue in 1903-4 was Rs. 3,38,000, and for cesses Rs. 57,000. The density of population, 650 persons per square mile, is considerably above the District average. Most of the talisil is a fertile level plain, richly wooded, and requiring artificial irrigation more than any other portion of the District. The Gangan forms part of the northern boundary. and the Aril and Sot cross the centre and southern portions. Sugar-cane is the most profitable crop, but wheat covers the largest area. In 1902-3 the area under cultivation was 270 square miles, of which 34 were irrigated, mostly from wells.

Sambhal Tahsīl,-South central tahsīl of Morādābād

District, United Provinces, conterminous with the pargana of the same name, lying between 28° 20' and 28° 49' N. and 783 24' and 78° 44' E., with an area of 469 square miles. Population increased from 245,619 in 1891 to 245,886 in 1901. There are 466 villages and three towns: Sambhal (population. 39,715), the tahsil head-quarters, Solah Sarai (10,623), and Sirsī (5,894). The demand for land revenue in 1903-4 was Rs. 3,55,000, and for cesses Rs. 61,000. The density of population, 524 persons per square mile, is about the District average. In the east of the tahsil the soil is sandy and agriculture is precarious, but the rest consists of fertile loam, including some of the best villages in the District. The Sot or Yār-i-Wafādār drains the central portion, and smaller. channels cross the south. Wheat and sugar-cane are the most important crops. In 1902-3 the area under cultivation was 399 square miles, of which 25 were irrigated, mostly from wells.

Amroha Tahsil.—North central tahsil of Moradabad District, United Provinces, conterminous with the pargana of the same name, lying between 28° 46' and 29° 9' N. and 78° 20' and 78° 43' E., with an area of 383 square miles. Population increased from 186,183 in 1891 to 206,564 in 1901. There are 508 villages and two towns: AMROUA (population, 40,077), the talist head-quarters, and Kanth (7,092). The demand for land revenue in 1903-4 was Rs. 1,34,000, and for cesses The density of population, 539 persons per Rs. 46,000. square mile, is above the District average. In the east of the talist is a high sandy tract, well drained, but including extensive areas of scrub jungle, while the western portion consists of open plains with hardly a bush to relieve its monotony. The Gangan and its tributaries cross the north-east and the Sot rises in a swamp near Amroha. In 1902-3 the area under cultivation was 304 square miles, of which only 19 were irrigated, wells being the chief source of supply.

Hasanpur Tahsil.—Western tahsil of Morādābād District, United Provinces, conterminous with the pargana of the same name, lying along the Ganges between 28° 26' and 29° 4' N. and 78° 4' and 78° 26' E., with an area of 547 square miles. Population increased from 153,680 in 1891 to 161,020 in 1901. There are 530 villages and three towns, the largest of which are HASANPUR (population, 9,579), the tahsil head-quarters, and BACHHRAON (7,452). The demand for land revenue in 1903–4 was Rs. 1,90,000, and for cesses Rs. 34,000. The density of population, 294 persons per square mile, is the lowest in the Dis-

trict. The east of the talist consists of a high sandy tract, which suffers from either excess or deficiency of rainfall. Between this and the Ganges lies a stretch of low khādar land with bleak sandy wastes, reed jungle alternating with patches of rich cultivation. The Mahāwa rises in the khādar, while a long winding marsh marks its eastern boundary at the foot of the sandy ridge. In 1902-3 the area under cultivation was 315 square miles, of which only 16 were irrigated, chiefly from wells.

Amroha Town.—Head-quarters of the talsil of the same name in Morādābād District, United Provinces, situated in 28° 54′ N. and 78° 28′ E., on the Oudh and Rohilkhand branch line from Morādābād city to Ghāziābād on the East Indian Railway. Population (1901), 40,077. The founding of the city is attributed variously to a ruler of Hastināpur, or to a sister of Prithwī Rāj; but the first historical event connected with it is the arrival of Ghiyās-ud-dīn Balban in 1266, to put down a rebellion in Katehr. In 1304 the Mongols invaded Hindustān, but were defeated near this town by the imperial troops. Early in the fourteenth century the celebrated saint, Sharf-ud-dīn, commonly known as Shāh Wilāyat, made Amroha his head-quarters, and is claimed as ancestor by many of the Saiyids who now reside there. From about the same time the importance of the town decreased, Sambhal taking its place.

Amroha is situated on a low site, the country on each side being of some elevation. It is surrounded by a belt of fine mango groves, and a large gateway and the remains of an ancient wall give the place an air of some importance. The main streets are neat and clean, and many of the shops have handsome fronts of carved wood; but the large blank walls of the houses belonging to the Muhammadan gentry present a gloomy appearance. Besides a few Hindu remains there are more than 100 mosques, and the Jama Masjid is one of the oldest existing buildings. It was originally a Hindu temple, converted to its present use at the end of the thirteenth century; and it contains the shrine of Shaikh Saddu, a former attendant of the mosque. Saddu is believed to have practised magic, and his shrine and that of Shah Wilayat are visited by crowds of Musalmans and low-class Hindus. Amroha contains a tahsīlī, a munsifī, male and female dispensaries, and a branch of the American Methodist Mission. It has been a municipality since 1870. During the ten years ending 1901 the income and expenditure averaged Rs. 22,000. In 1903-4 the income was Rs. 32,000, chiefly from octroi (Rs. 28,000); and the expenditure was Rs. 35,000. There is a good deal of local trade, which may be expected to increase owing to the new railway. Cloth and ornamental pottery are the chief manufactures. The high school has 82 pupils, and there are also a middle school with 176, and nine municipal schools with 610 pupils.

Bachhraon.—Town in the Hasanpur talsīl of Morādābād District, United Provinces, situated in 28° 56' N. and 78° 15' E., 41 miles west of Morādābād city. Population (1901), 7,452. According to tradition, it was founded in the time of Prithwi Rāj. The town contains several mosques and a temple. It is administered under Act XX of 1856, with an income of about Rs. 1,300. A primary school has 78 pupils.

Chandausi.—Town in the Bilari tahsil of Moradabad District. United Provinces, situated in 28° 27' N. and 78° 47' E., at the junction of branches of the Oudh and Rohilkhand Railway from Moradabad and Barcilly to Aligarh. Population (1901), 25,711. Till the middle of the nineteenth century Chandausi was a mere village, but it has now become an important trading centre, largely owing to the extension of railway communications. The town is traversed by broad well-made roads, and contains a municipal hall, a police station, a munsifi, and a branch of the American Methodist Mission. It has been a municipality since 1863. During the ten years ending 1901 the income and expenditure averaged Rs. 26,000. In 1903-4 the income was Rs. 33,000, chiefly from octroi (Rs. 27,000); and the expenditure was Rs. 34,000. Chandaust is an emporium for all sorts of country produce collected from the neighbourhood. Sugar is chiefly exported to the Punjab and Rajputana, while grain goes to the dearest market. Cotton is sent to Calcutta and Cawnpore. Salt from Raiputana and piece-goods are the chief imports. During the last few years a considerable trade has arisen in hemn (san). which is sent to Calcutta and Bombay. There were four cotton presses and gins, employing 161 hands in 1903, and one hemp A little cotton cloth is made for local use. middle school has 101 pupils, and the municipality manages two schools and aids four others attended by 276 pupils.

Hasanpur Town.—Head-quarters of the tahsilof the same name in Morādābād District, United Provinces, situated in 28° 44' N. and 78° 17' E., 33 miles west of Morādābād city. Population (1901), 9,579. The town derives its name from Hasan Khān, who founded it in 1634. It contains a dispensary and a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income

of about Rs. 2,000. Its trade is purely local; but a small quantity of very good cloth is made. The middle school has 125 pupils.

Kānth.—Town in the Amroha tahsīl of Morādābād District, United Provinces, situated in 29°3′ N. and 78°37′ E., 17 miles north-west of Morādābād city. Population (1901), 7,092. The town contains a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income of about Rs. 1,600. There is a small local industry in cotton cloth and sugar. The middle school has 146 pupils.

Moradabad City. - Head-quarters of the District and tahsil of the same name, United Provinces, situated in 28° 51' N. and 78° 46' E., on the Delhi-Bareilly road, and on the main line of the Oudh and Rohilkhand Railway, 868 miles by rail from Calcutta and 1,087 from Bombay. Population is rising steadily. The numbers at the four enumerations were as follows: (1872) 62,417, (1881) 69,352, (1891) 72,921, and (1901) 75,128. Hindus numbered 31,141 in 1901 and Musalmans 42,472. The city was founded by Rustam Khan, governor of Katehr under Shah Jahan, and named after the ill-fated Murad Bakhsh, the emperor's son. From this time Morādābād takes the place of Sambhal as the seat of the local governor. Early in the eighteenth century it was for a few years ruled by Nizām-ul-Mulk, who afterwards distinguished himself as Nizām of the Deccan. A later governor of Morādābād attempted to arrest the growing power of Ali Muhammad, leader of the Rohillas, but was defeated and slain; and by 1740 Morādābād was included in the new State of ROHIL-KHAND. Its subsequent history is that of the District, which has already been related. In 1774 the Rohilla possessions fell into the power of Oudh and in 1801 were ceded to the British. Four years later Amīr Khān, the Pindāri leader of part of Holkar's forces, dashed through Rohilkhand, but was foiled in his attempt to plunder the Government treasury by Mr. Leycester, the Collector, who shut himself up in the courthouse, defended by two small field-pieces.

The town is built on a ridge forming the right bank of the Rāmgangā, and drains naturally into that river. The Jāma Masjid, or chief mosque, which stands high on the river bank, is a handsome building, erected in 1631 by Rustam Khān. Close by are the ruius of the fort built by the same governor. The city contains a municipal hall, a talsīh, male and female dispensaries, and a mission church. Part of the barracks of the old cantonment, which is no longer a station for troops, is used

as a police training-school, where candidates for employment as sub-inspectors and newly appointed Assistant Superintendents pass a period of probation, the school being in charge of a selected District Superintendent assisted by an inspector. Appoorhouse and leper asylum were built near the railway station in 1881. Morādābād is the head-quarters of an Inspector and an Inspectress of schools, and is the central station of the American Methodist and Reformed Presbyterian Missions in the District.

The municipality was constituted in 1863. During the ten years ending 1901 the income averaged Rs. 66,000 and the expenditure Rs. 64,000. In 1903-4 the income was 1-1 lakls, chiefly derived from octroi (Rs. 81,000) and municipal property (Rs. 25,000). The expenditure was 1-2 lakls, including conservancy (Rs. 29,000), public safety (Rs. 22,000), and administration (Rs. 11,000).

The trade largely consists of sugar, wheat, and, in good years, rice, which are exported by rail. The recent extension of direct railway communication with Delhi, which has long been one of the important markets for the produce of Rohilkhand, has favoured commerce. The principal manufacture of the town is brassware, some of which is highly ornamental. Formerly brass articles were plated with tin and patterns were then engraved, so that the pattern showed the brass ground. In place of tin a coating of lac is now generally used, the lac being coloured black, blue, or red. Cotton is also woven, and some calico-printing is done; but both the brass and cotton industries are declining in prosperity. The municipality manages three schools and aids twelve others with 1,458 pupils. The District school has 274 boys, and the Arva Samal, the Muhammadan Association, and a private school educate about 450 more. A normal school for training teachers is also maintained here. There are twenty-three printing presses, about half of which issue newspapers, but none is important.

Sambhal Town.—Head-quarters of the talists of the same name in Morādāhād District, United Provinces, situated in 28° 35' N. and 78° 34' E., 23 miles south-west of Morādāhād city by a metalled road. Population (1901), 39,715. The town is believed by the Hindus to have existed in the three epochs (1991) preceding the present or Kali Yuga, at the end of which the tenth incarnation of Vishnu will appear in Sambhal. Many ancient mounds exist in the neighbourhood, but have not been explored. Tradition relates that Prithwi Rāj of Delhi finally defeated Jai Chand of Kananj close to Sambhal,

and an earlier battle is said to have taken place between the Rājā of Delhi and Saiyid Sālār. Kutb-ud-dîn Aibak reduced the neighbourhood for a time; but the turbulent Katehriyas repeatedly engaged the attention of the early Muhammadan kings, who posted a governor here. In 1346 the governor revolted, but was speedily crushed. Firoz Shāh III appointed an Afghan to Sambhal in 1380, with orders to invade Katehr every year and ravage the whole country till Khargū, the Hindu chief, who had murdered some Saiyids, was given up. In the fifteenth century Sambhal was the subject of contest between the sovereigns of Delhi and the kings of Jaunpur, and on the fall of the latter Sikandar Lodi held his court here for some years. Bābar appointed his son, Humāyūn, to be governor of the place, and is said to have visited it himself. Under Akbar Sambhal was the head-quarters of a sarkar, but in the reign of Shah Jahan its importance began to wane and Morādābād took its place. In the eighteenth century Sambhal was chiefly celebrated as the birthplace of the Pindari, Amīr Khān, who raided Rohilkhand in 1805 and afterwards founded the State of TONK.

The town site is scattered over a considerable area, and contains a mound marking the ruins of the old fort. No building stands on this except a mosque, claimed by the Hindus as a Vaishnava temple, but in reality a specimen of early Pathan architecture in which Hindu materials were probably used. The mosque contains an inscription recording that it was raised by Babar; but doubts have been cast on the authenticity of this. There are many Hindu temples and sacred spots in the neighbourhood. The town contains a tahsili, a munsifi, a dispensary, and a branch of the American Methodist Mission. It has been a municipality since 1871. During the ten years ending 1001 the income and expenditure averaged Rs. 21,000. The income in 1903-4 was Rs. 30,000, chiefly from octroi (Rs. 23,000); and the expenditure was Rs. 20,000. Refined sugar is the chief article of manufacture and of trade, but other places nearer the railway have drawn away part of its former commerce. Wheat and other grain and ghi are also exported, and there is some Combs of buffalo horn are manufactured. trade in hides. The talistic school has 142 pupils, and the municipality manages two schools and aids seven others with 349 pupils.

Sirsi.—Town in the Sambhal talisil of Moradabad District, United Provinces, situated in 28° 38' N. and 78° 39' E., 16 miles south-west of Moradabad city. Population (1901), 5,894. It is administered under Act XX of 1856, with an income of

about Rs. 1,700. There is a small industry of cotton-weaving. The primary school has 105 pupils.

Solah Sarai ('sixteen inns').-The suburbs of the town of Sambhal, in Morādābād District, United Provinces, are not included in the municipality of that name, but are administered separately under Act XX of 1856. They form a scattered area, with a population (1901) of 10,623; and a sum of about Rs. 1,000 is raised annually and expended on watch and ward and on conservancy.

Thakurdwara Town.—Head-quarters of the tabsil of the same name, in Moradabad District, United Provinces, situated in 29° 12' N. and 78° 52' E., 27 miles north of Moradabad city. Population (1901), 6,111. The town was founded in the reign of Muhammad Shah (1719-48), and was plundered by the Pindari, Amir Khan, in 1805. It contains a taketh, a police station, a dispensary, and a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income of about Rs. 1.300. The tahsili school has 83 pupils.

Bounfiguration, and river system.

Shahjahanpur District.—Southern District of the darles, con- Bareilly Division. United Provinces, lying between 27° 35' and 28° 29' N. and 70° 20' and 80° 23' E., with an area of 1,727 square miles. It is bounded on the north by Bareilly and Pilibhit; on the east by Kheri; on the south by Hardoi and Farrukhābād; and on the west by Budaun, The District consists of a narrow alluvial tract, running north-east from the river Ganges towards the Himalayas. It is crossed nearly at right angles by the river system of South Rohilkhand, and its natural features thus depend almost entirely upon the various streams which have cut deep channels through the alluvial soil of the Gangetic basin. The principal rivers are the Rim-GANGA, the Deohn or Carra, and the Gumti. Near the Ganges is a stretch of wild khādar, from which an area of stiff clay, drained by the Sot or Yar-i-Wafadar, reaches to the Ramganga. The channel of the latter river shifts from side to side of a broad valley to an extraordinary extent. Between the Ramganga and the Garra lies an extensive tract of sandy soil, which changes east of the Gami to clay and then to a fertile loam extending north-east of the Garra. The loam tract is crossed by the Khanaut, a tributary of the Garra, beyond which another sandy area is found, gradually changing to a forest tract on the border of the damp sub-Himalayan Districts.

Geology.

Shāhjahānpur is situated entirely in the Gangetic alluvium, and kankar or nodular limestone is the only stone found in it.

The District is fairly well wooded, and contains nearly 50 Botany. square miles of groves. Mango, bamboo, babul (Acacia arabica), shisham (Dalbergia Sissoo), tun (Cedrela Toona), and, in the north, sal (Shorea robusta), are the chief timber trees.

Leopards are sometimes seen in the jungles in the north Fauna. of the District, and the tiger and lynx have been shot there, but not recently. Spotted deer frequent the same tract, and nilgai and wild hog are common everywhere, especially near the rivers. Antelope are found near the Gumti and Ganges. Hares, partridges, quail, sand-grouse, and peafowl are included in the smaller game, while the large ponds and marshes abound in the cold season with geese, duck, and teal.

The climate is moister than in the Doab, though drier than Climate in the more northern Districts of Rohilkhand. The central and temportion is healthy; but in the north bad fever and ague are prevalent, and in the south the neighbourhood of the Sot is also unhealthy.

The annual rainfail averages about 37 inches, varying from Rainfail. 33 in the south-west of the District to 40 inches at Shāh-jahānpur city. In 1895-6 the fall was only 23 inches, and in 1893-4 as much as 57 inches.

In ancient times this District must have been included in History. the kingdom of Panchāla, and during the early Muhammadan period it formed part of the tract known as Katehr. Shāhjahān-pur city was founded in the reign of Shāh Jahān by Nawāb Bahādur Khān, who named it in honour of the emperor. Early in the eighteenth century part of the south of the District was included in the territory of Muhammad Khān, Nawāb of Farrukhābād, but the central portions were acquired by Alī Muhammad, the Rohilla chief. On the cast the Katehriyās retained their independence, and the land held by them formed a debatable ground between Oudh and Rohilkhand. In 1774, after the defeat of the Rohillas by the allied forces of Oudh and the British, the two Provinces became united; and in 1801 this District, with other territory, was ceded to the British.

Thenceforward order was never seriously disturbed until the Mutiny, although the District bordered upon the most turbulent part of Oudh. In 1857, however, Shāhjahānpur became the scene of open rebellion. The news of the Meerut outbreak arrived on May 15; but all remained quiet till the 25th, when the sepoys informed their officers that the mob intended to plunder the treasury. Precautions were taken against such an attempt; but on the 31st, while most of the officers, civil

and military, were at church, some of the sepoys forced their way into the building and attacked them. Three Europeans were shot down at once; the remainder were joined by the other officers, and the whole party escaped first to Pawayan. and afterwards to Muhamdt in Kherl District. The mutineers burnt the station, plundered the treasury, and made their way to the centre of local disaffection at Bareilly. A rebel government under Kädir Alī Khān was proclaimed on June 1. On the 18th Ghulam Kadir Khan, the hereditary Nawab of Shāhjahānpur, passed through on his way to Bareilly, where he was appointed Nazim of Shahjahanpur by Khan Bahadur On the 23rd the Nawah returned to his titular post, and superseded Kādir Alt. He remained in power from June, 1857, till January, 1858, when British troops reoccupied Fatehgarh. The Nawab of Fatehgarh and Firoz Shah then hastened to Shahiahanpur and on to Barelly. After the fall of Lucknow, the Năna Săhib also fled through Shāhjahānpur to Bareilly. In Jamusry the Nawab put to death Hamid Hasan Khan, Deputy-Collector, and Muhammad Hasan, Subordinate Judge, for corresponding with the British. April 30, 1858, the British force, under Lord Clyde, reached Shāhiahānpur. The rebels fled to Muhamdi and Lord Clyde went on to Bareilly on May 2, leaving only a small detachment to guard the station. The rebels then assembled once more, and besieged the detachment for nine days; but Brigadier Jones's column relieved them on the 12th, and authority was then finally re-established.

Archaeology. The District contains a few ancient sites which have not been explored, Golā and Mātī in the Pawāyān taksī being the largest. A copperplate grant by Harsha of Kanauj, dated A.D. 628, was found at Bānskhera. There are no Muhammadan buildings of importance.

The people.

The District contains 6 towns and 2,034 villages. The population has fluctuated during the last thirty years. The numbers at the four enumerations were as follows: (1872) 951,006, (1881) 856,946, (1891) 918,551, and (1901) 921,535. Between 1872 and 1881 the District suffered severely in the famine of 1877-8 and the fever epidemic of 1879. There are four taksils—Shāhjahānpur, Jahāhābād, Tilhar, and Pawāyān—each of which is named after its head-quarters. The principal towns are the municipalities of Shāhjahānpur City, the District head-quarters, and Tilhar. The table on the next page gives the chief statistics of population in 1901.

1 Epicraphia Indica, vol. iv, p. 208.

District total	1,727	6	2,034	921,535	534	+ 0-3	23,12

About 85 per cent. of the total are Hindus and more than 14 per cent. Musalmāns. The Arya Samāj, though its members number only 1,646, is increasing in importance. More than 99 per cent. of the people speak Western Hindi, the prevailing dialect being Kanaujiā.

Chamārs (leather-dressers and cultivators), 98,000, are the Castes and most numerous Hindu caste. The other large castes are Kisāns occupations. (cultivators), 79,000; Ahīrs (graziers and cultivators), 71,000; Rājputs, 68,000; Brāhmans, 61,000; Kahārs (fishermen and cultivators), 40,000; Kāchhīs (cultivators), 34,000; Muraos (market-gardeners), 31,000; and Kurmīs (agriculturists), 27,000. Among Musalmāns, Pathāns number 41,000, followed by Shaikhs, 24,000, and Julāhās (weavers), 18,000. The proportion of the population supported by agriculture is 69 per cent.—ton of the population supported by agriculture is 69 per cent. Bajputs and labour 4 per cent., and cotton-weaving 2 per cent. Rājputs and Brāhmans are the chief holders of land; and Rājputs, Kāchhīs, Muraos, Ahīrs, and Chamārs are the principal cultivators.

Out of 1,739 native Christians in 1901, 1,495 were Metho-Christian dists. The American Methodist Mission opened work in the missions. District in 1859, and has seven stations, besides two in Oudh.

Agricultural conditions are exceedingly complex, owing to General agricultural character of the soil and of the facilities for irrigation. Agricultural control of the Ganges khādar is either sand or light loam, and suffers ditions. The Ganges khādar is either sand or light loam, and suffers ditions. The from drought, though it is also liable to disastrous floods. The clay tract adjoining it produces rice in the autumn, and requires constant irrigation for wheat and poppy, the principal spring crops. This is the only part of the District where sugar-cane is not grown. Along the Rāmgangā irrigation is easy, but the autumn crops are liable to great damage from flooding. East of this river the sandy tract produces bājra and wheat of medium quality. Another clay tract is found between the Garai and the Garai, which is liable to suffer in dry years.

The most fertile tract is the loam area in the centre of the District, which produces much sugar-cane and other valuable crops. North-east of this the soil deteriorates and becomes sandy; there is a good deal of jungle, and wild animals damage the crops, while the drinking-water is bad in places, better land is found in the extreme north-east, but its value depends largely on its distance from the forests on the border. and on its immunity from wild beasts.

Chief agricultural statistics

The ordinary tenures of the United Provinces are found. Zamindūri mahāls include 56 per cent, of the total area, and and princi- fattidari mahals 44 per cent. The main agricultural statistics for 1903-4 are shown below, in square miles:-

Taksil,		Taksil. Total Cultivated.		Cultivated.	Terigated	Cultivable Wiste	
Shāhjahānyur	•	⊽	394	293	84	44	
Jalūlābād .	•		334	295	65	50	
Tilhar .	4	•	418	330	84	26	
Pauäyān .	•	• ]	591	300	714	146	
	Tot	tai	1,727	1,207	347	100	

The chief food-crops, with the area under each in square miles in 1003-4, are: wheat (444), rice (106), gram (150), and hājra (173). Sugar-cane covered 56 square miles, and poppy 27. Of the uncultivated area, about 52 miles are occupied by the forests in the north-cast of the District, and an equal amount by swamps and sandy tracts near the Guntt.

Improvements in agricul. tural practice.

There have been no improvements in the means of irrigation, and no expansion of cultivation in recent years. On the other hand, a use is noticeable in the area bearing a double crop, and the valuable crops are being more largely sown. Thus rice has taken the place of bajra and jowar, and the area under poppy and sugar-cane has increased. Considerable advances were made under the Agriculturists' Loans Act during the ten years ending 1900, amounting to 1.6 lakhs, but a quarter of this was lent in the famine year 1896-7. Only small sums have been advanced in later years, and the loans granted under the Land Improvement Act have been insignificant, except in 1896-7.

Cattle. horses, sheep, and goats.

In the north of the District the bangar breed of cattle is found, the bullocks being hardy and quick-moving. In 1866 and 1867 attempts were made to introduce a better strain near Shahjahanpur; but the climate did not suit the animals imported. The ordinary breed of horses is also poor; stallions have been kept by Government for some years, and two are now at stud. The sheep and goats are small and inferior.

In 1903-4, out of 347 square miles irrigated, wells supplied Irrigation. 207 square miles, tanks or jhils 86, and other sources 54. The spring-level is high, and in ordinary years irrigation is not required for many crops, or can be supplied easily by temporary wells lasting for a single harvest. In two tracts a deficiency of water is experienced in dry years. The sandy area along the Gumti is unprotected, while the clay tract in the south of the District depends on the numerous small channels which intersect it, and which are dammed at the end of the rains, to supply water for the spring harvest.

There are no 'reserved' or 'protected' forests the property Forests. of Government; but in the north-east of the District are some tracts of unreclaimed forest, chiefly säl, which, with a sew exceptions, do not now contain any large timber, but supply poles for use in house-building. Their total area is about 52 square miles.

Kankar or nodular limestone is the only mineral product, Minerals. and is used for metalling roads and for burning into lime.

Sugar-refining is by far the most important industry in the Arts and District. Indigo was once manufactured, but has now become manufactures. a minor product. The matting made from a jungle grass called baib is largely exported. Coarse cotton cloth, chintz, and brass vessels are made in various places for local use, and there are small manufactures of ironware inlaid with gold and silver, and of lacquered goods. The Rosa sugar and rum factory near Shāhjahānpur is one of the largest in India, and employed 632 hands in 1903.

The grain trade is of ordinary dimensions, and sugar is the Commerce. principal article of export, the Shāhjahānpur production being celebrated throughout India. It is largely exported to Rājputāna and the Punjab. There is also a considerable trade in oilseeds at Tilhar. European goods, metals, and salt are the principal imports. Forest produce is floated down the rivers from Pīlībhīt; but the spread of railways has largely decreased the river traffic, which was formerly important. Tilhar and Shāhjahānpur are the chief trade centres, though markets are held at many smaller places.

The Oudh and Rohilkhand main line crosses the centre of Railways the District and is the chief trade route; but a little traffic is and roads, carried by the Lucknow-Sītāpur-Bareilly State Railway, which traverses the north-east corner. The two lines are connected by a steam tramway or light railway, 40 miles long, from Shāh-jahānpur city to Mailānī in Kherī District. The District is well supplied with roads, except in the tract south-west of the Ram-

gangā. Of these 118 miles are metalled, and are maintained by the Public Works department, but the cost of 46 miles is charged to Local funds. The remaining 326 miles are unmetalled. Avenues of trees are maintained on 222 miles. The principal routes comprise the branch of the grand trunk road from Fatehgarh which divides at Jalālābād, one line going to Bareilly and one to Shāhjahānpur city; the road from Bareilly through 'Tilhar and Shāhjahānpur to Sītāpur and Lucknow; and the road from Shāhjahānpur through the north of the District.

Famine.

In a large part of the District the effects of drought can be mitigated as long as the cultivators are able to make temporary wells: but elsewhere a failure of the rains is disastrous, and Shāhjahānpur has suffered severely. The great famine of 1783-4 did not press so heavily here as in the tracts south of the Ganges. In 1803-4, two years after cession, rain completely failed for the autumn harvest. In 1825-6 drought again occurred, but hardly caused famine. The autumn rains failed in 1827-8, but a slight full in February saved the spring harvests. The famine of 1860-1 was severely felt throughout Robilkhand. though Shahjahanpur escaped more lightly than the contiguous District of Budaun. In 1868-9 the period of pressure was severe, but only lasted for seven weeks. The famine of 1877-8 was the worst since the commencement of British rule. A series of bad harvests had followed the previous scarcity of 1868-9, and prices had risen owing to the domand for grain in Southern India. On August 17, 1877, the Collector reported 'roaring hot winds, and not a vestige of green anywhere.' 'The autumn harvest, which provides the chief food-grains for the lower classes, was a complete failure. Rain early in October enabled the sowings for the rabi or spring crop to be made, and advances were given for seed. Relief works were opened in December; but the people refused to come on them, and large numbers succumbed in the cold season. The after-effects of the famine were severely felt when an epidemic of fever broke out in 1879. The registered death-rate rose from 29-37 per 1,000 in 1877 to 57.04 in 1878, and stood at 53.59 in 1879. In 1805 the rains ceased prematurely, and distress was felt in the north of the District by May, 1896. The monsoon of 1896 closed even earlier than in 1895, and the sugar-cane and rice were seriously damaged, besides the ordinary food-crops. Great use was made of river water, so that a fair spring harvest was secured, and the relief works opened were not resorted to by any large number.

The Collector is usually assisted by a member of the Indian District Civil Service, and by four Deputy-Collectors recruited in India. ttaff. A talisildär is stationed at the head-quarters of each takisil. Two officers of the Opium department are posted to this District.

There are three regular District Munsifs, and a scheme for Civil jusvillage Munsifs was introduced in 1894. The District Judge tice and and Sub-Judge exercise civil jurisdiction over the neighbouring District of Budaun; but the former hears sessions cases from Shāhjahānpur alone. Crime is heavy, the more serious forms of offences against life and limb, and robbery and dacoity, being common. Female infanticide was formerly suspected; but in 1904 only 154 persons remained under surveillance.

At cession in 1801 the present area formed part of Bareilly; Land but a separate District of Shāhjahānpur was constituted in revenue 1813-4. Early settlements were for short periods, being based tration. as usual on the previous collections coupled with a system of competition. The first regular settlement under Regulation IX of 1833 was carried out in 1838-9. The District had been over-assessed, and considerable reductions, amounting to about 12 per cent., were made, the demand being fixed at 9.8 lokhs. Villages were grouped according to their capabilities of soil and irrigation, and revenue rates fixed per acre of cultivation. Another revision took place thirty years later, and the new settlement was based on rates selected from the rents actually paid, with some regard to prospective increases. The result was an assessment of 11.8 lakhs, which was subsequently reduced by Rs. 18,000. The latest revision was made between 1806 and 1900. In this settlement prospective increases in the rental value of villages were altogether disregarded, except where the rents were found to be totally inadequate. About four-fifths of the area assessed was held by tenants, cash rents being paid in the greater part. The assessment amounted to 11.7 lakhs. or 48.6 per cent of the accepted 'assets,' and the operations chiefly resulted in a redistribution of the demand. The incidence per acre is Rs. 1-2, varying from R. 0-5 in the north of the District to Rs. 1.7 in the fertile central tract.

The total collections on account of land revenue, and revenue from all sources, have been, in thousands of rupces:—

	1880~3.	1890-1.	t900-1.	1903-4.
Land revenue	11,20	11,09	13,91	10,53
	16,87	19,92	25,80	10,02

Local selfgovernment.

There are two municipalities, Shānjahānpur and Tilhar, and four towns are administered under Act XX of 1856. Beyond the limits of these places local affairs are managed by the District board, which has an income and expenditure of more than a lakh. In 1903-4 the expenditure on roads and buildings amounted to Rs. 46,000.

Police and juits.

The District Superintendent of police commands a force of 3 inspectors, 89 subordinate officers, and 365 constables, besides 302 municipal and town police, and 2,097 rural and road police. There are 19 police stations. The District jail contained a daily average of 316 prisoners in 1903.

Education.

The population of Shāhjahānpur is not conspicuous for literacy, and in 1901 only 2.6 per cent. (4 males and 0.3 females) could read and write. The number of public schools, however, increased from 149 in 1880-1 to 184 in 1900-7, and the number of pupils from 4,324 to 8,796. In 1903-4 there were 186 public schools with 8,744 pupils, of whom 514 were girls, and 60 private schools with 667 pupils. Four of the public schools are managed by Government and 124 by the District and municipal boards. Out of a total expenditure on education of Rs. 52,000, Local funds provided Rs. 41,000 and fees Rs. 10,000.

Hospitals and dispensaries. The District possesses 11 hospitals and dispensaries, with accommodation for 130 in-patients. About \$5,000 cases were treated in 1903, of whom 1,400 were in-patients, and 3,000 operations were performed. The total expenditure was 16,000, chiefly met from Local funds.

Vaccina-

In 1903-4, 30,000 persons were vaccinated, representing a proportion of 32 per 1,000 of population. Vaccination is compulsory only in the two municipalities.

[District Gazetteer (1883, under revision); W. A. W. Last, Settlement Report (1901).]

Shāhjahānpur Tahsīl.—Head-quarters tahsīl of Shāh-jahānpur District, United Provinces, comprising the parganas of Shāhjahānpur, Jamaur, and Kānt, and lying between 27° 39' and 28° 1' N. and 79° 36' and 80° 5' E., with an area of 394 square miles. Population fell from 273.146 in 1891 to 265,467 in 1901. There are 463 villages and only one town, Shāhlahānpur City (population, 76,458), the District and tahsīl head-quarters. The demand for land revenue in 1903-4 was Rs. 3,00,000, and for cesses Rs. 49,000. The density of population, 674 persons per square mile, is considerably above the District average, owing to the inclusion of the city. Through the centre of the taksīl flows the Garrā, with a narrow belt of

rich alluvial soil on either bank, while several smaller streams act as drainage channels. The eastern portion has a good loam soil; but the centre is clay, and the western tract is sandy and liable to periods of depression. In 1903-4 the area under cultivation was 293 square miles, of which 84 were irrigated, mostly from wells.

Jalālābād Tahsil.—South-western tahsil of Shāhjahānpur District, United Provinces, conterminous with the pargana of the same name, lying between 27° 35' and 27° 53' N. and 79° 20' and 70° 44' E., with an area of 324 square miles. Population increased from 158,798 in 1891 to 175,674 in 1901, the rate of increase being the highest in the District. There are 360 villages and one town, JALALABAD (population, 7,017), the tahsīl bead-quarters. The demand for land revenue in 1003-4 was Rs. 2,17,000, and for cesses Rs. 35,000. The density of population, 542 persons per square mile, is about the District average. Along the south western border flows the Ganges. and the Ramganga crosses the centre of the tahsil. The Ganges khādar is very poor. Beyond the khādar a hard clay plain, called bankafi, extends up to the Ramganga alluvial tract. The bankali area requires constant irrigation, which is supplied by damming numerous small streams. Near the Rāmgangā the soil is usually richer, but deposits of sand are occasionally left by the river floods. East of the Ramganga lies a small tract of light sandy soil, requiring irrigation. In 1903-4 the area under cultivation was 225 square miles, of which 65 were irrigated. Rivers supply more than half the irrigated area.

Tilhar Tahsil,-North-western tahsil of Shahjahanpur District, United Provinces, comprising the parganas of Tilhar, Mīrānpur Katra, Nigohī, Khera Bajhera, and Jalālpur, and lying between 27° 51' and 28° 15' N. and 79° 27' and 79° 56' E., with an area of 418 square miles. Population increased from 237,385 in 1891 to 257,035 in 1901. There are 558 villages and three towns: TILHAR (population, 19,091), the taksil head-quarters, Khudaganj (6,356), and Katra (6,200). demand for land revenue in 1903-4 was Rs. 3,46,000, and for cesses Rs. 56,000. The density of population, 615 persons per square mile, is considerably above the District average. This is the most prosperous taksil in Shahjahanpur. The Ramganga flows on or near the western border, fringed by a tract of rich alluvial soil. This is succeeded by a stretch of clay near the Bahgul river, east of which lies a sandy area. The central and eastern portions consist of a rich fertile loam, crossed by the Garra. In 1903-4 the area under cultivation was 330 square miles, of which 84 were irrigated. Wells supply two-thirds of the irrigated area, but the Bahgul river is also used for irrigation.

Pawäyān Tahsīl.-North-eastern tahsil of Shālijaliannur District, United Provinces, comprising the parganas of Pawayan, Baragaon, and Khutar, and lying between 27° 55 and 28° 29' N. and 79° 53' and 80° 23' E., with an area of 591 square miles. Population fell from 249,222 in 1891 to 223,359 in 1901, the decrease being the largest in the District. There are 653 villages and one town, PAWAYAN (population, 5,408), the labsit. The demand for land revenue in 1903-4 was Rs. 2,90,000, and for cesses Rs. 46,000. The density of population, 378 persons per square mile, is the lowest in the In the north lies an area of about 52 miles of \_ The Gumti, which is here a small stream, crosses the centre of the talisti, and on either bank lies an arid stretch of sandy soil with malarious swamps in the low-lying places. The western portion is more fertile, and there is some good land between the forest and the central tract. In 1903-4 the areaunder cultivation was 360 square miles, of which 114 were irrigated. Wells supply three-quarters of the irrigated area, and swamps or jhils most of the remainder.

Jalālābād Town.—Head-quarters of the talist of the same name in Shāhjahānpur District, United Provinces, situated in 27° 43' N. and 79° 40' E., at the junction of the roads from Bareilly and Shāhjahānpur to Farrukhābād. Population (1901), 7,017. Jalālābād is an old Pathān town, said to have been founded by Jalāl-ud-dīn Fīroz Shāh. Its importance has decreased owing to its distance from the railway. The houses are chiefly built of mud, and none of the mosques and temples is of special interest. The Government offices stand on the site of an old fort, and the town also contains a dispensary and a branch of the American Methodist Mission. It is administered under Act XX of 1856, with an income of about Rs. 2,500. Trade is only local. The talisīti schuol has about 211 pupils.

Katra (or Mirānpur Katra).—Town in the Tilhar tahsil of Shāhjahānpur District, United Provinces, situated in 28° 2' N. and 79° 40' E., on the Oudh and Rohilkhand Railway. Population (1901), 6,209. The town generally is built of mud, and contains a police station, a dispensary, and a branch of the American Methodist Mission. Between this place and Fatchganj East in Bareilly District was fought the battle in which the united British and Oudh forces defeated the Rohillas under Rahmat Khān, and effected the annexation of Rohilkhand to

Oddh. Katra is administered under Act XX of 1856, with an income of about Rs. 1,500. There is a considerable export of local produce by railway. The middle school has 128 pupils.

Khudāganj.—Town in the Tilhar talisīl of Shāhjahānpur District, United Provinces, situated in 28° 8' N. and 79° 44' E., 24 miles north-west of Shāhjahānpur city. Population (1901), 6,356. The place is said to have been founded as a market in the middle of the eighteenth century, and under British rule was the head-quarters of a talisīl as late as 1850. It is administered under Act XX of 1856, with an income of about Rs. 2,000. Khudāganj is a thriving place, with a considerable trade in agricultural products. The middle school has 95 pupils.

Pawāyān Town.—Head-quarters of the tahsil of the same name in Shāhjahānpur District, United Provinces, situated in 28° 4' N. and So° 5' E., on the steam tramway from Shāhjahānpur city to Mailāni in Kherī District. Population (1901), 5,408. Pawāyān was founded early in the eighteenth century by a Rājā whose descendants still own a large estate in the neighbourhood. It contains a tahsili, a munsifi, a dispensary, and a branch of the American Methodist Mission. Pawāyān is administered under Act XX of 1856, with an income of about Rs. 1,800. The bazar is poor and straggling, but there is some trade in sugar and brass vessels. The tahsili school has 158 pupils.

Shāhjahānpur City. — Administrative head-quarters of Shāhjahānpur District and taksīl, with cantonment, United Provinces, situated in 27° 53′ N. and 79° 54′ E., on the left bank of the river Deohā or Garrā, crowning the high ground just above its junction with the Khanaut, with a station on the Oudh and Rohilkhand Railway, 768 miles by rail from Calcutta and 987 from Bombay. Population has fluctuated. The numbers at the four enumerations were as follows: (1872) 72,136, (1881) 77,404, (1891) 78,522, and (1901) 76,458, of whom 73,544 resided in the municipality and 2,914 in cantonments. Hindus numbered 35,636 in 1901 and Muhammadans 40,017.

The date usually assigned to the foundation of the city is 1647, after the defeat of the Rājputs in this neighbourhood by Diler Khān and Bahādur Khān, and a mosque was built here by the latter in that year. The city has no history apart from that of the District, which has already been related. There are few buildings of any interest. The old fort was completely destroyed after the Mutiny; and the mosque referred to above and a few tombs, including that of Bahādur Khān, one of the

founders of the city, are the only memorials of the former rulers. The principal public buildings, besides the ordinary District offices, are the municipal hall, District school, and the male and female dispensaries. The American Methodist Mission has its head-quarters here, and possesses several churches and an ornhanage. A new meeting-house has recently been built by the Arya Samaj. Shahjahanpur is the head-quarters of an officer of the Opium department. The municipality was constituted in 1864. During the ten years ending 1991 the income and expenditure averaged Rs. 74,000 and Rs. 72,000 respectively. In 1903-4 the income was 1-4 lakhs, including neuroi (Rs. 58,000), rents of municipal markets (Rs. 27,000), and sale of refuse (Rs. 23,000). The municipality also has Rs. 30,000 The expenditure amounted to 1.3 lakhs, including conservancy (Rs. 39,000), made and buildings (Rs. 13,000). public safety (Rs. 24,000), and administration (Rs. 15,000). Shahjahanpur is remarkable for the excellence of its drainage and general socitation. British troops form the usual garrison of the cantonment, and in 1901-2 Boer prisoners were encamped here. The income and expenditure of the cantonment fund in 1903-4 were Rs. 15,000 and Rs. 18,000. The trade of Shahjahanpur is small compared with its population. Sugar is the chief article of manufacture and commerce. The Rosa (Rausar) factory, which lies two miles south of the city, is the only establishment managed by Europeans. It deals with about 10 or 12 per cent, of the sugar produced in the District. and employed 632 hands in 1903. Raw sugar was formerly purchased for refining, but cane-orushing machinery has recently been crected, to supplement the supply. Rum is also mannfactured and exported to many parts of India. The District high school has x88 pupils, and the tahstlt school 214, while the municipality maintains four schools and aids seventeen others, with 1,452 pupils.

Tilhar Town.—Head quarters of the tahsal of the same name in Shāhjahānpur District, United Provinces, situated in 27° 58' N. and 70° 44' E., on the Oudh and Rohilkhand Railway, and on the road from Shāhjahānpur city to Bareilly. Population (1901), 19,091. The town is said to have been founded in the time of Akbar, but has little history. During the Mutiny the principal Muhammadan residents joined the rebels, and their estates were confiscated. Tilhar was then a small and unimportant place; but the opening of the railway has stimulated its trade, and it is now the second town in the District, with several commodious markets belonging to thg

sal, which gives place to the ordinary trees of the plains in the south and west.

Fauna.

In the wilder parts of Püranpur tigers and leopards are numerous, but elsewhere scatce. Wild hog and deer of various kinds are found in many parts, and do much damage to the crops. The Jackal and wolf are also common. Black and grey partridge, quail, sand-grouse, jungle-fowl, peafowl, geese, ducks, and snipe are the commonest game-birds. The mahseer is found in the Särdä, and fish are common everywhere.

Climate and temperature. Fever is endemic throughout the District, and is especially virulent in the swamps near the forests in Püranpur. Except for fever, Pilibhit is fairly healthy, and its proximity to the hills causes a more even temperature and cool climate than in the Districts farther south.

Rainfail.

The same cause ensures a copious rainfall, the annual amount averaging more than 49 inches. The two northern takuls receive 52 inches and Bisalpur in the south about 44. Damage is occasionally caused both by excess and by deficiency of rain.

History.

At the end of the tenth century a line of princes of the Chhinda family ruled in the north of the District; nothing is known of them but their names, recorded in an inscription found near Dewal, and the fact that they made a canal. Local history commences with the rise of the Robilla power in the eighteenth century, when Pilibhit fell into the hands of Illifiz Rahmat Khan, the great leader of the Robillas after the death of All Muhammad. He resided for a time at Pilibhit, which is indebted to him for its mosque and walls, some of its markets, and all that distinguished it before the advent of British rule. Rahmat Khān was killed in the battle near KATRA in 1774, fought between the Robillas and the Nawab of Oudh, who was aided by a British force lent by Warren Hastings. Phibhit was occupied without resistance, and became part of the new dominions added to Oudh. with the rest of Rohilkhand, it passed to the British, being ceded in lieu of the payment of tribute.

At the time of the Mutiny, in 1857, part of the present District was included in a subdivision of Bareilly. News of the rising of the troops at Bareilly reached Pilibhit on June 1, and tumults at once broke out among the population. The Joint Magistrate was forced to retire to Naint Tal; and while the surrounding villages remained a prey to the rapacity and extortions of rival camindars, the city nominally submitted

to the anthority of Khan Bahadur Khan, the rebel Nawab of Bareilly, a grandson of Hasiz Rahmar Khan. Order was restored in 1858, and has since then only been seriously disturbed in 1871, when a riot, which was not suppressed without bloodshed, occurred between Hindus and Muhammadans on the occasion of a Hindu festival.

Besides the ruins near Dewal several extensive mounds are Archaeosituated in various parts of the District, which have not been logyexplored. Local tradition connects them with the mythical Rājā Vena.

There are five towns and 1,056 villages. Population has The fluctuated considerably, owing to the unhealthy nature of People. a great part of the District, and the facility with which its inhabitants migrate. The numbers at the four enumerations were as follows: (1872) 492,098, (1881) 451,601, (1891) 485,108, and (1901) 470,339. The famine of 1877-8 and the fever epidemic of 1879 had serious effects on population. There are 3 falistic—Bisalpur, Pilinair, and Püranpur—each named from its head-quarters. The principal towns are the municipalities of Pilinair and Bisalpur. The following table gives the chief statistics of population in 1901:—

	a.re	Nu	વ્યક્તિક હા	ĝ	ž,	2 4 5 L	इंद्रेड

Püranpur	513	• •	142	89,084	174	- 6.4	1,447
District total	1,350	ā	1,050	470,339	348	- 3·0	10,773

Hindus form 82 per cent. of the total and Musalmans more than 17 per cent. The density is below the Provincial average, owing to the large area of forest and waste in Paranpur. Almost the entire population speak Western Hindi, Kanaujiā being the prevailing dialect.

Among Hindus the most numerous castes are: Kisārs Cartes and (cultivators), 54,000; Kurmīs (agriculturists), 47,000; Lodius occupations, 35,000; Chamārs (leather-workers and labourers), 31,000; Brāhmans, 25,000; and Muraus (market-gardeners), 25,000. The chief Muhammadan tribes and castes are: Julāhās (weavers), 15,000; Pathāns, 13,000; Shaikhs, 12,000; Behmās (cotton-carders), 6,000; Banjārās (gmin-carriers and agricultur-

ists), 5,000; and Rains (cultivators), 5,000. The Kisans and Lodhas are found chiefly in the Bareilly and Agra Divisions, the Kurmis in the centre of the Province, and the Banjaras in the submontane tracts. About 69 per cent, of the population are supported by agriculture—a high proportion; finer cent: by general labour, and a per cent, by weaving,

Christian missions.

Out of 1.283 native Christians in 1901, 1,138 were Metho-The American Methodist Mission has worked in this District since 1861.

General ngricultural conditions.

In the north-western talist of Pflibhit, with its clay soil and heavy rainfall, rice forms the most important crop; wheat and gram are also grown, and the cultivation of sugar-cane has extended considerably. Purmpur produces rice and wheat, but barley and oilseeds are grown to a larger extent than in Pilibhit, as the soil is lighter. In the south of the District rice is also an important crop, but sugar-cane is more valuable, and wheat and gram cover a larger area than in the north-west. The standard of cultivation varies considerably. In the south and west it will hear comparison with the best of the Rohilkhand Districts; but in the north-east and east, where the energies of the cultivator are devoted to protecting lux crops from the depredations of wild beasts, tillage is slovenly and irrigation rare.

Chiefagricultural statistics

The ordinary tenures of the United Provinces are found; but the District is remarkable for the extent to which and princi-zamindari mahals have remained undivided, especially in the two northern lahsils. Out of 1,493 mahals in these only 30 are pattidari, while in the Bisalpur tahsil 617 mahals are pattidari and 371 camindari. The main agricultural statistics for 1903-4 are given below, in square miles ;-

Tahsii.				Total.	Cultivated	Irrigated	Cultivable
Bisalpur Pilibhit Püranpur	•	•	•	363 474 573	1128 340 341	84 37 18	66 59 230
		To	tn1	1,250	659	139	255

Rice covered 136 square miles, or 28 per cent, of the net cultivated area, and wheat 194 square miles, or 29 per cent. : gram, barley, and bajra are the next niest important food-crops. Sugar-cane was grown on 58, and oilseeds on 23 square miles. Hemp (san), though it covered only 11 square miles. is increasing in importance.

. There has been no permanent increase in cultivation during Improverecent years, and fluctuations are considerable, owing to climatic ments in A rise is, however, noticeable in the area sown with tural the more valuable crops, rice and sugar-cane. Wheat sown practice. alone has been replaced by barley or by mixed crops, and there has been an increase in the area double cropped. Except in adverse seasons loans from Government are rarely taken. No advances were made from 1890 to 1894; and though Rs. 97,000 was lent during the next ten years, Rs. 53,000 of this amount was advanced in 1896-7.

The District contains large stretches of grazing-ground, Caula especially in the Purampur tahsil, and a special breed of eattle horses. is found here. It is called paurear, and the bullocks are of goals. average size, quick movers, and fiery tempered. Some Hansi bulls were once imported, but were not a success. Very few ponies or horses are kept, and the sheep and goats are generally inferior.

There is great divergence between the different talistic in the Impation. methods of irrigation, and the need and facilities for supplying water. In 1803-4 wells supplied 64 square miles, lakes and swamps 37, rivers 10, and Government canals 19 square miles The capals, which are situated entirely in the western part of the Pilibhit talisil, consist of two systems, drawn from the Bahgul and Kailas, both of which are small streams. ordinary years arrigation is not necessary, and small temporary wells can be made wherever required, except in the sandy tracts of Püranpur. In the Bisalpur talisil the supply from wells is regularly supplemented by a defective and wasteful private arrangement of dams on the small streams which traverse that area, especially on the Mālā swamp. The minor rivers are similarly used in the Pilibhit and Paranpur tahsels in seasons of drought. Water is generally raised in earthern pots suspended from a lever (dhenkli), as the spring-level is high,

The 'reserved' forests of Pilibhit District cover 149 square Forests. miles, and are included, with some forest lying in Naint Tal District, in the Pilibhit Forest division. They lie on both sides of the Mala swamp and south-west of the Chauka. The forests are forming an area shaped like a horseshoe. the poorest in the Province, and are chiefly valuable for the grazing they afford, and the products used by the inhabitants of the neighbourhood. Sal (Shorea rehusta) and haldu (Adina cordifolia) are the most valuable trees; but many years must clapse before timber of value is produced. About 64 miles are occupied by similar forests belonging to private persons in the

Püranpur talisil, and 44 miles in the south-of Bisalpur are covered with jungle, chiefly duāk (Buten frondesu).

Arts and manufacturés. Sugar-refining is the most important industry. Boat-building and wood-carving were formerly carried on largely; but the carpenters have now turned their attention to cart-making. There is a small manufacture of hempen bags and metal vessels, and cutton-weaving is carried on, but chiefly for local supply. Catechu is prepared in the north of the District.

Commetce.

The staple exports are wheat, sugar, and rice. In the last few years a flourishing export trade in hemp has spring up. The finer varieties of rice grown in the rich lowlands of Nepšl are exported through this District, and there is also a considerable trade in hill produce, such as borax, pepper, and ginger. Neoria, Bisalpur, and Püranpur are the principal trade centres, outside the head-quarters town.

Railways and roads.

The Lucknow-Stapur-Bareilly metre-gauge railway passes across the centre of the District, and a branch is contemplated from Pillbhit town to Tanakpur, the great mart at the fact of the Kumaun hills. Pillbhit is very badly provided with roads, and the northern and eastern parts are almost impassable, except by elephants, during the rainy season. There are 13 miles of metalled roads from Pillbhit towards Bareilly, and 299 miles of unmetalled roads. The absence of kankar or nodular limestone is the chief cause of the want of better roads. Avenues of trees are maintained along \$4 miles.

Famine.

The natural moisture of the soil is generally sufficient to protect the District from the extremity of famine, and excessive rain is more to be feared than drought. In the saudy tracts in the east and south, however, where wells cannot be made, drought affects the people. Large remissions of revenue were made in 1825-6, and the famine of 1837-8 was felt. Details of later famines are not available till that of 1868-9, when Rs. 43,000 was spent on relief, and large advances were made for seed and bullocks. The famine of 1877-8 caused some distress and the revenue demand was reduced. In 1896-7 scarcity was again felt, but liberal advances were made and the District recovered rapidly.

District

The Collector is ordinarily assisted by two Deputy-Collectors recruited in India, and a *talefildar* resides at the head-quarters of each *talefil*. An officer of the Forest department is stationed at Pilibhit, while the canals are part of the Rohilkhand Canals under an officer at Bareilly.

Civil justice and trime.

Pilibbit is included in the Civil and Sessions Judgeship of Bareilly, and there is one District Munsif. Crime is usually light,

'At annexation, in 1801, Pilibhit was included in the large Land District of Bareilly. From 1833 to 1842 part of the area now revenue forming Pilibhit was included with other taksils in a District tration, called North Bareilly. A subdivision was then created, consisting of Pilibhit, Püranpur, and other territory, which became a separate District in 1870. In 1880 the Bahen tahsil was restored to Bareilly, and the Bisalpur tahsil added to Pulibhit. The early settlements were thus made as part of BARRILLY DISTRICT, to which reference may be made for the methods followed. The demand fixed at the first regular settlement under Regulation IX of 1833 on the present area was 5-9 lakhs. At the next settlement, between 1865 and 1872, the Bisalpur talisil was treated as part of Bareilly District, and the Pilibhit and Puranour talisils were settled separately. revenue was raised to 7.2 lakhs; but a succession of bad years caused reductions to be made, and part of the District has since been under a system of short settlements. The Bisalpur talisil was again settled in 1902 together with Bareilly District, the revenue being mised from 3-1 to 3-3 lakhs; but the revision of settlement in the other two taksils has been postponed for ten years. In 1902-3 the incidence of revenue was R. 1 per acre, varying from 5 annas in Puranour to Rs. 1.5 in Pilibhit.

The total collections on account of land revenue, and revenue from all sources, have been, in thousands of rupees:—

-	1880-1.	1890-1.	1900-1	1903-4.
Land revenue Total revenue	7,18 9,24	7,01 9,81	7,39 10,52	7,11

There are two municipalities, Pilimir and Bisalpur, and Local self-three towns are administered under Act XX of 1856. Beyond government. the limits of these, local affairs are managed by the District board, which had an income of Rs. 72,000 in 1903-4, chiefly derived from rates. The expenditure was Rs. 79,000, including Rs. 40,000 on roads and buildings.

The District Superintendent of police has a force of Police and 3 inspectors, 55 subordinate officers, and 221 men, distri. jalla, buted in 9 police stations. There are also 109 municipal and town police, and 1,066 village and road police. Up to 1902 convicts were sent to the Bareilly District jail; but a jail has now been built, which contained a daily average of 48 prisoners in 1903.

Pilibhit occupies a medium place as regards the literacy of Education. its population, of whom 2-3 per cent. (4 males and 0-2 females)

could read and write in 1901. The number of public schools rose from 62 with 2,124 pupils in 1880-1 to 77 with 3,066 pupils in 1900-1. In 1903-4 there were 107 public schools with 4,289 pupils, of whom 238 were girls, besides 45 private schools with 667 pupils, including 46 girls. Three of the schools were managed by Government, and 87 by the District and municipal boatds. The total expenditure on education in 1903-4 was Rs. 27,000, chiefly met from Local funds.

Hospitals and dispentaxes. There are 5 hospitals and dispensaries, with accommodation for 66 in-patients. About 52,000 cases were treated in 1903, of whom 777 were in-patients, and 1,100 operations were performed. The expenditure was Rs. 10,000, chiefly from Local funds.

Vaccina-

In 1903-4, 21,000 persons were vaccinated, giving the high proportion of 45 per 1,000 of the population. Vaccination is compulsory only in the municipalities.

[Settlement Report of Pilibhit (1873); Bareilly District Gasetteer (1879, under revision); Assessment Report, Tahsil Bisalpur (1902).]

Bisalpur Tahsil.—Southern tahsil of Pilibhit District. United Provinces, conterminous with the pargana of the same name, lying between 28° 6' and 28° 32' N. and 70° 42' and 80° 2' E., with an area of 363 square miles. Population ! increased from 190,854 in 1891 to 196,333 in 1901. Thereare 424 villages and two towns, including Bisalpun (population, 9,85r), the tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 3,25,000, and for cesses Rs. 53,000. The density of population, 541 persons per square mile, is the highest in the District. Three considerable rivers, the Deoha, Kaina, and Khanaut, and a number of smaller streams flow from north to south, and are dammed and used forirrigation, especially the upper course of the Katna, which, masses through the Mala swamp. In 1903-4 the area under cultivation was 241 square miles, of which 84 were irrigated, mostly from wells.

Pilibhit Tahsil.—North-western tahsil of l'ilibhit District, United Provinces, comprising the pargunas of Pilibhit and Jahānābād, and lying between 28° 29' and 28° 53' N. and 79° 37' and 80° 3' E., with an area of 474 square miles. Population fell from 199,039 in 1891 to 184,922 in 1901. There are 390 villages and three towns, including Pilibuit (population, 33,490), the District and tahsil head-quarters. The demand for land revenue in 1903-4 was Rs. 3,03,000, and for

cesses Rs. 50,000. The density of population, 390 persons per square mile, is considerably above the District average. The Deohā and Katnā and many smaller streams traverse the tahsīl, and in the west two canals from the Bahgul and Kailās irrigate a small area. A long swamp, called the Mālā, forms the eastern boundary, fringed by a sāl forest. In 1903-4 the area under cultivation was 240 square miles, of which 37 were irrigated. In dry years temporary wells can be made readily, and the rivers are also used.

Puranpur Tahsil.—North-eastern tahsil of Pilibhit District, United Provinces, conterminous with the pargana of the same name, lying between 28° 21' and 28° 50' N. and 70° 56' and 80° 27' E., with an area of 513 square miles. Population fell from 95,205 in 1891 to 89,084 in 1901. There are 242 villages, but no town. The demand for land revenue in 1903-4 was Rs. 93,000, and for cesses Rs. 15,000. density of population, 174 persons per square mile, is very This taksil forms one of the most backward tracts in the United Provinces. Along or near the north-eastern border the SARDA forms the Nepal frontier, and is joined by the Chaukā, which has a channel roughly parallel to that of the Sarda. The Mala swamp divides Paranpur from the Phibhit tahsil, and a stunted forest forms a horseshoe-shaped border round three sides of the tahsil. The central portion consists of a sandy plain, which easily falls out of cultivation; and the whole aren is distinguished by its unhealthiness, the poverty of its inhabitants, the scarcity of cultivators, and their readiness to migrate. Since 1883 many villages have been subject to a light assessment revised every year, or every five years, according to the instability of cultivation. In 1903-4 the area under cultivation was only 178 square miles, of which 18 were irrigated.

Bīsalpur Town.—Head-quarters of the tahsil of the same name in Pilibhit District, United Provinces, situated in 28° 18' N. and 79° 49' E., 23 miles south of Pilibhit town. Population (1901), 9,851. It is said to have been founded by one Bīsū, Ahīr, in the reign of Shāh Jahān, and a fort was built here during the rule of the Robillas. The town is merely an overgrown agricultural village, surrounded on all sides but the south by groves. The centre is occupied by a good market-place, where four roads meet, and brick bouses are increasing in number. The chief public buildings are the municipal hall, tahsili, dispensary, and school. Bīsalpur has been a municipality since 1862. During the ten years ending 1901 the

income and expenditure averaged Rs. 6,000. The income in 1903-1 was Rs. 12,000, chiefly from octroi (Rs. 7,000); and the expenditure was Rs. 10,700. Trade is largely local, and consists in the collection of sugar and grain. The municipality maintains one school and aids two others, attended by 230 pupils.

Dewal.—Village in the Bisalpur tahsil of Pilibhit District, United Provinces, situated in 28° 25' N. and 79° 56' E. It lies on the western bank of a small channel called the Khawā or Katnī, which unites the Katnā to the Khawat river, and on the opposite bank are situated two other villages, called Deoriā and Garh Gājana. An inscription found here, dated in A.D. 992, records the building of temples by a prince named Lalla of the Chhinda line; and the neighbourhood contains several mounds covering the remains of the city of Mayata mentioned in the inscription. The Katnī appears to have been dug as a canal by the same prince.

Pilibhit Town.—Head-quarters of the District and takeil of the same name, United Provinces, situated in 28° 38' N. and 79° 48' E., on the Lucknow-Sitapur-Bareilly Railway. Population (1901), 33,490. The name is derived from Periya, the title of a Banjara clan, and bhit, a 'wall' or 'mound.' It has no history till the middle of the eighteenth century, when it became the residence of Häfiz Rahmat Khān, the Rohilla leader. In 1763 he surrounded it with a mud wall, and six years later with a brick wall. For a time Pilibhit was called Hāhzābād, after the title of the great soldier. The town never rose to the importance of Barcilly; and after the defeat and death of Hafiz Rahmat Khan in 1774 it declined under the rule of Oudh, and under the British, to whom it was ceded in 1801. At the time of the Mutiny in 1857, Pilibhit, though it had been the capital of a District from 1833 to 1842, was the head-quarters of a subdivision. The Joint Magistrate was compelled to retire to Naint Tal, and the town was the scene of constant disturbances, though nominally subject to the rebel governor of Bareilly.

Pilibhit is almost surrounded by water. It lies between the Deohā and Kākra, which were formerly connected by ditches still forming drainage channels, though not constantly filled. A fine mosque built by Hāfiz Rahmat Khān, in imitation of the Jāma Masjid at Delhi, is the chief ornament of the town. The public buildings include the District courts, male and female dispensaries, a clock-tower, a Sanskrit school,

and a Turkish bath. The houses are largely built of brick, and there are several good market-places lined with shops. Besides the ordinary District staff, a Forest officer resides at Plithhit, and there is a branch of the American Methodist Mission. The municipality was constituted in 1865. During the ten years ending 1901 the income and expenditure averaged Rs. 46,000 and Rs. 45,000 respectively. In 1903-4 the income was Rs. 76,000, including octroi (Rs. 35,000) and rents (Rs. 22,000); and the expenditure was Rs. 71.000. A revised drainage scheme has lately been carried out. The trade of the town is largely concerned with the agricultural produce of the District, wheat, rice, sugar, and hemp forming the chief exports. In addition, Pilibhit is an important dépôt for the produce of Nepăl and the Himalayas. Carts and bedsteads are largely made and exported. The municipality maintains eight schools and aids four others, attended by 724 pupils.
